 watershed management, and flood plain inundation 134B
 wave height, satellite measurement of 165
 weather 14, 15, 111
 exceptional, in unlikely places 111
 monitoring of 48
 weather balloons 159
 weather and climate 221
 affecting crop growth 178
 on the Internet 157B
 predictions about future extremes 204–5
 weather and climate forecasts, better 31
 weather and climate watch, near-global 30
 weather cycles, consistent, limited evidence 175
 weather derivatives 151
 weather disasters, insurance against 150
 weather forecasting 12, 50, 193, 212
 developing improved models for 82–3
 expansion of meteorological networks for 48
 German, poor, paralysed attack on Moscow 115
 helped allied invasion of Europe 115B
 a problem of mathematical physics 192
 years ahead 174–5
 weather forecasting models 194
 weather phenomena, specific 27b
 weather satellites 17, 57, 83, 220
 database of information about the climate system 164
 development of 157B
 geostationary 157B, 164
 European Geostationary Meteosat 212
 more powerful 212
 orbiting and geostationary 13, 17
 polar-orbiting 157B, 164
 record of tropical storms 21B
 temperature measurements 193B
 weather sensitivity
 and food purchases 182B
 and goods consumption 183
 weather stations
 effects of movement of 49
 with expanded set of instruments 48
 weather systems 220
 chaotic behaviour of 53B
 weather/climate cycles, search for predictable cycles 174
 wildfires, during heatwaves 145, 145
 wind 22, 205B
 buildings damaged by 185B
 wind power 213, 213
 traditional and modern 187
 wind shear
 and hurricane development 65
 in jet streams 46
 wind speed and direction, ocean near-surface, measurement of 165
 winds, hurricane-force, Europe 58B, 59
 winter chill, a killer 35
 winter storms, northern middle latitudes 58–9, 119
 winters 60, 118
 Canada, warmer winters 60
 England, disruptions caused by coldest winters 61B
 USA, cold winters 174
 famous blizzards 59
 late 1970s 119
