# Contents

<i>List of figures</i>	<i>page</i> vi
<i>List of tables</i>	viii
<i>Acknowledgements</i>	xii
1 Introduction	1
2 Pre-reform labour arrangements	3
<b>Part 1 Economic reform and the rural labour market</b>	
3 The rural agricultural labour market	21
4 Labour arrangements in the rural non-agricultural sector	36
5 The wage gap between the rural agricultural and non-agricultural sectors	58
<b>Part 2 Urban labour market reforms</b>	
6 Urban labour market reform and wage determination	81
7 Ownership structure, labour compensation and labour demand	99
8 Reforming social security	121
<b>Part 3 Rural–urban migration</b>	
9 The impact of rural–urban migration	145
10 Regional wage differentials and information flows	160
11 The two-tier labour market	179
12 Reforming China’s labour market	198

## Figures

2.1	Share of urban employment, 1952–1994	page 5
2.2	Urban average annual real wage level, 1952–1995	9
2.3	Schematic representation of labour allocation, pre-reform rural China	16
2.4	Change in rural <i>per capita</i> real annual income, 1954–1995	18
3.1	Impact of daily wage change on annual labour supply	32
3A.1	Distribution of derived variable ‘daily wage’	35
4.1	Comparison of tenure–earnings profile between the market and non-market groups	53
5.1	Wage gap between agricultural and TVE sectors, 1984–1994	59
5.2	MPL in a dual economy	63
5.3	Production expansion under the assumption of fixed (or limited) substitution	64
5.4	Impact of labour-saving technology on employment	65
5.5	Change in relative price of capital and labour	71
5.6	Impact of labour supply on wage settings	73
5C.1	Change in MPK/MPL ratio using CES production function estimates, 1984–1990	77
6.1	Comparison of experience–earnings profiles	90
6.2	Comparison of experience–earnings profiles, Japan and China	91
6B.1	Experience–earnings profile, state sector, 1990	97
8.1	China’s urban population pyramid, 1994	133
8.2	Prediction of China’s ageing population, 2024	133
9.1	Employment, hidden unemployment and wages, urban formal and informal sectors	150
9.2	Three-sector model and rural–urban migration	151
10.1	Actual and predicted education–earnings profile, an average individual, Jinan	172
11.1	Current job experience–earnings profile	185
11.2	Impact of elimination of labour market distortions on urban employment and wages	188

11.3	Structural change of employment, Hong Kong, 1987–1997	191
11.4	Impact of state sector redundancies on urban employment and unemployment	194

## Tables

2.1	Examples of relative wage grade level for administrative and managerial staff, by regions	<i>page 8</i>
2.2	Changes in rural labour force and sown areas in China, 1952–1995	13
3.1	OLS estimation of household net income equation	27
3.2	Estimated labour supply equation	31
3A.1	Summary statistics of variables used in income equations	35
3A.2	Summary statistics of variables used in labour supply equations	35
4.1	Share of rural industrial sector in rural and total economy, 1978–1995	37
4.2	Ownership structure of TVP in terms of employment, 1984–1995	39
4.3	OLS results of models of wage determination, China's TVP sector, 1985	45
4.4	OLS results of models of wage determination, by occupational groups	46
4.5	Wage determination for piece-rate and time-rate employees	48
4.6	Wage determination for market- and non-market-oriented employees	50
4A.1	Years of schooling corresponding to education level	55
4A.2	Summary statistics of variables	56
4A.3	Statistical characteristics of main variables for workers and staff	57
4A.4	Statistical characteristics for market and non-market groups	57
5.1	Summary statistics of variables, 1984–1990	66
5.2	Estimation of substitutability according to the ACMS relation	68
5.3	Fixed-effect estimation of production functions	70
5.4	Changes in MPK, MPL and MRTS, 1984–1990	70
5.5	Change in employment, capital and capital/labour ratio in TV-owned non-agricultural sector, 1978–1994	72
5B.1	Agricultural returns to labour and TVE wages, 1984–1994	76

5C.1 Fixed-effects estimation of CES production function	76
5C.2 Change in MPK/MPL ratio using CES production function estimation, 1984–1990	77
5D.1 <i>F</i> -tests for functional forms	78
6.1 Change of coverage of contractual employment, state sector, 1985–1995	82
6.2 Changes in the composition of the total wages, state sector, 1978–1995	84
6.3 Wage equation, 1981 and 1987	86
6.4 Comparisons of return to human capital, China and some industrial countries, 1981–1990	89
6.5 Correlation between coefficients. 1981–1987	94
6A.1 Regression results without industrial dummy variables, 1981 and 1987	96
6C.1 Calculated coefficients (Suits' approach), 1981 and 1987	98
7.1 Performance of ownership functions by different Chinese urban firms	101
7.2 Descriptive statistics of variables used in the study, 1985–1992	104
7.3 OLS estimates of firm-level wage equation	106
7.4 Simple correlation coefficient between log average firm level wage, profitability and productivity	107
7.5 Fixed-effects estimations of wage equation	108
7.6 Impact of bonus on labour productivity	110
7.7 Labour demand equation	112
7.8 Descriptive statistics on over-staffing	112
7.9 Distribution of decision-making on dismissal	113
7B.1 Robustness of impact of productivity on wage variation among private firms, OLS estimations	115
7B.2 Robustness of impact of productivity on wage variation among private firms, fixed-effects estimations	116
7C.1 Coefficient difference between fixed- and random-effects estimations	118
7D.1 Estimation using average firm-level wage as dependent variable	119
7E.1 Over-time effect of wage determination, state sector, 1985–1992	120
8.1 Change in number of unemployment benefit recipients, 1987–1995	123
8.2 Share of retirees in total employment, state sector, 1978–1995	125
8.3 Cross-country comparison of unemployment rates, 1984–1994	129

