Ancient Puebloan Southwest traces the evolution of Puebloan society in the American Southwest from the emergence of the Chaco and Mimbres traditions in the AD 1000s through the early decades of contact with the Spanish in the sixteenth century. The book focuses on the social and political changes that shaped Puebloan people over the centuries, emphasizing how factors internal to society impacted cultural evolution, even in the face of the challenging environment that characterizes the American Southwest. The underlying argument is that while the physical environment both provides opportunities and sets limitations to social and political change, even more important evolutionary forces are the tensions between cooperation and competition for status and leadership. Although relying primarily on archaeological data, the book also includes oral histories, historical accounts, and ethnographic records as it introduces readers to the deep history of the Puebloan Southwest.
Case Studies in Early Societies

Series Editor
Rita P. Wright, New York University

This series aims to introduce students to early societies that have been the subject of sustained archaeological research. Each study is also designed to demonstrate a contemporary method of archaeological analysis in action, and the authors are all specialists currently engaged in field research. The books have been planned to cover many of the same fundamental issues. Tracing long-term developments, and describing and analyzing a discrete segment in the prehistory or history of a region, they represent an invaluable tool for comparative analysis. Clear, well organized, authoritative, and succinct, the case studies are an important resource for students, and for scholars in related fields, such as anthropology, ethnohistory, history, and political science. They also offer the general reader accessible introductions to important archaeological sites.
