Dissecting the Social

Over the past few decades serious reservations have been expressed about the explanatory power of sociological theory and research. In this important book, leading sociologist Peter Hedström outlines the foundations of an analytically oriented sociology that seeks to address this criticism. Building on his earlier influential contributions to contemporary debates, Professor Hedström argues for a systematic development of sociological theory so that it has the explanatory power and precision to inform sociological research and understanding. He discusses various mechanisms of action and interaction and shows how strong links can be forged between the micro and the macro, and between theory and empirical research. Combining new approaches to theory and methodology and using extensive examples to illustrate how they might be applied, this clear, concise and original book will appeal to a broad range of social scientists.

PETER HEDSTRÖM is Professor of Sociology and Official Fellow of Nuffield College, University of Oxford. He is the editor, with R. Swedberg, of Social Mechanisms: An Analytical Approach to Social Theory (Cambridge, 1998) and the author of numerous articles in leading academic journals.
Dissecting the Social

On the Principles of Analytical Sociology

## Figures

2.1 Hypothetical decomposition used to answer the question ‘Why do we observe a gender gap in earnings?’  
2.2 Alternative mechanism definitions  
2.3 Components of a programme explanation  
3.1 Core components of the DBO theory  
3.2 Dyadic interaction between actor $i$ and actor $j$ according to the DBO theory  
3.3 Sources of uniformity within groups of individuals  
3.4 Belief-mediated interactions in coordination problems (adopted from Lewis 1969)  
3.5 Decision tree illustrating a hypothetical choice situation consisting of two possible courses of action, A1 and A2  
4.1 Initial patterns of beliefs, desires and actions in a population of 2,500 actors  
4.2 The structure of social interaction between Ego and Alters  
4.3 Typical patterns of beliefs, desires and actions in a population of 2,500 actors who socially interact with four neighbours  
4.4 Typical patterns of beliefs, desires and actions in a population of 2,500 actors who interact socially with three neighbours and one randomly selected actor  
4.5 Effects on typical actions of two different structures of social interaction  
4.6 Macro-level patterns to be expected under atomistic and non-atomistic decision-making, according to Coleman, Katz and Menzel (1957)  
4.7 Decision situation in collective action problem, according to Åberg (2000)  
4.8 Social outcomes expected in a structurally undifferentiated setting  
4.9 Graph of a hypothetical four-category catnet
List of figures

4.10 Social outcomes in a structurally differentiated setting 96
5.1 Blau and Duncan’s (1967) path model of the process of stratification 103
6.1 Coleman’s micro–macro graph 115
6.2 Unemployment as an endogenous process 122
6.3 Variation in unemployment levels among neighbourhoods that are similar to one another in terms of their unemployment-relevant characteristics 125
6.4 Social and individual components of the outflow from unemployment 127
6.5 Estimated strength of social interaction effects for an average person 130
6.6 Typical action patterns in a population of 2,500 actors who socially interact with four neighbours on the basis of an empirically calibrated action rule 133
6.7 Summary of the results of 5,200 agent-based analyses in which 2,500 agents interact on a lattice (torus) with 50 rows and 50 columns on the basis of an empirically calibrated action rule 134
6.8 Actual and simulated unemployment levels in the Stockholm metropolitan area 139
6.9 Unemployment levels and social interactions in low and high unemployment neighbourhoods in the Stockholm metropolitan area 140
6.10 Effects of social interactions and education on the unemployment level in the Stockholm metropolitan area 141

Preface

In this book I seek to clarify what a mechanism-based explanatory strategy looks like. At the core of the approach is a set of mechanisms that specifies how individuals are influenced by those with whom they interact. Such mechanisms are not only the object of this book, they also explain why the book looks the way it does.

I have benefited greatly from interactions with numerous colleagues in Europe as well as in the United States. First of all I would like to thank Yvonne Åberg. Not only is she the co-author of one of the chapters, she has also served as a constructive discussion partner throughout this book project. Others who have made time to read and comment on the book include Peter Abell, Patrik Aspers, Filippo Barbera, Peter Bearman, Markus Berger, Michael Biggs, Raymond Boudon, Richard Breen, Magnus Bygren, Mohamed Cherkaoui, Christofer Edling, David Freedman, John Goldthorpe, Carl le Grand, Ann-Sofie Kolm, Fredrik Liljeros, Lars Lindahl, Renate Meyntz, Carina Mood-Roman, Krister Segerberg, Mattias Smångs, Ryszard Szulkin, Lars Udehn and Björn Wittrock. I am extremely grateful to you all.

I also have had the great fortune to be affiliated to several excellent academic institutions; the Department of Sociology at Stockholm University, the Swedish Collegium for Advanced Studies in the Social Sciences (SCASSS) and Nuffield College, Oxford. These institutions have allowed me to concentrate on my research for extended periods of time and have provided most stimulating intellectual environments. I am particularly indebted to SCASSS. Without its generous support at the outset of this project, this book would never have been written.

The research reported in the book also has been supported by generous grants from the following research councils: the Swedish Research Council, the Swedish Council for Working Life and Social Research, the Bank of Sweden Tercentenary Foundation and the NEST/Path Finder initiative of the European Community (MMCOMNET).
x Preface

Last but not least I would like to express my gratitude to Sarah Caro, my editor at Cambridge University Press, for her patience and support.