x *List of tables*

8.4	Prediction of pension payments, 1994–2024	134

11.1	Occupational distribution of rural migrants and urban residents in Shanghai, 1995–1996	180
11.2	Wage differentials between urban residents and rural migrants, by occupation	182
11.3	OLS estimation of (11.2)	184
11.4	Blinder decomposition results of wage differentials between urban residents and rural migrants	186
11.5	Actual and predicted earnings, urban residents and rural migrants	187

11.6	Employment/investment ratio, by sector, 1995	192
11.7	OLS results from employment regression	193
11A.1	Detailed occupational distribution for rural migrants	196
11B.1	Summary statistics of variables	197

## *Introduction*

### Purpose of the book

China is in transition from a planned economy towards a market-oriented one. The economic reforms begun in the late 1970s have brought about remarkable economic growth, initially through transformations in the agricultural sector and subsequently through rapid export growth. The proportion of exports in the country's GDP has quadrupled in less than two decades, to 20 per cent in 1997. Whether China can sustain its rapid growth rate will depend heavily on the government's willingness to pursue further internal structural reforms.

Unlike its East European counterparts, economic reform in China has proceeded in a piecemeal manner, with the aim of establishing a 'socialist market economy under state planning'. This goal has been poetically described by China's most influential economist, Chen Yun (1995):

The bird must not be held tightly in the hand or it will die. It should fly, but only within the cage: without a cage, it will just fly away. If the bird is a market economy, then the cage is state planning. Naturally, the size of the cage has to be appropriate.

While the reforms have not been sweeping, partly to avoid socio-political upheaval, keeping 'the bird in its cage' is inherently problematic. Recent economic growth has not been accompanied by significant labour market reforms within state enterprises, which have remained heavily over-staffed and inefficient. This book contends that achieving sustainable economic growth will require a more thorough overhaul of the current labour market arrangements.

This book covers new ground in documenting and analysing institutional changes in the Chinese economy over the last 20 years from a labour market perspective, and offers empirical evidence that further labour market reform is necessary if high growth rates are to continue.

### Plan of the book

---

Prior to the reforms, rural and urban labour arrangements were inefficient and resulted in low productivity in both rural and urban sectors of the economy. Chapter 2 of the book analyses the drawbacks of these pre-existing labour market arrangements, and the remainder of the book is then divided into three parts.

Part 1 examines the impact of rural economic reform on labour markets in rural agricultural and non-agricultural sectors. It describes how economic reform brought about institutional change in the rural agricultural labour market and analyses the changes in labour supply behaviour and income distribution patterns (chapter 3). Emphasis is also given to institutional change in the rural non-agricultural labour market – in particular, employment and wage determination patterns in this sector (chapter 4). Finally, an interesting phenomenon that has emerged in the rural labour market – the widening wage gap between the rural agricultural and non-agricultural sectors – is analysed (chapter 5).

The implementation of urban labour market reforms and the impact of enterprise reform on the urban labour market are studied in part 2. The major reform measures implemented in the urban labour market since the beginning of the economic reform are introduced and their impact on wage determination in the state sector scrutinised (chapter 6). Following this, the impact of the current enterprise ownership structure on the determination of compensation and employment at the enterprise level is investigated (chapter 7). Particular attention is subsequently given to the important issue of necessary and possible paths for reforming China's urban social security system (chapter 8).

Part 3 analyses the unfolding patterns of rural–urban migration since the reforms began. The impact of massive rural–urban migration on China's economic growth is studied through empirical testing of a three-sector model (chapter 9). The issue of how to efficiently allocate migrant labour to regions with varying rates of economic growth is discussed: the main constraint in this regard is found to be a lack of reliable and impartial information about job markets in various parts of China (chapter 10). Finally, emphasis is given to the existing segregation of the rural migrant and urban resident labour markets and the impact of eliminating such segregation on the urban labour market – in particular, on unemployment, hidden unemployment and labour costs (chapter 11).

The book concludes in chapter 12 by providing an overview of its main findings and its contributions toward enriching our understanding of Chinese labour market reform.
