

Index

- CAPE (Convective Available Potential Energy)
 and deep convection, 217
 definition of, 158
 generation of, in North Atlantic, 219–21
- capillary waves, 56, *see also* celerity, cat's paws
- Carnot cycle
 representation of, 155
 thermodynamic efficiency of, 153
- Carson's law, 107
 and cloud top cooling, 108–10
 and oceanic convection, 110
- cat's paws, 59, 62, *see also* capillary waves
- celerity, 54
 of classical inviscid wave, 55, *see also* capillary waves, gravity waves
 role in wave breaking, 82
- characteristic wave, 12, 65, 68, *see also* windsea
 properties of, 69–70, *see also* wave age
 tail of, 71–2
- Charnock's law, 14
 corrected for buoyancy, 20
 evidence for, 22–5
 limitations of, 25–8
- chimney(s), 99–100, 147
 and plumes, 179
 and pycnostads, 180
 in the North Atlantic, 204–5
- Circumpolar Current
 heat transport by, 200
- Clausius-Clapeyron equation, 149
- clouds
 cumulonimbus, 146
 isolated, 101–2
 liquid content of, 122
 processes in, 101–3, *see also* cloud top cooling
 stratiform, 100–1, 120
 trade cumuli, 116
- cloud top cooling, 108–10, 124
- conservation laws
 with open boundaries, 133–6
- Coriolis parameter
 definition of, 196
- Dalton's law, 149
- deep convection, 99
 CAPE produced by, 217–9
 observations of, 181–2
 oceanic, properties of, 178–81
 preconditioning phase of, 182
- dewpoint depression, 139
- discrete propagation, 164, 165–6
- dissipation method, 9, 22
- Ekman transport, 129, 132, 173, 190
 and heat gain, 196–7
 definition of, 195–6
 in the Southern Ocean, 207–8
- entrainment
 and shear flow, 110–3
 breaker related, 113–5
 definition of, 98, 105
 laws of, 104, 107–10, *see also* Carson's law, Turner-Lofquist law
- entrainment velocity
 caveats, 114–5
 definition of, 105

- entropy production, 3, 5, 34–5, 41–3, 104
 - in hurricanes, 172–5
- equatorial Atlantic
 - heat export from, 213–5
- equatorial upwelling, 129–32
 - role in Atlantic circulation, 212–3, *see also* EUC
- equivalent potential temperature, 115
- EUC (Equatorial UnderCurrent), 130, 132, 211
 - and overturning circulation, 212–3, *see also* equatorial upwelling
- fetch, 12, 66, *see also* windsea
 - and wave age, 69
- friction velocity, 9, 10, 23, 24
 - water-side value, 47
- gas constant
 - of dry air, 149
 - of water vapor, 149
- gas transfer
 - mechanisms of, 87–90
 - surface divergence, 88–9
 - surface renewal, 87
- gravity waves, 56, 61, *see also* celerity
- Great Ocean Conveyor, 210
- heat and vapor transfer
 - mechanisms of, 90–2
 - surface divergence, 91
- Henry's law, 44
- hot tower(s)
 - ascent of air in, 158–60
 - clusters of, 160–4
 - drying out process in, 150–2
 - drying rate in, 163–4
 - origin of term, 146–7
 - updrafts and downdrafts in, 159–64
- hurricanes
 - eyewalls in, 1–2, 167–8
 - mechanical energy gain in, 178
 - MSLP (Minimum Sea Level Pressure) in, 171–2
 - MSW (Maximum Sustained Wind) in, 171–2
 - rainbands in, 169
 - structure of, 1–2, 167–9
 - thermodynamic cycle of, 175–8
 - updrafts and downdrafts in, 170
- instability waves, 51, *see also* Orr-Sommerfeld equation
 - on the air-water interface, 52–3
 - properties of, 56–9
- irradiance, 99
 - absorption of, 125
- ITCZ (InterTropical Convergence Zone), 1, 98
 - annual march of, 215–6
 - hot towers in, 116–7, 120
 - role in overturning circulation, 216
- Keulegan number, 25, 40, 91
- laboratory wind waves, 77–81
 - roller on breaking wave, 81, *see also* roller, wave breaking
 - shear stress distribution, 78
- latent heat, values of, 149
- LCL (Lifting Condensation Level), 98, 101
 - calculation of, 150
- mixed layer budgets
 - atmospheric, 136
 - combined, 137–9
 - in various locations, 140–5
 - oceanic, 136–7
- mixing ratio
 - definition of, 149
 - relationship to specific humidity, 149
- monsoon, source of water vapor for, 194, 197
- NADW (North Atlantic Deep Water), 208
 - upwelling of, 209
- nonequilibrium thermodynamics, 2, *see also* Onsager's theorem, entropy production, laws of general form
 - and buoyancy flux, 41–3
 - and Charnock's law, 15–6
- Obukhov length, 18, 35–6
- oceanic heat gain
 - distribution of, 189–94
 - mechanisms of, 195–7
- oceanic heat transport, 197–203
 - calculation from heat gain, 199–200
 - direct estimation of, 198–9
 - from satellite data, 202
 - global distribution of, 202–3
 - in the Atlantic, 202
- oceanic mixed layer
 - compensation depth in, 125
 - diurnal thermocline in, 125–7
 - structure of, 125–8
- Onsager's theorem, 3, 5–6, 15–6, 34–5, *see also* nonequilibrium thermodynamics
- Orr-Sommerfeld equation, 51, 54–5, *see also* instability waves
- overturning circulation
 - mechanism of, 216–23
 - of the ocean, 208
 - pathways of, 209–11
 - role of tropical Atlantic in, 211–3
- Pathways of air-sea momentum transfer, 92–6
 - long-wave route, 93–5
 - mechanism of, 216–23
 - shear flow route, 95–6
 - shortwave route, 95
- peak downward buoyancy flux, *see also* entrainment, laws of
 - at cloud top, 108–9
 - in the atmospheric mixed layer, 106
 - in the oceanic mixed layer, 110–4

