 growth rate 107

- poly(1,3-dioxolane) (*cont.*)
 poly(oxymethylene) copolymers
 spherulite growth rates **263**
 Regime III–II transition **127**
 values of K_1 and K_2 constants **122**
- poly(diphenylmethane diisocyanate)
 poly(ethylene adipate) copolymers
 spherulite growth rates **263**
- poly(epichlorohydrin)
 poly(oxymethylene) copolymers
 spherulite growth rates **263**
- poly(I-RS-epichlorohydrin)
 equilibrium melting temperature
 maximum spherulite growth rate
 137
- poly(R-epichlorohydrin)
 equilibrium melting temperature
 maximum spherulite growth rate
 137
 Regime III–II transition **127**
- poly(S-epichlorohydrin)
 equilibrium melting temperature
 maximum spherulite growth rate
 137
- poly(ether ether ketone)
 Arrami exponent **54**
 deviation of experimental results
 from theory **42**
- poly(ether ether ketone ketone)
 Arrami exponent **54**
- poly(ether imide)
 poly(aryl ether ether ketone) blends
 isothermal crystallization
 peaktime 290
 poly(ether ketone ether ketone
 ketone) blends
 DSC peak time 334
- poly(ether ketone ether ketone ketone)
 poly(ether imide) blends: DSC peak
 time 334
- poly(ether sulfone) blends
 crystallinity levels 333
 DSC peak time 334
- poly(ether sulfone)
 poly(ether ketone ether ketone
 ketone) blends
 crystallinity levels 333
 DSC peak time 334
- polyethylene
 Avrami model compared with
 experimental results 31
 Arrami exponent **53**
 binary blends of molecular weight
 fractions
 crystallization half-time 313–14,
 315
 relative crystallinity 316
 spherulite growth rates 317
 chain length versus ζ^* 82
 cross-linked 276, 278
 crystallinity 28
 crystallite thickness 3–4, 4
 crystallization 7
 crystallization from decalin 413
 crystallization from *n*-hexadecane
 solution 402
 Avrami exponent 397
 transformation extent 392, 393,
 394
 transformation time 399
 crystallization from *n*-octane 413
 face growth rate 407
 crystallization from *p*-xylene 404,
 413
 face growth rate 406
 growth rate against temperature
 415
 crystallization from
 tetrachloroethylene solution
 408

- crystallization from
 α -chloronaphthalene 401, 403
- crystallization kinetics 55
- crystallization under hydrostatic pressure
 crystallization extent 353, 354
 crystallization half-time 356
 lateral growth rates 358
- crystallization under shear
 induction time 373
- dependence of overall crystallization rate on molecular weight 58
- droplet kinetics parameters **147**
- ethylene–butene blends
 crystallization temperature dependence 320
- ethylene–hexene blends
 crystallization temperature dependence 320
- fit of experimental data to Avrami equation 35
- growth rate 105, 107, 119
 experimental fit 120
- growth rate against crystallization temperature 187
- percentage change in crystallization level 217
- plot of crystallinity as a function of molecular weight 40
- poly(butadiene) blends
 crystallization temperature dependence 320
- poly(phenylene sulfide) blends
 crystallization half-time 336
- poly(propylene) blends
 spherulite growth rates 330
- primary nucleation rate 197
- slope ratios versus molecular weight 134–5
- sol and gel fractions 276, 277, 278
- specific volume 1–3, 2
- spherulite growth rates 193, 244
- transformation extent 227
- values of K_1 and K_2 constants **122**
- poly(ethylene adipate)
 equilibrium melting temperature
 maximum overall crystallization rate 139
- fit of experimental data to Avrami equation 34
- poly(1,5-naphthalene diisocyanate)
 copolymers
 spherulite growth rates **263**
- poly(2,4-toluene diisocyanate)
 copolymers
 spherulite growth rates **263**
- poly(diphenylmethane diisocyanate)
 copolymers
 spherulite growth rates **263**
- poly(hexamethyl diisocyanate)
 copolymers
 spherulite growth rates **263**
- spherulite growth rates 10
- poly(ethylene oxide)
 Avrami exponent **53**
 crystallization from toluene 405
 crystallization from tripionin solution
 nucleation rate 420
 crystallization kinetics 55
 crystallization rate against number average molecular weight 190
 crystallization under shear
 crystallinity extent 374
 droplet kinetics parameters **147**
 ethylene–methacrylic acid blends
 spherulite radius 343
- fit of experimental data to derived Avrami equation 36
- free energy of fusion 184

