## Contents

### Acknowledgments

**page ix**

1. **Introduction**
   1.1. The Modeling of Computing and Economic Agents
   1.2. Complexity, Mathematics, and Human Capacities
       1.2.1. Complexity and Computability
   1.3. Computing and Economic Organization
   1.4. Chapter Summaries

2. **$\mathcal{F}$ Networks**
   2.1. Graphs and Trees
       2.1.1. The Network Model
       2.1.2. Conditional Branching
       2.1.3. Symmetrical Computation

3. **Networks of Real-Valued Functions**
   3.1. The Leontief Theorem
       3.1.1. Necessary Conditions
       3.1.2. An Example
       3.1.3. Sufficient Conditions
   3.2. Local Conditions
   3.3. Computability in Excess Time

4. **Applications to Economics**
   4.1. Computation with Human Agents
       4.1.1. Example 1: Reading Handwriting
       4.1.2. Example 2: Chernoff Faces
   4.2. Decentralized Mechanisms
   4.3. The Edgeworth Box Economy
       4.3.1. Linear Coordinate Changes in the Message Space
       4.3.2. Linear Coordinate Changes in Parameter Spaces
   4.4. The Efficient Frontier

viii  Contents

5. Applications to Games 95
  5.1. Bargaining Games 95
    5.1.1. Bargaining Games with Quadratic Boundaries 95
    5.1.2. The Kalai–Smorodinsky Solution for Quadratic Boundaries 97
    5.1.3. The Nash Solution for Quadratic Boundaries 99
    5.1.4. Bargaining Games with Cubic Boundaries 103
  5.2. Computational Power and Strategic Advantage 105

6. Lower Bounds and Approximations 111
  6.1. Revelation Mechanisms 111
    6.1.1. Constructions 117
  6.2. Finite Approximations 128
    6.2.1. Lattice Decomposition of $\mathbb{R}^n$ 128
    6.2.2. A Limit Theorem 130

7. Organizations 137
  7.1. Coordination Problems 137
    7.1.1. Costs of Information Processing and Efficient Assignments 140
  7.2. Two Examples 145
    7.2.1. Example 1 145
    7.2.2. Example 2 157
  7.3. A Formal Model 162
    7.3.1. Technology and Production 162
    7.3.2. Efficient Production 164
    7.3.3. Information, Communication, and Coordination 164
  7.4. Structure of Organizations 170
    7.4.1. Larger Organizations 170
    7.4.2. Revised Cost Model 170
    7.4.3. Example 3 171

A Appendix to Chapter 2: Graph Theory 179

B Appendix to Chapter 3: Real-Valued Functions 196
  B.1. Uniqueness Results 197
    B.1.1. An Example 202
  B.2. Leontief’s Theorem 207
    B.2.1. An Example 209
    B.2.2. Example of the General Leontief Theorem in a Low-Dimensional Case 214

C Appendix to Chapter 5: Application to Games 225
