

Index of names

- Adair, Gilbert S. 184, 227
 Alzheimer, Alois 281
 Anaximenes 1
 Anfinsen, Christian B. 166
 Ångström, Anders J. 17
 Anson, Mortimer L. 165
 Archimedes 236
 Aristotle 7, 116, 310
 Arrhenius, Svante A. 76
 Atkinson, Daniel E. 178
- Bernal, John D. 300
 Berzelius, Jöns J. 63
 Black, Joseph 23, 40
 Bloch, Sylvan C. 329
 Bohr, Christian 243
 Bohr, Neils 243
 Boltzmann, Ludwig 196
 Boyle, Robert 11
 Bragg, J. K. 214
 Brahe, Tycho 116
 Briggs, George E. 269
 Brønsted, Johannes, N. 100
 Brown, Adrian J. 268
 Brown, Robert 70
 Buffon, George L. L. de 316
- Carnot, Nicolas L. S. 52, 56, 72
 Changeux, Jean-Pierre 242
 Clausius, Rudolf J. E. 32
 Copernicus, Nicolaus 21
 Coulomb, Charles A. de 157
 Crick, Sir Francis 165, 302
- Dalton, John 185
 Delbrück, Max xiv
 Democritus 185
 Descartes, René 316
 Donder, Théophile de 39
- Donnan, Frederick G. 140
- Eddington, Sir Arthur S. xii
 Einstein, Albert xii, 8, 17, 116
 Euclid 24
 Eyring, Henry 165, 262
- Faraday, Michael 106
 Feynman, Richard P. 185
 Filmer, D. 242
 Fischer, Hermann E. 268
 Fourier, Baron Jean B. J. 329
- Galilei, Galileo 21, 22, 116
 Gamow, Georgy A. 316
 Gauss, Carl F. 236, 238
 Gibbs, Josiah W. 71, 74
 Gilbert, Walter 302
 Guldberg, Cato M. 76
- Haldane, John B. S. 269
 Haller, Albrecht von 316
 Hasselbalch, Karl A. 101
 Heisenberg, Werner K. 64
 Helmholtz, Heinrich 30
 Henderson, Lawrence J. 101
 Hensleit, Kurt 48
 Herschel, Austin 'Bud' xiv
 Hess, Germain H. 33
 Hill, Archibald V. 233
 Huxley, Hugh E. 284
- Jeans, Sir James H. 220
 Joule, James P. 2, 30
- Katchalsky, Ephraim xiv
 Kendrew, John C. 224, 225
 Kepler, Johannes 21, 23, 116
 Kirchhoff, Gustav R. 43
- Koshland, Daniel E. 242
 Krebs, Sir Hans A. 48, 123
- Laplace, Pierre S. de 11, 43
 Lavoisier, Antoine L. 11, 43
 Le Châtelier, Henri L. 95
 Lehninger, Albert L. 124
 Leibniz, Gottfried W. 30
 Lewis, Gilbert N. 85
 Linderstrøm-Lang, Kaj U. 63
 Lifson, Shneior 216
 Lipmann, Fritz A. 123
 Lowry, Thomas M. 100
 Lumry, Rufus 165
- Marcus, Rudolf A. 265
 Maupertuis, Pierre L. 316
 Maxwell, James C. 8, 66
 Mayer, Julius R. von 30
 Mendele'ev, Dmitri I. 185
 Menten, Maud L. 270
 Michaelis, Leonor 269, 270
 Mirsky, Alfred E. 165
 Mitchell, Peter D. 123
 Monod, Jacques L. 242
 Mulder, Gerardus J. 63
 Mullis, Kary R. 159
- Némethy, G. 242
 Nernst, Walther H. 106
 Newton, Sir Isaac 8, 22, 23, 116, 298
 Nobel, Alfred B. 253
 Northrop, John H. 268
- Pauling, Linus C. 165
 Perutz, Max F. 224
 Pfeil, Wolfgang 46
 Phillips, David C. 274
 Planck, Max K. E. L. 2

Subject index

- absolute temperature 27, 63–64
acid 100–102, 363
acidity constant 100, 363
actomyosin 284
actin 281ff
 assay 283, 370
 binding proteins 284
 filament 282–284
 polymerization 27, 283–284
 treadmilling 283, 372
activated complex 263, 363
activation energy (*see energy*)
active site 268ff, 363
active transport 363
activity 85ff, 363
 Coefficient 86, 93, 363
Adair equation 227, 363
adenosine triphosphate xiii, 2, 10, 27,
