Introduction
Paula J. Durlach and Alan M. Lesgold .......................... 1

PART I: ADAPTIVE TRAINING TECHNOLOGY

1. Adaptive Educational Systems
Valerie J. Shute and Diego Zapata-Rivera ......................... 7

2. Adaptive Expertise as Acceleration of Future Learning: A Case Study
Kurt VanLehn and Min Chi ...................................... 28

3. Adaptive Hypermedia for Education and Training
Peter Brusilovsky .................................................. 46

PART II: STUDENT MODELING BEYOND CONTENT MASTERY

4. Progress in Assessment and Tutoring of Lifelong Learning Skills: An Intelligent Tutor Agent that Helps Students Become Better Help Seekers
Vincent Aleven, Ido Roll, and Kenneth R. Koedinger ............ 69

5. Student Modeling and Intelligent Tutoring Beyond Coached Problem Solving
Cristina Conati .................................................... 96
vi 

CONTENTS

6. Emotions during Learning with AutoTutor
   Sidney D’Mello and Art Graesser

7. Lifelong Learner Modeling
   Judy Kay and Bob Kummerfeld

PART III: EXPERIENTIAL LEARNING AND ILL-DEFINED DOMAINS

8. Training Decisions from Experience with Decision-Making Games
   Cleotilde Gonzalez

9. Adaptive Tutoring Technologies and Ill-Defined Domains
   Collin Lynch, Kevin D. Ashley, Niels Pinkwart, and Vincent Aleven

10. Individualized Cultural and Social Skills Learning with Virtual Humans
    H. Chad Lane and Robert E. Wray

11. Emergent Assessment Opportunities: A Foundation for Configuring
    Adaptive Training Environments
    Phillip M. Mangos, Gwendolyn Campbell, Matthew Lineberry,
    and Ami E. Bolton

12. Semantic Adaptive Training
    John Flynn

PART IV: NATURAL LANGUAGE PROCESSING FOR TRAINING

13. Speech and Language Processing for Adaptive Training
    Diane Litman

14. The Art and Science of Developing Intercultural Competence
    W. Lewis Johnson, LeeEllen Friedland, Aaron M. Watson, and Eric A. Surface

PART V: CULMINATIONS

15. Practical Issues in the Deployment of New Training Technology
    Alan M. Lesgold

16. A Model-Driven Instructional Strategy: The Benchmarked
    Experiential System for Training (BEST)
    Georgiy Levenhuk, Wayne Shebilske, and Jared Freeman

17. Exploring Design-Based Research for Military Training Environments
    Marie Bienkowski

18. A Road Ahead for Adaptive Training Technology
    Paula J. Durlach

Index

341
Figures

1.1. Four-process adaptive cycle 
1.2. Communication among agents and learners  
1.3. Overview of technologies to support learner modeling 
2.1. Performance during the second learning period for three types of transfer  
2.2. A taxonomy of assessments of adaptive expertise 
2.3. The Pyrenees screen 
2.4. Results from the first learning period (probability task domain)  
2.5. Results from the second learning period (physics task domain) 
3.1. The key to adaptivity in AEH systems is the knowledge layer behind the traditional hyperspace 
3.2. Links to topics in QuizGuide interface were annotated with adaptive target-arrow icons displaying educational states of the topics 
3.3. A textbook page in InterBook 
3.4. A glossary page in InterBook represents a domain concept 
3.5. When presenting supporting information for a troubleshooting step, ADAPTS uses the stretchtext approach (right): depending on user goal and knowledge, fragments can be shown or hidden; however, the user can override system's selection 
4.1. The Geometry Cognitive Tutor as it looked in 2005 
4.2. An example of a hint sequence, with hint levels sequenced from the general (top) to the specific (bottom) 
4.3. The preferred metacognitive behavior captured in the model 
4.4. Help Tutor message in response to Try Step Abuse and Help Avoidance on an unfamiliar step 
4.5. Help Tutor message in response to Help Abuse (clicking through hints)
FIGURES

