Macaque Societies

Animal and human societies are multifaceted. In order to understand how they have evolved, it is necessary to investigate each of the constituent facets including individual abilities and personalities, life-history traits, mating systems, demographic dynamics, gene flow, social relationships, ecology, and phylogeny. By exploring the nature and evolution of macaque social organization, this book develops our knowledge of the rise of societies and their transformation during the course of evolution. Macaques are the most comprehensively studied of all monkey groups, and the 20 known species feature a broad diversity in their social relationships making them a particularly good group for exploring the evolution of societies. This book will be of primary interest to those studying animal behavior and primatology, but will also be useful to those involved in the study of human societies.

BERNARD THIERRY is Research Director at the Centre National de la Recherche Scientifique in Strasbourg, France. He has studied the social behavior of non-human primates for the past 25 years, and is particularly interested in how internal constraints channel the evolutionary changes of social organization.

MEWA SINGH is Professor of Psychology at the University of Mysore, India. His main research focus is on the evolution of sociality, and he is especially interested in bridging the gap between conservation biology and behavioral biology.

WERNER KAUMANNS is Curator of Primates and Head of the Primatology Working Group at Cologne Zoo, Germany. His special interest is also in conservation biology, and he has been involved in research on liontailed macaques with special reference to the effects of habitat fragmentation.

## Introduction

1. Why macaque societies?  
   *Bernard Thierry, Mewa Singh, and Werner Kaumanns*  
   3

## Part I Individual attributes

2. Personality factors between and within species  
   *John P. Capitanio*  
   11
   - Box 2 Social intelligence  
     *Josep Call*  
     33

3. The role of emotions in social relationships  
   *Filippo Aureli and Gabriele Schino*  
   38
   - Box 3 Power and communication  
     *Signe Preuschoft*  
     56

4. Reproductive life history  
   *Fred Bercovitch and Nancy Harvey*  
   61
   - Box 4 Life-history traits: ecological adaptations or phylogenetic relics?  
     *Mewa Singh and Anindya Sinha*  
     80

## Part II Demography and reproductive systems

5. Demography: a window to social evolution  
   *Wolfgang Dittus*  
   85
   - Box 5 Patterns of group fission  
     *Kyoko Okamoto*  
     112
Contents

6 Gene flow, dispersal patterns, and social organization 117
   Hélène Gachot-Neveu and Nelly Ménard
   Box 6 Dominance and paternity 131
   Andreas Paul

7 Mating systems 135
   Joseph Soltis
   Box 7 Homosexual behavior 151
   Paul L. Vasey

Part III Social relationships and networks 155

8 Dominance style, social power, and conflict management: a conceptual framework 157
   Jessica C. Flack and Frans B. M. de Waal
   Box 8 Social space and degrees of freedom 182
   Marina Butovskaya

9 How kinship generates dominance structures: a comparative perspective 186
   Bernard Chapais
   Box 9 Inter-group relationships 204
   Matthew A. Cooper

10 Intergenerational transmission of behavior 209
    Christophe Chauvin and Carol M. Berman
    Box 10 Maternal behavior, infant handling, and socialization 231
    Dario Maestripieri

Part IV External and internal constraints 235

11 Do ecological factors explain variation in social organization? 237
    Nelly Ménard
    Box 11 Intraspecific variation: implications for interspecific comparisons 262
    David A. Hill

12 Social epigenesis 267
    Bernard Thierry
Box 12  The role of contingency in evolution  
Christophe Abegg
290

13 The use of artificial-life models for the study of social organization  
Charlotte K. Hemelrijk
295

Box 13  Proximate behaviors and natural selection  
William A. Mason
313

Part V  An outside viewpoint  
319

14 An anthropologist among macaques  
Maurice Godelier
321

Box 14  Do macaque species have a future?  
Yasuyuki Muroyama and Ardith A. Eudey
328

Conclusion  
15 Toward integrating the multiple dimensions of societies  
Bernard Thierry, Mewa Singh, and Werner Kaumanns
335

Acknowledgments

This volume arises from a conference on *Macaque Societies and Evolution* sponsored by the Wenner–Gren Foundation for Anthropological Research and held at the University of Mysore in March 2001. The conference provided a perfect place for free-thinking and stimulating discussion owing to the continuous support of the Foundation and the keen assistance of the staff of the Department of Psychology of the University of Mysore. During the conference, it became apparent that the time was ripe to synthesize different lines of investigation on macaque social organization and to start considering how their various dimensions could be integrated.