 104, 112, 121, 123ff, 129–130,
 141–144, 151, 156, 171, 174, 178,
 181–184, 241, 254–255, 261,
 282–283, 285–296, 289, 312, 316,
 363
 synthase 124, 129
aging 66–67, 171, 173, 317ff
allostery 151, 240–242, 363
 heteroallostery 248
 homoallostery 241, 367
Alzheimer's disease 281
amino acids
 chirality of 300
 in meteorites 300
 physical properties of 342
 transfer energetics 161–163
amyloid fibers 136, 280, 281
antibodies 39, 314–315, 363
archaea 303–304
arc repressor 306–307
aromatic compounds 51, 54–55
arum maculatum 55
aspartate transcarbamoylase 241, 251,
 268
association constant 147ff, 225ff, 363
atmosphere 2, 10
ATCase (*see aspartate
 transcarbamoylase*)
ATP (*see adenosine triphosphate*)
autotrophism 363
bacteria 1, 3, 46, 51, 66, 136, 260,
 273–274, 303ff, 317
 anaerobic 303–304
 archaeobacteria (*see archaea*)
 chemosynthetic 1
 cyanobacteria 1
 hyperthermophilic 224
 photosynthetic 3
 sulfate-reducing 303–304, 371
base 100–102, 363
Big Bang 294, 364
binding 144–151, 223ff, 337–339
 capacity 148–149, 364
 constant 147ff, 337–339
 site 147ff, 223ff, 364
bioenergetics 119–129, 364
blood 101, 116, 140, 147, 151, 312
body plan 317–318, 364
Bohr effect 243, 364
Boltzmann
 constant 196
 distribution 192ff, 297, 364
 equation 196
 factor 199–200, 364
boundary 9, 26, 364
breathing motions in proteins 172,
 364
Brønsted–Lowry definitions 100
Brownian motion 191
Brussels School of thermodynamics
 39
buffer 8, 101–102
 ionization constants 345
 buffering capacity 101, 364
C. elegans 322–323
calorie xiv
calorimetry xiv, 11, 40, 46, 277, 335ff,
 364
 bomb 11, 13, 35, 39, 48
 differential scanning 11, 42, 116,
 186, 208ff, 336–337, 365
 isothermal titration 11, 39, 182,
 229–230, 337–339, 367
cAMP (*see cyclic AMP*)
carbon 1, 14, 267ff, 364
 dioxide 2, 3, 34, 43, 45, 80
 monoxide 152
CD (*see circular dichroism
 spectroscopy*)
cells 3, 29, 57, 303
cellulose 2, 121, 136
chemical potential 85–89, 131, 139, 364
 mean 91–92, 368
chemosynthesis 304, 364
chirality 304, 364
chlorophyll 2–3, 17, 268, 300, 364
cholesterol 84, 114
circular dichroism spectroscopy 207,
 279
citric acid cycle 113–114, 122–123, 364
 energetics 346
CMP (*see cytidine monophosphate*)
cold denaturation 182, 364
colligative property 90, 130, 161
collisions 54–55, 188–192
collision theory (chemical kinetics)
 261–262, 364

- combustion 11–12, 34–35, 43, 46, 253
 complexity 25, 64, 314ff
 configuration 195ff, 365
 conformation 37, 197–198, 365
 concentration 133ff
 convection 1, 51, 78
 cooperativity 36, 203, 205–206, 211–212, 234, 365
 counterions 139, 149, 157
 coupling 102–104, 115, 365
 chemical denaturation 161–165, 168–169, 203–204
 creatine 116
 critical concentration 283, 365
 CTP (*see* cytidine triphosphate)
 cyclic AMP 128–129, 156, 312
 cytidine monophosphate 39, 144–146
 cytidine triphosphate 112, 241
 cytochrome *c* 113–114, 120
 cytoskeleton 281ff
- Dalton's law 365
 data analysis 200–204, 238–240
