	<i>Preface</i>	page xiii
	<i>Acknowledgements</i>	xviii
<b>1</b>	<b>Introduction to tensors and dyadics</b>	<b>1</b>
1.1	Introduction	1
1.2	Summary of vector analysis	2
1.3	Rotation of Cartesian coordinates. Definition of a vector	7
1.4	Cartesian tensors	11
1.4.1	Tensor operations	14
1.4.2	Symmetric and anti-symmetric tensors	16
1.4.3	Differentiation of tensors	17
1.4.4	The permutation symbol	18
1.4.5	Applications and examples	19
1.4.6	Diagonalization of a symmetric second-order tensor	23
1.4.7	Isotropic tensors	28
1.4.8	Vector associated with a second-order anti-symmetric tensor	28
1.4.9	Divergence or Gauss' theorem	29
1.5	Infinitesimal rotations	30
1.6	Dyads and dyadics	32
1.6.1	Dyads	33
1.6.2	Dyadics	34
<b>2</b>	<b>Deformation. Strain and rotation tensors</b>	<b>40</b>
2.1	Introduction	40
2.2	Description of motion. Lagrangian and Eulerian points of view	41
2.3	Finite strain tensors	43
2.4	The infinitesimal strain tensor	45

viii	<i>Contents</i>	
	2.4.1 Geometric meaning of $\varepsilon_{ij}$	46
	2.4.2 Proof that $\varepsilon_{ij}$ is a tensor	49
	2.5 The rotation tensor	50
	2.6 Dyadic form of the strain and rotation tensors	51
	2.7 Examples of simple strain fields	52
<b>3</b>	<b>The stress tensor</b>	<b>59</b>
	3.1 Introduction	59
	3.2 Additional continuum mechanics concepts	59
	3.2.1 Example	63
	3.3 The stress vector	64
	3.4 The stress tensor	67
	3.5 The equation of motion. Symmetry of the stress tensor	70
	3.6 Principal directions of stress	72
	3.7 Isotropic and deviatoric components of the stress tensor	72
	3.8 Normal and shearing stress vectors	73
	3.9 Stationary values and directions of the normal and shearing stress vectors	75
	3.10 Mohr's circles for stress	79
<b>4</b>	<b>Linear elasticity – the elastic wave equation</b>	<b>84</b>
	4.1 Introduction	84
	4.2 The equation of motion under the small-deformation approximation	85
	4.3 Thermodynamical considerations	86
	4.4 Strain energy	88
	4.5 Linear elastic and hyperelastic deformations	90
	4.6 Isotropic elastic solids	92
	4.7 Strain energy density for the isotropic elastic solid	96
	4.8 The elastic wave equation for a homogeneous isotropic medium	97
<b>5</b>	<b>Scalar and elastic waves in unbounded media</b>	<b>100</b>
	5.1 Introduction	100
	5.2 The 1-D scalar wave equation	100
	5.2.1 Example	103
	5.3 The 3-D scalar wave equation	103
	5.4 Plane harmonic waves. Superposition principle	107
	5.5 Spherical waves	111
	5.6 Vector wave equation. Vector solutions	112
	5.6.1 Properties of the Hansen vectors	115

<i>Contents</i>		ix
5.6.2	Harmonic potentials	116
5.7	Vector Helmholtz equation	116
5.8	Elastic wave equation without body forces	117
5.8.1	Vector $P$ - and $S$ -wave motion	118
5.8.2	Hansen vectors for the elastic wave equation in the frequency domain	119
5.8.3	Harmonic elastic plane waves	121
5.8.4	$P$ -, $SV$ -, and $SH$ -wave displacements	123
5.9	Flux of energy in harmonic waves	125
<b>6</b>	<b>Plane waves in simple models with plane boundaries</b>	<b>129</b>
6.1	Introduction	129
6.2	Displacements	131
6.3	Boundary conditions	134
6.4	Stress vector	135
6.5	Waves incident at a free surface	136
6.5.1	Incident $SH$ waves	136
6.5.2	Incident $P$ waves	137
6.5.3	Incident $SV$ waves	144
6.6	Waves incident on a solid–solid boundary	152
6.6.1	Incident $SH$ waves	152
6.6.2	Incident $P$ waves	157
6.6.3	Incident $SV$ waves	164
6.7	Waves incident on a solid–liquid boundary	168
6.7.1	Incident $P$ waves	168
6.7.2	Incident $SV$ waves	169
6.8	$P$ waves incident on a liquid–solid boundary	169
6.9	Solid layer over a solid half-space	170
6.9.1	Incident $SH$ waves	172
6.9.2	Incident $P$ and $SV$ waves	179
<b>7</b>	<b>Surface waves in simple models – dispersive waves</b>	<b>188</b>
7.1	Introduction	188
7.2	Displacements	189
7.3	Love waves	191
7.3.1	Homogeneous half-space	191
7.3.2	Layer over a half-space	191
7.3.3	Love waves as the result of constructive interference	198
7.3.4	Vertically heterogeneous medium	199
7.4	Rayleigh waves	202