- poly(ethylene oxide) (*cont.*)
 growth rate 107, 116
 experimental fit 117, 121
 growth rate against crystallization
 temperature 183
 interfacial free energy product 197
 plot of crystallinity as a function of
 molecular weight 40
 poly(methyl methacrylate) blends
 spherulite growth rates 291
 theoretical plots 297
 poly(styrene) copolymers
 relative fraction transformed
 against time 252
 poly(vinyl chloride) blends
 spherulite growth rates 330
 poly(*p*-vinyl phenol) blends
 crystallization half-time 290
 spherulite growth rates 191
 styrene–hydroxy styrene blends
 spherulite radius 343
 values of K_1 and K_2 constants **122**
 poly(ethylene succinate)
 equilibrium melting temperature
 maximum overall crystallization
 rate 139
 maximum spherulite growth rate
 137
 poly(ethylene terephthalate)
 Arrami exponent **54**
 crystallization kinetics 56
 effect of additives 157
 equilibrium melting temperature
 maximum overall crystallization
 rate 139
 maximum spherulite growth rate
 137
 exposed to methylene chloride
 vapour
 crystallinity extent 426, 428
 immersion in dioxane
 x-ray diffraction intensity 425
 immersion in nitromethane
 x-ray diffraction intensity 425
 poly(azelate) copolymers
 spherulite growth rates **263**
 poly(butylene terephthalate) blends
 crystallization half-time 309, 310
 crystallization rate constants 307,
 308
 poly(carbonate) blends
 crystallization rate 335
 poly(ether imide) blends
 spherulite radius 342
 poly(phenylene sulfide) blends
 crystallization half-time 336
 Regime III–II transition **127**
 spherulitic growth rates with
 nucleating agents **159**
 poly(ethylene-2,6-naphthalene
 dicarboxylate)
 equilibrium melting temperature
 maximum overall crystallization
 rate 139
 maximum spherulite growth rate
 137
 Regime III–II transition **127**
 poly(hexamethyl adipamide)
 crystallization rate
 hexamethylene terephthalate
 copolymer 230
 poly(hexamethyl diisocyanate)
 poly(ethylene adipate) copolymers
 spherulite growth rates **263**
 poly(hexamethylene adipamide)
 Arrami exponent **53**
 crystallization kinetics 55–6
 equilibrium melting temperature

- maximum overall crystallization rate *139*
- maximum spherulite growth rate *137*
- spherulite nucleation rate *66*
- poly(hexamethylene adipate)
 - Arrami exponent **53**
- poly(hexamethylene oxide)
 - Arrami exponent **53**
- poly(β -hydroxy butyrate)
 - poly(hydroxy propionate) copolymers
 - spherulite growth rates **263**
- poly(hydroxy valerate) copolymers
 - spherulite growth rates **263–4**
- stereo isomer copolymers
 - spherulite growth rates **264**
- poly(3-hydroxy butyrate)
 - cellulose acetate butyrate blends
 - spherulite growth rates *285*
 - spherulite radius *344*
 - growth rate *126*
 - poly(3-hydroxy valerate) copolymers
 - spherulite growth rates *268, 269*
 - Regime III–II transition **127**
- poly(hydroxy ether)
 - poly(ϵ -caprolactone) blends
 - relative fraction transformed *288*
- poly(β -hydroxy octanoate)
 - equilibrium melting temperature
 - maximum overall crystallization rate *139*
- poly(hydroxy propionate)
 - poly(β -hydroxy butyrate) copolymers
 - spherulite growth rates **263**
- poly(3-hydroxy valerate)
 - equilibrium melting temperature
- maximum spherulite growth rate *137*
- poly(3-hydroxy butyrate) copolymers
 - spherulite growth rates *268, 269*
- poly(β -hydroxy butyrate) copolymers
 - spherulite growth rates **263–4**
- Regime III–II transition **127**
- poly(β -hydroxyoctanone) copolymers
 - spherulite growth rates **264**
- polyimides
 - Avrami model
 - Arrami exponent **53**

 - fit of experimental data to Avrami equation *35*
- copolyimides
 - spherulite growth rates *270*
- copolymers
 - spherulite growth rates **263**
- crystallization kinetics *56–7*
- deviation of experimental results
 - from theory **42**
- equilibrium melting temperature
 - maximum overall crystallization rate *139*
 - maximum spherulite growth rate *137*
- Regime III–II transition **127**
- poly(isobutylene)
 - poly(propylene) blends
 - spherulite growth rates *331*
- poly(*cis*-isoprene)
 - crystallization under hydrostatic pressure
 - Avrami rate constant *351*

- poly(*cis*-isoprene) (*cont.*)
 isotherms at different pressures 349
 suposability of isotherms at different pressures and temperatures 350
 equilibrium melting temperature maximum overall crystallization rate 139
 maximum spherulite growth rate 137
 Regime III–II transition **127**
- poly(*trans*-1,4-isoprene)
 crystallization under hydrostatic pressure
 spherulite growth rates 362
- poly(L-lactic acid)
 equilibrium melting temperature maximum overall crystallization rate 139
 maximum spherulite growth rate 137
 Regime III–II transition **127**
 values of K_1 and K_2 constants **122**
- poly(L-lactide)
 copolymers
 spherulite growth rates **264**
- poly(methyl methacrylate)
 equilibrium melting temperature maximum spherulite growth rate 137
- poly(ethylene oxide) blends
 spherulite growth rates 291
 theoretical plots 297
- poly(vinylidene fluoride) blends
 spherulite growth rates 284
 theoretical plots 298
- poly(1,5-naphthalene diisocyanate)
 poly(ethylene adipate) copolymers
 spherulite growth rates **263**
- poly(octamethylene oxide)
 Arrami exponent **53**
- poly(oxetane)
 Avrami model compared with experimental results 31
 deviation of experimental results from theory **42**
- poly(oxymethylene)
 droplet kinetics parameters **147**
 equilibrium melting temperature maximum spherulite growth rate 137
- poly(1,3-dioxane) copolymers
 spherulite growth rates **263**
- poly(dioxepane) copolymers
 spherulite growth rates **263**
- poly(dioxolane) copolymers
 spherulite growth rates **263**
- poly(epichlorohydrin) copolymers
 spherulite growth rates **263**
 Regime III–II transition **127**
- poly(2,2'-*bis*-4,4'-oxyphenyl propane carbonate)
 equilibrium melting temperature maximum overall crystallization rate 139
- poly(pentamethylene terephthalate)
 equilibrium melting temperature maximum overall crystallization rate 139
- poly(1-pentene)
 equilibrium melting temperature maximum overall crystallization rate 139
- poly(phenylene ether ether sulfide)
 equilibrium melting temperature maximum overall crystallization rate 139
 maximum spherulite growth rate 137