 death (*see* aging)
 degeneracy 197ff, 365
 denaturant 227, 228
 denaturation 200ff
 deoxyribonucleic acid xi, 3, 5
 binding to proteins 223, 224, 241, 314
 charge properties 139, 140
 information storage in 180, 307–308, 314–315
 melting 38, 62, 156–159, 182
 stability 155–161, 183–184
 structure 155, 156
 supercoiling 158–159, 180
 synthesis 299, 302
 tension in 298
 dialysis 136–139, 180
 equilibrium 138–139
 dielectric constant 91
 diffusion 1, 51, 53, 70, 78, 89, 135, 188ff, 365
 facilitated 192, 366
 dissociation constant 147, 225ff, 365
 dissipation 173, 174
 distribution 50, 192ff, 365
 disulfide bond 165, 197–198, 365
 Donnan equilibrium (*see* equilibrium)
 dose–response 147, 148
 DNA (*see* deoxyribonucleic acid)
- Earth 1, 15, 19
 EDTA 91–92
- effector 241, 365
 efficiency 29, 57, 365
 electrostatics 139–144, 157, 164
 electromagnetic spectrum 2, 4
 electromotive force 365
 electron transfer 120–121
 kinetics 265ff
 Marcus theory of 265, 368
 electroneutrality 140, 365
 electroweak interactions 247, 301, 365
 ELISA (*see* enzyme-linked immunosorbent assay)
 endergonic reaction 81, 365
 endothermic reaction 34, 365
 energy xii, 2, 5–6, 8, 11, 14, 16, 19, 59, 293ff, 365
 bond 15, 24
 capture 1–2
 chemical 2, 9, 52
 conservation 43, 365
 dissipation 129–130, 365
 distribution 5–6, 8, 14, 18
 electronic 144
 expenditure 5, 13, 57, 305
 internal 24–26, 49, 73, 79
 isothermally unavailable 60
 kinetic 9, 12, 28, 30, 50, 55, 187
 levels 194, 195
 mechanical 54
 nuclear 25
 of activation 252ff, 261–263, 363
 of non-covalent interactions 37
 potential 9, 30
 profile 252
 requirement 18
 solar 1–2, 8–9, 14
 state 194
 storage 312
 thermal 12, 28, 30, 54–55, 372
 transduction 24, 26, 29, 103, 365
 transformation of 2–5, 12–14, 17–18, 26, 293, 303
 well 166, 365
 yield 12
 enthalpy 32–35, 207, 365
 average 209
 calorimetric 98, 205, 211–212, 364
 change in the standard state 371
 Kirchhoff's law of 42–43, 368
 of activation 264
 of binding 39, 47, 229, 230, 337–338, 365
 of denaturation 38–39, 336, 366
 of hydration 40, 48, 366
 of mixing 86
 van't Hoff 98, 205, 211–212, 372
 enthalpy–entropy compensation 170, 337, 366
 entropy 50ff, 73, 135, 328, 366
 conformational 197–198, 365
 of activation 264
 of denaturation 336
 of the surroundings 59–60
 of the universe 59–60
 production 313
 statistical 196
 total 59
 environment 2, 3, 72
 enzyme 3, 8, 9, 144–146, 174, 267ff
 kinetics 267ff, 272
 linked immunosorbent assay 154–155
 equal *a priori* probability, postulate of 195
 equilibrium 53, 76–81, 93–95, 366
 chemical 251
 constant 93–95, 199, 366
 Donnan 139–140, 142, 365
 dynamic 80, 365
 mechanical 77–78
 multistate 204ff
 thermal 23–24, 27–28, 49, 70, 187, 188
 erectile tissue 84, 284
 ergodic hypothesis 201, 366
 evolution 317, 319ff, 366
 excrement 43, 65
 exercise 18–19
 exergonic reaction 81, 366
 exothermic reaction 34, 56, 58, 366
 extensive property 25
 extremophiles 303–304, 366
 extrinsic property 366
