

## Contents

<i>Preface</i>	<i>page</i> xiii
<b>1 Dimensional dreams</b>	<b>1</b>
1.1 Space: a historical view	1
1.2 An extra dimension	3
1.3 Non-abelian generalisations	6
1.4 Higher-dimensional supergravity	7
1.5 Superstrings	9
<b>2 The Standard Model and beyond</b>	<b>12</b>
2.1 The structure of the Standard Model	12
2.2 Quantum Electrodynamics	12
2.3 Quantum Chromodynamics	13
2.4 Electroweak theory	16
2.5 Beyond the Standard Model	26
<b>3 The birth of compact dimensions</b>	<b>33</b>
3.1 A fifth dimension	33
3.2 Kaluza-Klein modes	34
3.3 Kaluza's theory	35
3.4 Klein's reformulation	37
3.5 Zero modes	40
3.6 Multiple compact dimensions	42
<b>4 String theory: a review</b>	<b>45</b>
4.1 Historical prelude	45
4.2 Bosonic strings	46
4.3 Superstrings	52
4.4 String amplitudes	56
4.5 Anomaly cancellation	60
4.6 Heterotic string	62
4.7 Calabi-Yau and orbifold compactification	65
4.8 Dualities in string theory	69
4.9 D-branes	74

x	<i>Contents</i>	
4.10	D-branes as BPS solitons	76
4.11	The AdS/CFT correspondence	77
<b>5</b>	<b>Effective theories</b>	86
5.1	Introduction	86
5.2	The basics of effective field theories	88
5.3	Effective theory for a brane Universe	93
5.4	Domain walls as branes	95
<b>6</b>	<b>Large extra dimensions</b>	98
6.1	A new paradigm	98
6.2	Confinement of Standard Model fields	102
6.3	Phenomenological consequences	105
6.4	Linearised gravity	107
6.5	Linearised gravity in the ADD framework	111
6.6	ADD Feynman rules	117
<b>7</b>	<b>Visible towers of invisible gravitons</b>	123
7.1	Graviton processes	123
7.2	Summing over KK modes	126
7.3	Graviton emission processes	129
7.4	Graviton emission with an associated photon	130
7.5	Graviton emission in four-fermion and other processes	133
7.6	Constraints on the mass scale of bulk gravity	136
7.7	Graviton exchange processes	137
7.8	Dilepton production	137
<b>8</b>	<b>Making black holes</b>	143
8.1	Introduction	143
8.2	Black holes in four dimensions	143
8.3	Black holes in the ADD model	150
8.4	Experimental searches	160
<b>9</b>	<b>Universal extra dimensions</b>	165
9.1	Compactification on a line segment	165
9.2	Chiral fermions in a five-dimensional theory	168
9.3	The UED mass spectrum and couplings	172
9.4	Fixing the cut-off	177
9.5	Constraints on the mUED model	180
9.6	Beyond mUED	189
<b>10</b>	<b>Warped compactifications</b>	192
10.1	Introduction	192
10.2	A warped extra dimension	193

<i>Contents</i>		xi
10.3	Bulk fields	197
10.4	Bulk gravitons	206
10.5	Holography on a segment	213
10.6	The holographic basis	222
10.7	Conclusions	229
<b>11</b>	<b>Graviton resonances</b>	<b>231</b>
11.1	Introduction	231
11.2	Graviton masses and lifetimes in the RS model	233
11.3	Emission of graviton WIMPs	236
11.4	Exchange of graviton WIMPs	240
11.5	Dilepton production	240
11.6	Distinguishing RS signals from ADD signals	241
11.7	Graviton resonances at the LHC	243
<b>12</b>	<b>Stability of warped worlds</b>	<b>244</b>
12.1	Goldberger-Wise mechanism	244
12.2	Radion couplings and decay modes	255
12.3	Constraining the $M_\Phi$ - $\Lambda_\Phi$ plane	259
<b>13</b>	<b>Exploring the bulk</b>	<b>265</b>
13.1	The motivation	265
13.2	Building a bulk Standard Model	266
13.3	Bulk Standard Model in the dual picture	270
13.4	Electroweak precision constraints	273
13.5	Collider phenomenology	280
13.6	Composite Higgs	288
<b>14</b>	<b>Epilogue</b>	<b>290</b>
14.1	The last waltz	290
14.2	Neutrinos in extra dimensions	290
14.3	Extra dimensions and Grand Unified Theories	292
14.4	Randall-Sundrum II	293
14.5	Supersymmetry in the bulk	294
14.6	Brane-world cosmology	296
14.7	Intersecting brane models	297
14.8	Deconstruction	299
<b>Appendix A</b>	<b>General Relativity in a nutshell</b>	<b>301</b>
<b>Appendix B</b>	<b>Testing the inverse-square law</b>	<b>307</b>
	<i>References</i>	312
	<i>Index</i>	325
