<i>Preface</i>	<i>page xii</i>
1 Introduction	1
1.1 Transmission of information	1
1.2 A brief historical survey	4
1.3 Point-to-point digital communication	7
1.4 Networks for digital communication	10
1.5 The Fourier transform	12
1.6 Transforms of some useful functions	18
1.7 Gaussian random variables	24
1.8 Circular random processes	26
Problems for Chapter 1	27
2 Baseband Modulation	31
2.1 Baseband and passband channels	31
2.2 Baseband waveforms for binary signaling	32
2.3 Baseband waveforms for multilevel signaling	35
2.4 Nyquist pulses	38
2.5 Eye diagrams	43
2.6 Differential modulation	45
2.7 Binary orthogonal signaling at baseband	47
2.8 M -ary orthogonal signaling at baseband	49
2.9 Power density spectrum of baseband waveforms	52
Problems for Chapter 2	54
Notes for Chapter 2	57

3	Baseband Demodulation	58
3.1	The matched filter	58
3.2	Demodulation of binary baseband waveforms	68
3.3	Error rates for binary signaling	72
3.4	Demodulators for multilevel signaling	77
3.5	Error rates for multilevel signaling	79
3.6	Demodulators for M -ary orthogonal signaling	80
3.7	Error rates for M -ary orthogonal signaling	81
	Problems for Chapter 3	89
	Notes for Chapter 3	93
4	Sequences at Baseband	94
4.1	Intersymbol interference	94
4.2	Decision-feedback demodulation	97
4.3	Searching a trellis	100
4.4	Error bounds for sequence demodulation	107
4.5	Dominant error patterns	112
4.6	Linear equalization	118
4.7	Adaptive equalization	120
4.8	Least-mean-square equalization	122
	Problems for Chapter 4	126
	Notes for Chapter 4	130
5	Passband Modulation	131
5.1	Passband waveforms	131
5.2	Complex baseband waveforms	139
5.3	Passband filtering	142
5.4	Passband waveforms for binary signaling	144
5.5	Multilevel signaling at passband	147
5.6	Power density spectra of passband waveforms	151
5.7	Minimum-shift keying	153
5.8	M -ary orthogonal signaling at passband	159
5.9	Signal space	164
	Problems for Chapter 5	168
	Notes for Chapter 5	175

ix	Contents	
6	Passband Demodulation	176
6.1	The matched filter at passband	176
6.2	Coherent demodulation of binary waveforms	178
6.3	Noncoherent demodulation of binary waveforms	183
6.4	Rayleigh and rician probability distributions	187
6.5	Error rates for noncoherent signaling	192
6.6	Differential phase-shift keying	196
6.7	Demodulators for M -ary orthogonal signaling	200
6.8	Error rates for M -ary orthogonal signaling	202
6.9	Demodulators for M -ary signal constellations	205
6.10	Error rates for M -ary signal constellations	206
	Problems for Chapter 6	211
	Notes for Chapter 6	216
7	Principles of Optimal Demodulation	218
7.1	The likelihood function	218
7.2	The maximum-likelihood principle	220
7.3	Maximum-likelihood demodulation	223
7.4	Maximum-likelihood sequence demodulation	228
7.5	Noncoherent combining of diversity signals	234
7.6	The maximum-posterior principle	240
7.7	Maximum-posterior sequence demodulation	242
	Problems for Chapter 7	248
	Notes for Chapter 7	249
8	Synchronization	251
8.1	Estimation of waveform parameters	251
8.2	Estimation of phase	254
8.3	Recursive phase estimation	257
8.4	Estimation of delay	262
8.5	Carrier synchronization	265
8.6	Recursive carrier synchronization	270
8.7	Symbol synchronization	276
8.8	Block synchronization	284
8.9	Synchronization sequences	291
	Problems for Chapter 8	294
	Notes for Chapter 8	297

x	Contents	
9	Codes for Digital Modulation	299
9.1	Partial-response signaling	299
9.2	Continuous-phase modulation	308
9.3	Trellis codes for digital modulation	317
9.4	Lattices and lattice cosets	330
9.5	Trellis codes on lattice cosets	332
9.6	Differential trellis codes	337
9.7	Four-dimensional trellis codes	341
	Problems for Chapter 9	343
	Notes for Chapter 9	347
10	Codes for Data Transmission	349
10.1	Block codes for data transmission	349
10.2	Codes constructed in a finite field	357
10.3	Decoding of block codes	365
10.4	Performance of block codes	368
10.5	Convolutional codes for data transmission	374
10.6	Decoding of convolutional codes	384
10.7	Performance of convolutional codes	387
10.8	Turbo codes	391
10.9	Turbo decoding	393
	Problems for Chapter 10	394
	Notes for Chapter 10	397
11	Performance of Practical Demodulators	399
11.1	Energy budgets	399
11.2	Channel capacity	403
11.3	Capacity of gaussian channels	408
11.4	Signal impairments and noise	417
11.5	Amplitude uncertainty	418
11.6	Phase uncertainty	422
11.7	Multipath channels and fading	424
11.8	The hardlimiter at baseband and passband	432
11.9	Smooth nonlinearities	444
	Problems for Chapter 11	446
	Notes for Chapter 11	451

Table of Contents

[More information](#)**xi Contents**

12	Secure Communications	453
12.1	The jammer channel	453
12.2	Partial-message jamming	455
12.3	Bandwidth expansion	461
12.4	Direct-sequence spread spectrum	467
12.5	Frequency-hopping spread spectrum	469
	Problems for Chapter 12	473
	Notes for Chapter 12	478
	<i>Bibliography</i>	479
	<i>Index</i>	488
