Successful scientific writing

*Successful scientific writing* is a user-friendly book providing detailed practical guidance to help students and researchers in the biological and medical sciences to communicate their work effectively through the published literature.

This acclaimed step-by-step guide covers all aspects of typescript preparation from first to final draft, including word processor use and electronic database literature services. Abundant examples, practical advice and self-help exercises draw on the authors’ extensive experience with actual typescripts. Uniform typescript format conventions given here are accepted by 500+ journals.

Applicable to a variety of scientific writing contexts in the majority of disciplines, *Successful Scientific Writing* is a powerful tool for improving individual skills, as well as an eminently suitable text for classroom courses or seminars on scientific writing.

**Janice R. Matthews**, a writer and educator with a broad background in the biological sciences, has edited hundreds of scientific research papers in the veterinary and biological sciences, both in university settings and for private industry. She currently owns and operates Scientific Editing Services in Athens, Georgia.

**John M. Bowen** is Emeritus Professor of Pharmacology and Toxicology, former Associate Dean for Research and Graduate Affairs, and former Director of the Veterinary Medical Experiment Station at the University of Georgia.

**Robert W. Matthews** is Professor of Entomology at the University of Georgia where he teaches insect behavior, animal behavior and entomology for teachers. His research specialties are wasps and bees.

The Matthews have worked and written together for over 30 years. Together they have authored eight books and numerous scientific and popular publications. Their current joint enterprise is the WOWBugs Project, an extensive life science curriculum development endeavor.
Successful scientific writing

A step-by-step guide for the biological and medical sciences

Second edition

Janice R. Matthews,
John M. Bowen, and
Robert W. Matthews
Contents

Preface xiii

1 FROM START TO FINISH: THE BIG PICTURE 1–22

Scientific writing begins where research does – with a question 1

Keep the big picture in mind
Periodically assess research progress and direction
Organization is a journey, not a destination
Use many different search strategies
Make it easy to relocate relevant material

The message determines the medium 5

What message do I want to convey?
Which format is most appropriate for my message?
Who will be most interested in my message?
Where should this paper be published?
Evaluate journal suitability and impact
Avoid salami-slicing science

Write and revise systematically 10

Take charge with the Process Approach
Exercise 1–1. Message, format, and audience
Know when to stop
Keep tasks in perspective

Attention to detail: the “final” copy 13

Recheck journal format
Number all pages
Double-check the accuracy of references and attributions
Give the paper its final in-house double review

Submit the typescript for publication 16

Typescript, computer file, or both?
Include a cover letter with the typescript
Make at least three copies, and label everything
Package it carefully and mail it correctly

Back and forth: editorial review 18

What happens at the editor’s office: round one
Deal respectfully with reviewers’ comments
Contents

What happens at the editor’s office: round two

Correct galley proof conscientiously
  Read the proof carefully
  Mark corrections attentively
  Return proof promptly
  Enjoy the fruits of your labor

2 SCIENTIFIC WRITING IN THE COMPUTER AGE 23–52

Conduct an efficient and thorough literature search 23
  Understand the strengths of different communication channels
  Informal channels directly link researchers and literature sources
  Formal channels involve third parties
  Compilations are there to help – use them!
  Consult research bibliographies and research registers
  Locate and use reference databases and abstracting services
  Consult citation indexes and Dissertation Abstracts
  Learn to use keyword search terms and apply Boolean logic
  Plan an effective search strategy
  Handle search results wisely
  Exercise 2–1. Search strategy and Boolean logic

Use the Internet wisely and well 33
  Know how the Internet is structured
  Understand Web addresses
  Know what Gopher is
  Appreciate FTP
  Be aware of telnet
  Learn the differences between subject directories and search engines
  Use broad and inclusive terms to search subject directories
  Prefer narrowly defined and unusual terms with search engines
  Take advantage of advanced search features
  Keep your eyes and mind open to new services
  Keep the Internet in perspective

Use email as a time-saving resource 40
  Pay attention to details in email addresses
  Be civil, circumspect, and courteous
  Make your messages easy to read
  Substitute for italics, if necessary

Use word processing to write more efficiently 43
  Use automatic formatting to save time and ensure consistency
  Create tables without the hassle of setting tabs
  Use special features to handle mathematics
  Use hidden text for notes
Contents

Plan ahead to make revisions easier
Save your work often, and always make backups