- perfect gas law, 149
- potential temperature, 43, 97
- pseudoadiabatic process
 - energy balance of, 148
 - representation of, 158–9
- pycnostads, 179
 - energy of, 180–1
 - in eighteen degree water, 183, 219–21
 - in Labrador Sea Water, 184–5
- radiant energy flux, 102–3
 - at cloud top, 108–9, 124
 - in the oceanic mixed layer, 125
- roller
 - and capillary waves, 86
 - interaction with wave, 80
 - properties of, 79–81
- saturation pressure, 148
 - variation with temperature, 149,
 - see also* Clausius-Clapeyron equation
- Schmidt number, 46
- sea and swell, 60, *see also* windsea
- significant wave height
 - definition of, 62
 - similarity law for, 65
- specific humidity, 149, *see also* mixing ratio
- squall lines, 164–7
 - flow pattern in, 165–6
 - interaction with troposphere, 166–7
- Stokes drift, 70
 - and growth laws, 70
- stratocumulus, 120
 - structure of mixed layer under, 120–4
- subsidence, 99–100
- surface slope
 - mean square of, 76
 - spectrum of, 75
- thermocline waters
 - and the Circumpolar Current, 209
 - definition of, 206, *see also* WWS
- thermodynamic cycle
 - efficiency of, 157
 - of hurricanes, 175–8
 - of the atmospheric overturning circulation, 152–7
 - of the oceanic overturning circulation, 216–7
 - representation of, 155
- THV (Turbulent Humidity Variance) equation, 104
- TKE (Turbulent Kinetic Energy) equation, 16
 - with buoyancy, 18, 42
 - with changing wind direction, 101
- Toba's law, 68
- Trade Inversion, 97, 116
 - mixed layer structure under, 117–20
- TTV (Turbulent Temperature Variance) equation, 34
- turbulence, 7
 - and buoyancy, 17–20, *see also* Obukhov length
 - convective, similarity theory of, 106–7
 - TKE (Turbulent Kinetic Energy), 7
- Turner-Lofquist law, 111–2
 - and the oceanic mixed layer, 112–3
- upwelling, 99–100
 - coastal, 132
 - equatorial, 129–32
- virtual potential temperature, 97
 - and CAPE, 158–9
- wave age, 12, 26, *see also* windsea
 - and wave properties, 69–70
 - effect of, on Charnock's law 27–8
- wave breaking
 - and fishingline effect, 85–6, *see also* roller and capillary waves
 - criterion of, 82
 - dynamics of, 83–6
- windsea, 10
 - definition of, 61
 - momentum transport by, 70
 - properties of, 11–2
- WWS (WarmWaterSphere)
 - definition of, 187
 - heat and mass loss from, 204