- fertilization 284
 first-order reaction 257–258, 262, 366
 flavin adenine dinucleotide 123–124, 156, 224
 fluctuations 36, 193, 208, 210
 food 2–3, 11–13, 29, 31, 35, 58, 64–65
 force 26, 32, 366
 fossil fuel 14
 fractional saturation 225
 free energy (*see* Gibbs free energy)
 frequency factor 366
 function 366
 linear 17, 203–204, 257–259
 non-linear 203–204
 path 26, 45, 55

- potential 75, 372
thermodynamic (state) 25, 371
- β -galactosidase 241, 312–313
gas constant 34
genetic code 315
genetic landscape 323
Gibbs free energy 23, 32, 51, 60, 71ff, 119ff, 316, 366
 change in the standard state 85
 direction of reaction 74
 of binding 144ff, 225, 245
 of conformational change 165ff, 206–207
 of interaction 212–214
 of transfer 161–163, 372
Gibbs paradox 71
glucose 2–3, 17, 35, 46, 95, 103–104, 113, 121–123, 134–135, 142–143, 179, 313, 366
glycolysis 95, 107, 119ff, 366
grasshoppers 57
gravitation 10, 26, 31, 48, 51, 54
group transfer 127, 366
GTP (*see* guanosine triphosphate)
guanidine hydrochloride 92–93, 227–228
guanosine triphosphate 282
Guinness beer 50
- half reaction 258, 366
heat 11–13, 24, 48, 54, 57, 65, 187, 366
 conversion into work 50, 52
 engine 28–29, 56–58, 69, 367
 latent 368
 of body 3, 290
 sink 29, 55–56, 367
 source 55–56, 367
 transfer 13, 27, 29, 31, 55–57
heat capacity 33, 40–43, 46, 62, 165, 168, 182, 186, 209ff, 336, 366–367
 function 208ff, 336
 α -helix
 Lifson–Roig theory 216–217, 368
 nucleation 215, 369
 propagation 215, 370
 propensity 215–217, 367
 Zimm–Bragg theory 214–216, 372
heme 120, 223, 232, 249
hemoglobin 3, 101, 115–116, 129, 134–136, 140, 151–154, 183–184, 223–224, 231ff, 243
Henderson–Hasselbalch equation 101, 244, 367
Hess's law 367
- hexokinase 104, 268
Hill equation 234, 367
Hill plot 237ff, 367
hydrogen bonds 36–37, 41, 71, 155ff
hydrogen electrode 105, 367
hydrogen exchange 172, 275ff, 367
 EX1 mechanism 276, 366
 EX2 mechanism 276, 366
 intrinsic rate of 276, 366
 calculation of 347ff
 pH-dependence of 276, 278
 protection factor 277, 370
 quenched-flow pulse labeling 277–278, 370
hydrophobicity 161–163, 367
- ideal gas law 28, 133, 367
imidazole 100
information
 actual 310, 363
 biological xiii, 3, 64–66, 151, 299, 311ff, 364
 bit of 310ff, 327, 364
 content 307ff, 327–329, 367
 potential 310, 370
 relation to thermodynamics 309, 313
 theory 307ff, 328, 367
 semantic level of 309–310, 371
inhibition 271ff
 competitive 271ff, 364
 feedback 240–242, 364
 non-competitive 272–273, 291, 369
inhibitor 271ff
insulin 181–182, 223–224
intensive property 25
interaction free energy (*see* Gibbs free energy)
intrinsic property 367
ionic activity (*see* activity)
ionic solutions 90–93
ionic strength 93, 115, 164
ionization 63, 242ff
irreversibility 49, 53, 55, 57, 64–67, 70, 138, 173–174, 297, 367

 sliding filament model 284, 371
 mutations 321–323
 site-directed 339
 somatic 371
 spontaneous 321
m-value 203–204
 MWC model of allostery 242, 369