Revising with a word processor

- Use special features to revise material easily on the screen
- Resist premature cosmetic work
- Use computerized grammar-checking programs wisely, if at all
- Use a spellchecker but never entrust it with everything
- Exercise 2–2. Grammar and style analysis programs
- Exercise 2–3. Spellcheckers
- Proofread the final version on paper
- Guard your investment

3 Writing the First Draft

Organize and plan the content

- To compile possibilities, consider brainstorming (random topic lists)
- To suggest organization, try clustering (concept maps)
- To assess balance, develop an issue tree
- To develop the paper’s framework, consider an outline

Deal with matters of authorship

- Exercise 3–1. Organizing ideas
- Discuss authorship before starting the first draft
- Agree on the order of authors’ names
- Let authorship guide collaboration, and vice versa

Understand matters of copyright

- Determine whether published material is copyrighted
- Understand “fair use”
- Understand how copyright affects your own publication

Follow standard structure

- Introduction – What is the problem and why should anyone care?
- Materials and Methods – How was the evidence obtained?
- Results – What was found or seen?
- Discussion and Conclusion – What do these findings mean?
- The title – What is the paper about?
- References – Who did what?
- Abstracts and Summaries are different entities
- Attend to the title page, keywords, acknowledgments, and the rest
- Exercise 3–2. Title choices

Approach writing in a way that builds momentum – and keeps it

- Start in the place that makes sense for you
- Minimize distractions any way you can
- Keep the text simple, but somewhat organized
Contents

When really pressed for time, spend more time on the first draft, not less
Write around missing information
Recognize the signs of bogging down
Deal constructively with writer’s block

4 SUPPORTING THE TEXT WITH TABLES AND FIGURES 74–98
Choose visual aids wisely and use them well 74
Is this illustration really necessary?
Choose the illustration that best fits the purpose
Suit the illustration to the audience
Check journal requirements
Make each illustration independent but integral
Label illustrations carefully and completely

Use tables to present complex data or parallel descriptions 78
Word tables and numerical tables have their place
Understand how tables are constructed
Understand basic printers’ terms
Use space efficiently
Draft concise table titles
Help readers make comparisons by organizing tables logically
Avoid grossly oversized tables
Watch the details!

Know when and how to include figures 85
Decide when a figure is appropriate
Make figures both independent and indispensable
Prepare attractive figures, but beware of “glitziness”
Pay attention to size and scale
Write and position legends carefully

Use graphs to promote understanding of numerical results 87
Keep line graphs simple
Limit logarithmic and scatter graphs to professional audiences
Reveal general relationships with bar graphs
Illustrate the relationship of parts to a whole with divided-circle graphs
Let pictographs show numerical relationships in a visually symbolic manner
Keep graphs visually honest

Use documentary illustrations effectively 92
Obtain the best documentation possible
Compose the illustration to help the reader

Use explanatory artwork effectively 94
What is a gazinta?
Guide readers through sequential processes with algorithms
Contents

Use traditional drawings to focus on essentials
Exercise 4–1. Table and figure format choices

5 REVISION STRUCTURE AND STYLE 99–118

Structural changes come first

Is the title accurate, succinct, and effective?
Does the abstract represent all the content within the
allowed length?
Does the introductory material set the stage adequately but
concisely?
Is the rest of the text in the right sequence?
Is all of the text really needed?
Is any needed content missing?
Do data in the text agree with data in the tables?
Are the correct references included?
Exercise 5–1. Revising the first draft
Should any of the tables or illustrations be omitted?
Restructured? Combined?

Revise for clarity

Consider person and point of view
Exercise 5–2. Person and point of view
Pay attention to factors that influence readability
Strive for sentences of about 20 words
Limit average paragraph length
Present ideas in expected word order
Exercise 5–3. Readability
Uncouple long strings of nouns and adjectives
Exercise 5–4. Strings of pearls
Remove unnecessary hedging
Exercise 5–5. Hedging

Revise for brevity

Beware of verbiage
Remove empty fillers
Omit “hiccups” and other needless repetition
Shorten modifying phrases and clauses
Condense figure legends
Exercise 5–6. Revising for brevity

6 CHECKING GRAMMAR AND NUMBER USE 119–140

Check for grammatical correctness

Decide whether active or passive voice is appropriate
Use the active voice unless you have good reason to use
the passive
Check subject–verb agreement
Exercise 6–1. Active and passive voice
Contents

