Psychonarratology

Foundations for the Empirical Study of Literary Response

Psychonarratology is an approach to the empirical study of literary response and the processing of narrative. It draws on the empirical methodology of cognitive psychology and discourse processing as well as the theoretical insights and conceptual analysis of literary studies, particularly narratology. Psychonarratology: Foundations for the Empirical Study of Literary Response provides a conceptual and empirical basis for this interdisciplinary approach that is accessible to researchers from either disciplinary background. An integrative review of the classic problems in narratology – the status of the narrator, events and plot, characters and characterization, speech and thought, and focalization – is presented. For each area, Bortolussi and Dixon critique the state of the art in narratology and literary studies, discuss relevant work in cognitive psychology, and provide a new analytical framework based on the insight that readers treat the narrator as a conversational participant. Empirical evidence is presented on each problem, much of it previously unpublished.

Marisa Bortolussi is Professor at the University of Alberta and holds a joint appointment in the Departments of Modern Languages and Cultural Studies and of Comparative Literature, Religion, and Film/Media Studies. She is the author of two books on children’s literature and has published articles on contemporary Hispanic literature.

Peter Dixon is Professor of Psychology at the University of Alberta and has published on a wide range of topics in cognitive psychology. A Fellow of the American Psychological Society, he is currently the editor of the Canadian Journal of Experimental Psychology.

1  Introduction  
   - The Study of Narrative  
   - Objectives  
   - Reader-Oriented Literary Studies  
   - Narratology  
   - Discourse Processing  
   - Linguistics  
   - Empirical Research on Literature  
   - Psychonarratology  
   - Summary  

2  Preliminaries  
   - The Domain of Psychonarratology  
   - Features and Constructions  
   - The Statistical Reader  
   - Theory and Explanation  
   - The Textual Experiment  
   - Identifying Meaningful Relationships  
   - Summary  

3  The Narrator  
   - Previous Analytical Concepts of the Narrator  
   - Narrative and Communication  
   - Narrator as Reader Construction  
   - Processing the Narrator  

Identifying with the Narrator 84
Summary 95
4 Events and Plot 97
   Story Versus Discourse 98
   Plot Structure in the Discourse 99
   Plot Structure in the Story 109
   Plot Structure in the Reader 116
   Textual Features for Plot 119
   Reader Constructions for Plot 124

We are very grateful to the Social Sciences and Humanities Research Council of Canada for their support of our psychonarratology project. A special thanks is due to our research assistants and others who have contributed to this research over the years. These include Patricia Hughes-Fuller, Benjamin Berger, Maria Kotovych, Joseph Iyekekpolor, Carmela Bruni-Bossio, Colleen Irwin, Valerie Henitiuk, Kimberly Tannas, Leslie Twilley, and Chuck Anderson.
