The Self in Neuroscience and Psychiatry

In recent years the clinical and cognitive sciences and neuroscience have contributed important insights to understanding the self. The neuroscientific study of the self and self-consciousness is in its infancy in terms of established models, available data and even vocabulary. However, there are neuropsychiatric conditions, such as schizophrenia, in which the self becomes disordered and this aspect can be studied against healthy controls through experiments, building cognitive models of how the mind works, and imaging brain states. In this, the first book to address the scientific contribution to an understanding of the self, an eminent, international team focuses on current models of self-consciousness from the neurosciences and psychiatry. These are set against introductory essays describing the philosophical, historical and psychological approaches, making this a uniquely inclusive overview. It will appeal to a wide audience of scientists, clinicians and scholars concerned with the phenomenology and psychopathology of the self.

Tilo Kircher is Senior Lecturer and Consultant Psychiatrist at the Department of Psychiatry at the University of Tübingen.

Anthony David is Professor of Cognitive Neuropsychiatry at the Institute of Psychiatry and Consultant Psychiatrist at the Maudsley Hospital, London.
The Self in Neuroscience and Psychiatry

Introduction: the self and neuroscience  
Tilo Kircher and Anthony S. David  

### Part I  
Conceptual background

1. The self and psychiatry: a conceptual history  
   German E. Benios and Ivana S. Marková  
   page 9

2. The self in philosophy, neuroscience and psychiatry: an epistemic approach  
   Georg Northoff and Alexander Heinzel  
   page 40

3. Phenomenology of self  
   Dan Zahavi  
   page 56

4. Language and self-consciousness: modes of self-presentation in language structure  
   Maxim I. Stamenov  
   page 76

### Part II  
Cognitive and neurosciences

5. The multiplicity of consciousness and the emergence of the self  
   Gerard O’Brien and Jonathan Opie  
   page 107

6. Asynchrony, implicational meaning and the experience of self in schizophrenia  
   Philip J. Bamard  
   page 121

7. Self-awareness, social intelligence and schizophrenia  
   Gordon G. Gallup, Jr, James R. Anderson and Steven M. Platek  
   page 147