7.4.1	Homogeneous half-space	202
7.4.2	Layer over a half-space. Dispersive Rayleigh waves	206
7.4.3	Vertically heterogeneous medium	209
7.5	Stoneley waves	212
7.6	Propagation of dispersive waves	213
7.6.1	Introductory example. The dispersive string	214
7.6.2	Narrow-band waves. Phase and group velocity	215
7.6.3	Broad-band waves. The method of stationary phase	220
7.6.4	The Airy phase	227
<b>8</b>	<b>Ray theory</b>	<b>234</b>
8.1	Introduction	234
8.2	Ray theory for the 3-D scalar wave equation	235
8.3	Ray theory for the elastic wave equation	237
8.3.1	$P$ and $S$ waves in isotropic media	240
8.4	Wave fronts and rays	242
8.4.1	Medium with constant velocity	244
8.4.2	Medium with a depth-dependent velocity	246
8.4.3	Medium with spherical symmetry	247
8.5	Differential geometry of rays	248
8.6	Calculus of variations. Fermat's principle	254
8.7	Ray amplitudes	258
8.7.1	Scalar wave equation	258
8.7.2	Elastic wave equation	261
8.7.3	Effect of discontinuities in the elastic parameters	268
8.8	Examples	269
8.8.1	$SH$ waves in a layer over a half-space at normal incidence	270
8.8.2	Ray theory synthetic seismograms	274
<b>9</b>	<b>Seismic point sources in unbounded homogeneous media</b>	<b>278</b>
9.1	Introduction	278
9.2	The scalar wave equation with a source term	279
9.3	Helmholtz decomposition of a vector field	281
9.4	Lamé's solution of the elastic wave equation	282
9.5	The elastic wave equation with a concentrated force in the $x_j$ direction	285
9.5.1	Type of motion	288
9.5.2	Near and far fields	289

<i>Contents</i>		xi
9.5.3	Example. The far field of a point force at the origin in the $x_3$ direction	291
9.6	Green's function for the elastic wave equation	295
9.7	The elastic wave equation with a concentrated force in an arbitrary direction	296
9.8	Concentrated couples and dipoles	297
9.9	Moment tensor sources. The far field	300
9.9.1	Radiation patterns. $SV$ and $SH$ waves	303
9.10	Equivalence of a double couple and a pair of compressional and tensional dipoles	305
9.11	The tension and compression axes	306
9.12	Radiation patterns for the single couple $M_{31}$ and the double couple $M_{13} + M_{31}$	308
9.13	Moment tensor sources. The total field	311
9.13.1	Radiation patterns	313
<b>10</b>	<b>The earthquake source in unbounded media</b>	<b>316</b>
10.1	Introduction	316
10.2	A representation theorem	318
10.3	Gauss' theorem in the presence of a surface of discontinuity	321
10.4	The body force equivalent to slip on a fault	322
10.5	Slip on a horizontal plane. Point-source approximation. The double couple	325
10.6	The seismic moment tensor	329
10.7	Moment tensor for slip on a fault of arbitrary orientation	331
10.8	Relations between the parameters of the conjugate planes	338
10.9	Radiation patterns and focal mechanisms	339
10.10	The total field. Static displacement	347
10.11	Ray theory for the far field	352
<b>11</b>	<b>Anelastic attenuation</b>	<b>357</b>
11.1	Introduction	357
11.2	Harmonic motion. Free and damped oscillations	360
11.2.1	Temporal $Q$	362
11.3	The string in a viscous medium	364
11.4	The scalar wave equation with complex velocity	365
11.4.1	Spatial $Q$	366
11.5	Attenuation of seismic waves in the Earth	367
11.6	Mathematical aspects of causality and applications	370
11.6.1	The Hilbert transform. Dispersion relations	371

11.6.2	Minimum-phase-shift functions	372
11.6.3	The Paley–Wiener theorem. Applications	375
11.7	Futterman’s relations	377
11.8	Kalinin and Azimi’s relation. The complex wave velocity	381
11.9	$t^*$	384
11.10	The spectral ratio method. Window bias	384
11.11	Finely layered media and scattering attenuation	386
	<i>Hints</i>	391
	<i>Appendices</i>	407
A	Introduction to the theory of distributions	407
B	The Hilbert transform	419
C	Green’s function for the 3-D scalar wave equation	422
D	Proof of (9.5.12)	425
E	Proof of (9.13.1)	428
	<i>Bibliography</i>	431
	<i>Index</i>	439