Rewrite sentences with collective nouns and noun phrases
Strings of subjects or verbs require special care
Move misplaced modifiers
Exercise 6–2. Subject–verb agreement
Deal with dangling participles
Exercise 6–3. Dangling participles and other misplaced modifiers
Watch the grammar in comparisons
Grammatical correctness and consistency are important for lists too
Exercise 6–4. Comparisons and lists

Use tense to show the status of the work being discussed
Use present tense when a fact has been published
Use present perfect tense for repeated events
Use past tense to discuss results that cannot be generalized
Use past tense for unpublished results
Use present tense to refer readers to your figures and tables

Treat numbers clearly and sensibly
Conservative rules determine when numbers should be spelled out
Exercise 6–5. Tense use
Know when to combine words and numbers
Do not start sentences with numerals
Prefer Arabic numerals to Roman numerals
Use the SI metric system for measurements and weights
Know how to express very large and very small numbers
Express percentages correctly
Report statistics sensibly and accurately
Use specialized symbols and notations sparingly and with care
Exercise 6–6. Number usage and interpretation

7 Revising for word choice

Recognize and minimize jargon
Watch out for spoken biomedical jargon
Watch -ology word endings
Avoid coining new words, phrases, or usage
Exercise 7–1. Jargon
If you must use computer jargon, use it appropriately

Use the right word
Watch out for commonly misused and confused word pairs
Beware of “which” and “that”
Exercise 7–2. Devil pairs
Exercise 7–3. Which and that
Contents xi

Use bias-free, inclusive language 151
Use language inclusively, specifying only those differences that are relevant
Be sensitive to group labels
Guard against the perception of bias or prejudice
Find alternatives to sexist language
Exercise 7–4. Handling language sensitively
Avoid awkward coinage

Revise for better verb choice 154
Watch out for lazy verbs
Unmask disguised verb forms
Search for warning words
Exercise 7–5. Lazy verbs and verbal nouns

Special tips when writers and readers have different first languages 157
Address second-language English readers effectively
Choose an effective approach when writing English as a second language
Distinguish between count nouns and noncount nouns
Watch use of definite and indefinite articles
Watch gerunds, infinitives, and participles
Understand participle use
Watch verb forms in conditional sentences
Peruse prepositions and prepositional phrases
Watch SVO word order

8 REVISING PUNCTUATION AND OTHER MECHANICS 165–189

Punctuate for clarity 165
Prefer the period
Prevent false joining
Insert commas for clarity and emphasis
Punctuate the elements of series clearly
Identify quoted passages from other texts
Know when not to use quotation marks
Hyphenation rules are complex and changing
Exercise 8–1. Punctuation

Capitalize consistently 172
Recall proper and common names
Capitalize significant words in titles
Check journal requirements
Exercise 8–2. Capitalization

Know how to treat scientific names 175
Capitalize everything but species and variety
Underline or italicize names of the genus, species, and below
Contents

Make the first mention a comprehensive one
Exercise 8–3. Scientific names

Know when and how to include trade names 178
Distinguish carefully between trade names and common names
Substitute generic or chemical names whenever possible
Cite trade names correctly

Watch foreign words and phrases 180
Consider degree of assimilation
Exercise 8–4. Trade names
Prefer English equivalents over Latin and Greek abbreviations
Exercise 8–5. Foreign words and phrases

Minimize abbreviations, acronyms, and other shortened forms 183
Avoid alphabet soup
Distinguish between abbreviations, acronyms, and initialisms
Use approved forms
Define shortened forms at first mention
Pluralize correctly
Watch the names of geopolitical entities
When in doubt, spell it out
Exercise 8–6. Shortened forms

Practicing mixed corrections: a self-test 188

Selected references 190

Appendix 1. Suggested responses to exercises and self-test 195

Appendix 2. Uniform requirements for manuscripts submitted to biomedical journals 207

Index 231
Preface

Mend your speech a little, lest it mar your fortune.

