
Index

Notes on the indexing of names: *Animal names* - names of genera and phyla are indexed; common names and names of intermediate-level taxa are not. *Gene names* - individual genes (e.g. *bicoid*) are listed alphabetically, not under 'gene'; names of gene groups (e.g. pair-rule) and of types of genes (e.g. house-keeping) are listed as sub-entries under 'gene'. *Author and place names* - these are not indexed except where they have become part of a phrase (e.g. Von Baer's laws, Ediacaran fauna).