- poly(phenylene sulfide)
 Avrami model compared with
 experimental results 33
 Arrami exponent **53**
 crystallinity 29
 equilibrium melting temperature
 maximum overall crystallization
 rate 139
 maximum spherulite growth rate
 137
 fit of experimental data to Avrami
 equation 34
 nonisothermal crystallization 63
 poly(ethylene terephthalate) blends
 crystallization half-time 336
 polyethylene blends
 crystallization half-time 336
 Regime III–II transition **127**
- poly(pivalactone)
 poly(vinylidene fluoride) blends
 spherulite growth rates 286, 287
 theoretical plots 299–300, 302
- poly(propylene)
 crystallization from decalin solution
 transformation extent 396
 crystallization under shear
 nucleation rate 375
 droplet kinetics parameters **147**
 effect of AlOH tertiary butyl
 benzoate 156
 effect of sorbitol compounds 158
 equilibrium melting temperature
 maximum spherulite growth rate
 137
 ethylene–propylene copolymer
 blends
 spherulite diameter 341
 growth rate 132
 growth rate against crystallization
 temperature 188
- isotactic/atactic blends
 spherulite growth rates 323
 spherulite radius growth 337
 overall birefringence change 132
 poly(isobutylene) blends
 spherulite growth rates 331
 polyethylene blends
 spherulite growth rates 330
 Regime III–II transition **127**
- poly(propylene oxide)
 equilibrium melting temperature
 maximum spherulite growth rate
 137
 filler content 155
 Regime III–II transition **127**
- poly(styrene)
 crystallization from benzophenone
 solution
 spherulite growth rates 422,
 423
 crystallization from dimethyl
 phthalate solution 414, 419
 spherulite growth rates 422
 droplet kinetics parameters **147**
 equilibrium melting temperature
 maximum overall crystallization
 rate 139
 maximum spherulite growth rate
 137
 growth rate 125, 128
 isotactic/atactic blends
 growth rate ratios 322
 initial growth rates 340
 spherulite growth rates 321

 normalized intensity maximum
 228
 phase diagram 325
 PPO blends
 spherulite growth rates 327
 Regime III–II transition **127**
- poly(teramethylene isophthalate)
 equilibrium melting temperature
 maximum spherulite growth rate
 137
- poly(tetrachloro-*bis*-phenol-A adipate)
 equilibrium melting temperature
 maximum spherulite growth rate
 137
- poly(tetramethylene isoterephthalate)
 equilibrium melting temperature
 maximum overall crystallization
 rate 139
- poly(tetramethyl-*p*-silphenylene
 siloxane)
 dependence of overall
 crystallization rate on molecular
 weight 58
 poly(dimethyl siloxane) copolymers
 spherulite growth rates 259,
 260–1, **263**
 spherulite growth rates 194
- poly(tetramethylene-*p*-silphenylene
 siloxane)
 equilibrium melting temperature
 maximum spherulite growth rate
 137
 Regime III–II transition **127**
- poly(2,4-toluene diisocyanate)
 poly(ethylene adipate) copolymers
 spherulite growth rates **263**
- poly(trimethylene oxide)
 Arrami exponent **53**
 equilibrium melting temperature
 maximum overall crystallization
 rate 139
- poly(4,6-urethane)
 Arrami exponent **53**
- poly(vinyl chloride)
 poly(ϵ -caprolactone) blends
 spherulite growth rates 292
 poly(ethylene oxide) blends
 spherulite growth rates 330
- poly(vinyl methyl ether)
 poly(styrene) blends
 spherulite growth rates 327
- poly(*p*-vinyl phenol)
 poly(ethylene oxide) blends
 crystallization half-time 290
- poly(vinylidene fluoride)
 poly(1,4-butylene adipate) blends
 isothermal crystallization 305
 spherulite growth rates 304
- poly(butylene succinate) blends
 crystallinity levels 307
 spherulite growth rates 306
- poly(methyl methacrylate) blends
 spherulite growth rates 284
 theoretical plots 298
- poly(pivalactone) blends
 spherulite growth rates 286, 287
 theoretical plots 299–300, 302