William Shakespeare

The catch phrase “Publish or Perish” – or its more upbeat variant, “Publish and Flourish” – seems to have as much validity as ever in the minds of scientists everywhere. The scientific community has long emphasized quantity and quality of scholarly publications as a way to judge the eminence of scientists. Granting agencies appear to do the same. Scores received by renewal applications for National Institutes of Health funding for research in universities and hospitals have been shown to correlate very strongly with the number of publications resulting from NIH grants. Perhaps it is not surprising that the publication rate of scientific information doubles about every 12 years (Stix, 1994), although few of us will be likely to match the output of a Russian chemist whose scientific productivity over 10 years totaled 948 papers, or about one publication every 4 days!

All this writing . . . Does it really make any difference whether it is good, bad, or ugly? We believe it does, and that it matters a great deal, for words are tools of science no less than numbers are. Research is not complete until it is communicated, and publication in a refereed journal is the fundamental unit of scientific communication. The decision not only to write, but to make the effort to write well, lies at the heart of scientific literacy. To most minds, sloppy scientific writing indicates sloppy thinking, and both are disastrous to research and research reporting.

The published word has remarkable persistence. A sloppily written or prematurely published paper can haunt a scientist to the end of his or her days. Over 30 years ago, an examination of the reasons why research grant applications were turned down showed that 12% of the rejected proposals were not approved because the investigators’ previously published work did not inspire confidence. Despite vast technological advances, there is no reason to expect that scientific writing is any less important today.

Still, we never set out to be writers. Few scientists do. During our graduate training, we learned about statistics, research, experimentation; we were taught to use instruments and techniques we have seldom encountered again. There was never a word of guidance on writing a scientific paper, nor did we notice that
xiv  Preface

this instruction was missing . . . at first. Once our working lives began, we quickly learned that while a plumber can make a comfortable living without writing about his pipes, a scientist’s career is inextricably enmeshed with (some would say enslaved by) the need to write. So, like most scientists, we have stumbled along, learning writing skills by trial and error now and then helped along by a benevolent senior faculty member or a friendly colleague.

Now, as a new millennium begins, we find we have become that senior faculty member and, hopefully, those friendly colleagues as well. This guidebook is one outcome. Its goals are to help you to write effectively and efficiently, just as we would if we could meet with you in person. Because it forms such a major part of almost every scientist’s written communication, the research article in a biological, medical, or veterinary medical journal is the book’s main focus. However, the tips, techniques, and guidelines presented here apply to a variety of other writing contexts, from review articles to the popular press.

The first edition of Successful scientific writing began as a brief manual requested by graduate students and new researchers affiliated with the University of Georgia’s College of Veterinary Medicine, and their colleagues in human medicine and the biological sciences. This second edition has been reorganized and expanded to offer increased guidance, additional examples, and more hands-on exercises.

When you picked up this book, did you fear that it would center on split infinitives, case and tense, and other matters that sound only too much like English Composition class? They will be covered—but we promise this won’t be grammar class revisited. We do not aspire to present you with a comprehensive reference work or stylebook, chock-full of detailed grammatical and stylistic rules and obscure exceptions to them. Where such specialized information might be desirable, we try instead to point you toward relevant resources.

Efficiency and effectiveness include far more than wordsmithing. While good writing seems synonymous with a great deal of revising, rereading, and polishing, we believe that effective scientific writing is not as difficult to accomplish as many people try to make it. We hope to show you how to develop a strong organizational framework for both the task and the document, how to access the literature more effectively, and how to tailor your approach to your individual style. We have shared a potpourri of techniques which have been useful in our own writing—covering aspects as varied as overcoming writer's block, using word processors, and constructing tables and graphs. To illustrate the guidelines and suggestions, we have provided abundant examples and exercises, many of which are based upon actual manuscripts slated for publication in scientific journals in the biological and medical sciences.

Our scientific community is rapidly becoming an international one, and English is becoming a truly global language. New sections in this edition cover using the Internet and email, and special tips when writers and readers have different first languages. Because we are most accustomed to American spelling, grammar, abbreviations, and punctuation, we have usually followed American conventions in these matters. However, we have tried to point out British equivalents or alternatives whenever possible.
Preface

Any book can only do so much, especially in as personal an area as writing. Learning to write skillfully is, always has been, and must continue to be a hands-on experience. However, it needn’t be the random, slow, haphazard process that typically occurs in academic circles. Whether you use this book as an alternative to a formal course in science communication or to complement such a course, we hope that you will find that studying and applying this material increases your awareness of scientific writing style. Our goal is to help ease your approach to the writing which your chosen profession in the sciences will invariably call upon you to do.