 myoglobin 224, 231ff, 247, 249
 myosin 27, 284–286
- natural selection 323
 Nernst equation 106, 369
 nerve impulses 27, 40, 51, 57, 142–143
 neuritic plaques 281
 Newton's laws 23, 54
 nipples 84, 309
 nucleation
 of α -helix (*see* α -helix)
 of actin polymerization (*see* actin)
 nutrition 13, 35, 70, 343
 nicotinamide adenine dinucleotide 107, 123ff, 156
 nitroglycerin 253
 nuclear fusion 1, 19, 24
 nuclear magnetic resonance spectroscopy (NMR) 163, 172, 275–277
 number of ways 195, 369
- observable quantity 201ff, 236, 369
 optimization 369
 of enzyme kinetics 306–307
 of protein stability 306–307
 order 3, 59, 71, 305–306, 308, 310ff, 315–316, 369
 osmometry 130ff
 osmosis 256ff, 369
 osmotic work (*see* work)
 osmotic pressure (*see* pressure)
 oxidant 3, 104, 369
- oxidation–reduction 3, 11–13, 33, 183, 253, 370
 redox couple 117, 370
 standard state redox potential 105–106, 371
 oxidative phosphorylation 123ff, 184
 oxygen transport 3, 147, 151ff, 224–225, 231ff
- panspermia 369
 parameter 203–204, 363
 Pascal's triangle 207, 222, 235
 passive transport 369
 path function (*see* function)
 PCR (*see* polymerase chain reaction)
 perfume 51, 188
 pharmacology 146–151
 phase 35, 82–84, 132, 369
 transition 35–36, 42, 74, 82–84, 89–90
 phosphate compounds 300
 phosphoanhydride bond 124–125, 369
 phosphofructokinase 123, 129
 phosphoglycerate kinase 212–214
 phosphoryl transfer 103–104, 150–151
 phosphotyrosine 149–151
 binding domain 226
 photosynthesis 1–3, 14, 17, 108, 119ff, 178, 186, 193–194, 369
 pK_a 188, 244–245
 Planck's radiation law 2, 263, 294
 pollination 55
 pollution 72
 polymerase chain reaction 159–161, 181, 224
 population of states 205–206, 208
 pressure 27–28, 32, 186, 370
 gas 27, 32, 152
 hydrostatic 77
 osmotic 132ff, 184, 369
 process 25, 370
 profilin 284
 protection factor (*see* hydrogen exchange)
- protein
 amino acid composition 164, 363
 antifreeze 90
 breathing motions 36, 123ff, 171–172, 276
 degradation 170–171
 denaturation 38–39, 62–63, 70, 200–217, 227–228, 279
 dielectric 103
 dynamics 171–172, 276
- engineering 170, 339
 local unfolding 368
 misfolding 278ff
 recycling 171, 316
 refolding 279–280, 320
 solubility 163–165
 stability 46–47, 165–171, 182, 212–217, 277, 306–307
 structure 3, 36–37, 163, 172, 214–217, 278–279, 305–306
 synthesis 300–301
 protonation 47, 62–63, 72, 344–345
 proton motive force 123ff, 370
 PTB domain 150, 164
pV-work 32
 pyrimidine synthesis 241
 pyruvate 122
 Pythagorean theorem 24
- quenched-flow pulse labelling (*see* hydrogen exchange)
 rate constant 255–256, 370
 temperature dependence 259–260
 rate-determining step 265, 370
 rate law 370
 rate of reaction 94, 254–255, 370
 reaction kinetics 251ff
 receptor 87, 146–151
 rectangular hyperbola 147, 233, 370
 red blood cells 3, 134–136, 140, 180, 224
 redox (*see* oxidation–reduction)
 reductant 104, 370
 reference state 197, 370
 reproduction 3
 resilin 57
 respiration 370