4.6. Help Abuse on a familiar step in a later, more complex tutor problem 81
4.7. Help Tutor responses to Help Abuse (using on-demand hints prior to trying the step or using the Glossary) when a step is familiar 82
4.8. Help Avoidance on a familiar step 82
5.1. A physics example (left) presented with the SE-Coach masking interface (right) 99
5.2. SE-Coach prompts for specific types of self-explanation 100
5.3. (a) Selections in the Rule Browser; (b) Template filling 101
5.4. SE-Coach interventions to elicit further self-explanation 102
5.5. EA-Coach problem (left) and example (right) interface 104
5.6. Example-selection process 106
5.7. ACE’s main interaction window 109
5.8. ACE’s arrow unit 110
5.9. ACE’s plot unit 111
5.10. First version of the SE-Coach’s student model 112
5.11. Version of the ACE’s model including eye-tracking information 112
5.12. Tracked gaze shift from equation to plot panel 112
5.13. Results on the comparison of different versions of the ACE model 113
6.1. (a) AutoTutor interface; (b) Sample dialogue from an actual tutorial session, with annotated tutor dialogue moves displayed in brackets 118
6.2. Sensors used in the multiple-judge study 122
6.3. Proportional occurrence of affective states across four studies 124
6.4. Affective trajectory of a student during a learning session with AutoTutor 127
6.5. Observed pattern of transitions between emotions 128
6.6. Sequence of affective states annotated with the text of student or tutor dialogue move when the emotions were experienced 129
6.7. Architecture of affect-sensitive AutoTutor 131
6.8. Synthesized facial expressions by AutoTutor’s animated conversational agent 132
7.1. Overview of architecture of the lifelong learner model middleware infrastructure 143
7.2. Overview of a large learner model 150
7.3. Detail of the preceding screen 151
7.4. Effect of lowering the standard to 10% 153
7.5. Example of focus on “Structure of heart and great vessels” 154
7.6. Visualization of activity by each team member across three media: wiki, version repository, and tickets defining tasks to be done 156
7.7. Subject glossary used to create lightweight ontology 158
7.8. Defining a new concept 159
7.9. Authoring interface for linking concepts from the ontology to learning tasks 160
8.1. Example of a common problem structure studied in behavioral decision-making research 168
8.2. A closed-loop view of decision making 169
8.3. Instance-based learning 172
8.4. The IBLT process 172
9.1. A LARGO screenshot showing a partially completed diagram 194
9.2. An ICCAT screenshot showing student predictions 197
10.1. Expressions of skepticism, anger, umbrage, and defensiveness by ICT virtual humans 210
10.2. Adjustable emotional parameters for virtual humans with emotional models 211
FIGURES

11.1. Proposed framework for emergent assessment opportunities 229
11.2. Effects of scenario elements on prioritization performance by time 232
11.3. Item-characteristic curves for three test scenarios 233
12.1. An ontology is a formal logical description of a set of concepts and relationships about a specific domain 238
12.2. This ontology expands the concepts about a Person to include arbitrary sets of emotions and beliefs 240
12.3. Action Agents produce actions for specific ontologies in response to game activities 241
12.4. Action Agents interpret game actions and provide appropriate responses 242
13.1. The architecture of ITSPOKE 251
13.2. Screenshot during human-computer spoken tutoring dialogue 251
14.1. Meeting with the malek in Operational Dari 263
14.2. A language-instruction exercise on an iPod Touch 264
14.3. An active dialog from the Operational Dari course 265
14.4. Dynamic refresher training lessons 266
14.5. Virtual role-player mission rehearsal scenario 267
14.6. Situated culture methodology 268
14.7. Alelo technology architecture 272
14.8. Conversational virtual human architecture 275
14.9. Time elapsed since last correct attempt and probability of a correct response 281
14.10. Length of target utterance and probability of a correct response 282
15.1. View of simulation environment 291
15.2. Programming a simulated robotic sequence via the schematic interface 292
15.3. Illustration of coaching available 293
16.1. The problem of training and conceptual POMDP solution 305
16.2. An example of POMDP structure 306
16.3. Training sequences for control and POMDP conditions 311
16.4. Pre-test and post-test scores in two experiments 312
16.5. Difference scores for new experiences between treatments and experiments 313
Tables

1.1. Scenarios Represented in the Four-Process Adaptive Cycle  
1.2. What to Adapt  
1.3. How to Adapt  
2.1. Procedure for the Experiment  
2.2. Numbers of Problems for Each Phase of the Experiment  
4.1. Students’ Help-Seeking Behavior During the Intervention  
4.2. Students’ Help-Seeking Behavior Subsequent to the Intervention  
7.1. Roles for the Lifelong Learner Model and Technical Challenges  
10.1. Dimensions of Pedagogical Experience Manipulation  
13.1. Knowledge of Language Needed by NLP Applications  
13.2. Excerpt of Dialogue with Adaptive ITSPOKE  
13.3. Features per Student Turn
