**Child Rearing in America**

*Challenges Facing Parents with Young Children*

*Child Rearing in America*, a rich and well-researched volume, comes in the wake of intense national interest in young children. Leading scholars from diverse disciplines use relevant data from The Commonwealth Survey of Parents with Young Children to present a wealth of new information about the lives of families with very young children. They explore how parents spend their time with their children, the economic and social challenges they face, and the supports they receive to improve their children’s health and development. Such a broad portrait based on nationally representative data has not been attempted before.

Drawing on their extensive expertise and research in the issues being addressed, the contributors examine and elaborate on the Survey findings. They synthesize the major themes emerging from the data and consider the family, community, and policy implications to frame and interpret the results. What emerges is a picture of the complex forces that influence families and child-rearing in the early years.

Neal Halfon is Professor of Pediatrics, School of Medicine, and Professor of Community Health Sciences, School of Public Health, at the University of California, Los Angeles, where he serves as Director of the Institute for Children, Families, and Communities.

Kathryn Taaffe McLearn is a Senior Fellow and Research Scientist at The National Center for Children in Poverty, Mailman School of Public Health, Columbia University. For the past seven years she has served as the assistant vice president at The Commonwealth Fund, where she oversaw and co-designed a national pediatric initiative, Healthy Steps for Young Children.

Mark A. Schuster is Associate Professor of Pediatrics, School of Medicine, and Associate Professor of Health Services, School of Public Health, at the University of California, Los Angeles, and Senior Natural Scientist at RAND. He is Director of the UCLA/RAND Center for Adolescent Health Promotion, which conducts community-based research on adolescent health.
