	<i>List of contributors</i>	page vi
	<i>Foreword: The future of drug discovery and healthcare</i> by Eric E. Schadt	viii
	<i>Acknowledgments</i>	xii
1	The art and science of the drug discovery pipeline William T. Loging	1
2	Computational approaches to drug target identification Thomas B. Freeman and Pek Lum	17
3	Understanding human disease knowledge through text mining Raul Rodriguez-Esteban	47
4	Integrating translational biomarkers into drug development Jonathan Phillips	63
5	Computational phenotypic assessment of small molecules in drug discovery William T. Loging and Thomas B. Freeman	94
6	Data visualization and the DDP process Ke Xu	114
7	Information visualization – important IT considerations Telmo Silva	137
8	Example of computational biology at the new drug application (NDA) and regulatory approval stages William T. Loging, Marilyn Lewis, Bryn Williams-Jones, and Roy Mansfield	155
9	Clinical trial failures and drug repositioning Mark Crawford and Jeff Handler	171
	<i>Appendix I: Additional knowledge-based analysis approaches</i> Raul Rodriguez-Esteban	182
	<i>Appendix II: Open source tools and public data sources</i> Yirong Wang and William T. Loging	221
	<i>Index</i>	227
