Preface	xiii
On the Structure of Mathematics	xix
Brief Summaries of Topics	xxiii
0.1 Linear Algebra	xxiii
0.2 Real Analysis	xxiii
0.3 Differentiating Vector-Valued Functions	xxiii
0.4 Point Set Topology	xxiv
0.5 Classical Stokes' Theorems	xxiv
0.6 Differential Forms and Stokes' Theorem	xxiv
0.7 Curvature for Curves and Surfaces	xxiv
0.8 Geometry	xxv
0.9 Complex Analysis	xxv
0.10 Countability and the Axiom of Choice	xxvi
0.11 Algebra	xxvi
0.12 Lebesgue Integration	xxvi
0.13 Fourier Analysis	xxvi
0.14 Differential Equations	xxvii
0.15 Combinatorics and Probability Theory	xxvii
0.16 Algorithms	xxvii
1 Linear Algebra	1
1.1 Introduction	1
1.2 The Basic Vector Space \mathbf{R}^n	2
1.3 Vector Spaces and Linear Transformations	4
1.4 Bases and Dimension	6
1.5 The Determinant	9
1.6 The Key Theorem of Linear Algebra	12
1.7 Similar Matrices	14
1.8 Eigenvalues and Eigenvectors	15

Cambridge University Press

Table of Contents

[More information](#)

viii	<i>CONTENTS</i>
1.9	Dual Vector Spaces 20
1.10	Books 21
1.11	Exercises 21
2	ϵ and δ Real Analysis 23
2.1	Limits 23
2.2	Continuity 25
2.3	Differentiation 26
2.4	Integration 28
2.5	The Fundamental Theorem of Calculus 31
2.6	Pointwise Convergence of Functions 35
2.7	Uniform Convergence 36
2.8	The Weierstrass M-Test 38
2.9	Weierstrass' Example 40
2.10	Books 43
2.11	Exercises 44
3	Calculus for Vector-Valued Functions 47
3.1	Vector-Valued Functions 47
3.2	Limits and Continuity 49
3.3	Differentiation and Jacobians 50
3.4	The Inverse Function Theorem 53
3.5	Implicit Function Theorem 56
3.6	Books 60
3.7	Exercises 60
4	Point Set Topology 63
4.1	Basic Definitions 63
4.2	The Standard Topology on \mathbf{R}^n 66
4.3	Metric Spaces 72
4.4	Bases for Topologies 73
4.5	Zariski Topology of Commutative Rings 75
4.6	Books 77
4.7	Exercises 78
5	Classical Stokes' Theorems 81
5.1	Preliminaries about Vector Calculus 82
5.1.1	Vector Fields 82
5.1.2	Manifolds and Boundaries 84
5.1.3	Path Integrals 87
5.1.4	Surface Integrals 91
5.1.5	The Gradient 93
5.1.6	The Divergence 93

CONTENTS	ix
5.1.7 The Curl	94
5.1.8 Orientability	94
5.2 The Divergence Theorem and Stokes' Theorem	95
5.3 Physical Interpretation of Divergence Thm.	97
5.4 A Physical Interpretation of Stokes' Theorem	98
5.5 Proof of the Divergence Theorem	99
5.6 Sketch of a Proof for Stokes' Theorem	104
5.7 Books	108
5.8 Exercises	108
6 Differential Forms and Stokes' Thm.	111
6.1 Volumes of Parallelepipeds	112
6.2 Diff. Forms and the Exterior Derivative	115
6.2.1 Elementary k -forms	115
6.2.2 The Vector Space of k -forms	118
6.2.3 Rules for Manipulating k -forms	119
6.2.4 Differential k -forms and the Exterior Derivative	122
6.3 Differential Forms and Vector Fields	124
6.4 Manifolds	126
6.5 Tangent Spaces and Orientations	132
6.5.1 Tangent Spaces for Implicit and Parametric Manifolds	132
6.5.2 Tangent Spaces for Abstract Manifolds	133
6.5.3 Orientation of a Vector Space	135
6.5.4 Orientation of a Manifold and its Boundary	136
6.6 Integration on Manifolds	137
6.7 Stokes' Theorem	139
6.8 Books	142
6.9 Exercises	143
7 Curvature for Curves and Surfaces	145
7.1 Plane Curves	145
7.2 Space Curves	148
7.3 Surfaces	152
7.4 The Gauss-Bonnet Theorem	157
7.5 Books	158
7.6 Exercises	158
8 Geometry	161
8.1 Euclidean Geometry	162
8.2 Hyperbolic Geometry	163
8.3 Elliptic Geometry	166
8.4 Curvature	167

x	<i>CONTENTS</i>
8.5 Books	168
8.6 Exercises	169
9 Complex Analysis	171
9.1 Analyticity as a Limit	172
9.2 Cauchy-Riemann Equations	174
9.3 Integral Representations of Functions	179
9.4 Analytic Functions as Power Series	187
9.5 Conformal Maps	191
9.6 The Riemann Mapping Theorem	194
9.7 Several Complex Variables: Hartog's Theorem	196
9.8 Books	197
9.9 Exercises	198
10 Countability and the Axiom of Choice	201
10.1 Countability	201
10.2 Naive Set Theory and Paradoxes	205
10.3 The Axiom of Choice	207
10.4 Non-measurable Sets	208
10.5 Gödel and Independence Proofs	210
10.6 Books	211
10.7 Exercises	211
11 Algebra	213
11.1 Groups	213
11.2 Representation Theory	219
11.3 Rings	221
11.4 Fields and Galois Theory	223
11.5 Books	228
11.6 Exercises	229
12 Lebesgue Integration	231
12.1 Lebesgue Measure	231
12.2 The Cantor Set	234
12.3 Lebesgue Integration	236
12.4 Convergence Theorems	239
12.5 Books	241
12.6 Exercises	241
13 Fourier Analysis	243
13.1 Waves, Periodic Functions and Trigonometry	243
13.2 Fourier Series	244
13.3 Convergence Issues	250

Table of Contents

[More information](#)

13.4	Fourier Integrals and Transforms	252
13.5	Solving Differential Equations	256
13.6	Books	258
13.7	Exercises	258
14	Differential Equations	261
14.1	Basics	261
14.2	Ordinary Differential Equations	262
14.3	The Laplacian	266
14.3.1	Mean Value Principle	266
14.3.2	Separation of Variables	267
14.3.3	Applications to Complex Analysis	270
14.4	The Heat Equation	270
14.5	The Wave Equation	273
14.5.1	Derivation	273
14.5.2	Change of Variables	277
14.6	Integrability Conditions	279
14.7	Lewy's Example	281
14.8	Books	282
14.9	Exercises	282
15	Combinatorics and Probability	285
15.1	Counting	285
15.2	Basic Probability Theory	287
15.3	Independence	290
15.4	Expected Values and Variance	291
15.5	Central Limit Theorem	294
15.6	Stirling's Approximation for $n!$	300
15.7	Books	305
15.8	Exercises	305
16	Algorithms	307
16.1	Algorithms and Complexity	308
16.2	Graphs: Euler and Hamiltonian Circuits	308
16.3	Sorting and Trees	313
16.4	$P=NP?$	316
16.5	Numerical Analysis: Newton's Method	317
16.6	Books	324
16.7	Exercises	324
A	Equivalence Relations	327