Many people have participated in bringing this book to fruition. The editors would like to express their heartfelt gratitude to the contributors of the volume. They met the challenge to produce innovative syntheses within the scope of a tight editorial schedule. They generously assisted as reviewers of other contributors. All have agreed to join the editors in donating their share of royalties to a primate conservation fund.

We are indebted to Roland Seitre and Christophe Abegg for offering photographs free of charge. We are grateful to James Anglin and Chittampalli Ravichandra for high-quality language advice. We owe additional thanks to Tracey Sanderson at the Cambridge University Press for unremitting commitment during the editorial process. Last but not least, we would like to acknowledge Odile Petit, Pierre Uhlrich, Philippe Ropartz and Yvon Le Maho for unfailing support.

Acknowledgments by contributors

*Chapter 2.* Thanks to S. Gosling, M. Prather, R. Robins and W. Mason for helpful comments, to C. Brennan, K. Floyd and E. Tarara for technical assistance, and to the National Institutes of Health for their support (MH49033 and RR00169).

*Chapter 3.* Thanks to J. Capitanio, C. Schaffner and the three editors for useful discussion and comments.

xiii
Acknowledgments

Chapter 4. Thanks to W. Mason, M. Singh, J. Soltis and B. Thierry for comments on the manuscript.

Chapter 5. The research on toque macaques was supported by a series of grants from the US National Science Foundation, the National Geographic Society, the Harry Frank Guggenheim Foundation, the Smithsonian Institution Scholarly Studies Fund and the Institute for Field Studies (Earthwatch). The Smithsonian National Zoological Park provided logistic and administrative support. Thanks to the government of Sri Lanka for permission to carry out the research and in particular the directors of the Institute of Fundamental Studies, A. Kovoor and K. Tennakone. Thanks to S. Gunatilake and K. Liyanage for long-term assistance with field research, N. Basnayake, U. Chandra for assistance in data collection, V. Dittus for help in project management, and W. Kaumanns, N. Ménard, M. Singh, B. Thierry and A. Watson for critical reading of the manuscript.

Chapter 6. Thanks to B. Thierry, A. Paul, J. de Ruiter and G. A. Hoelzer for helpful comments on an earlier draft, and to the Bettencourt–Schueller Foundation for financial support.

Box 6. Thanks to W. Kaumanns, B. Thierry, and P. Vasey for comments, and M. Singh and his collaborators, whose efforts made the Mysore conference both pleasant and successful.

Chapter 7. Thanks to M. Singh, B. Thierry, and W. Kaumanns for inviting me to the conference from which this book grew. The work on Japanese macaques was supported by the National Science Foundation and the Japan Society for the Promotion of Science, and I wrote the chapter while receiving an intramural training award from the National Institutes of Health.

Chapter 8. Thanks to B. Thierry, B. Chapais, M. Butovskaya, A. Paul, and W. Kaumanns for helpful comments. The first author acknowledges the Wenner-Gren Foundation for support during the project.

Chapter 9. Thanks to the editors for inviting me to contribute to this volume, and to M. Cooper, L. Isbell, W. Kaumanns, D. Maestripieri, J. Prud’homme, S. Teijeiro, and B. Thierry for helpful comments.

Chapter 10. Thanks to the editors for inviting us to contribute to the volume, and to B. Thierry, D. Custance, F. de Waal, M. Drapier, W. Kaumanns, and K. Watanabe for helpful discussion and comments.

Chapter 11. Thanks to the editors for inviting me to participate, and to D. Hill, B. Thierry, M. Singh, P. Deleporte, and C. Chauvin for constructive comments.
Acknowledgments

Chapter 12. Thanks to C. Marengo, C. Abegg and O. Petit for providing suggestions and data, to C. Hemelrijk, F. Aureli, and R. Noé for helpful comments, and to A. Iwaniuk and S. Pellis for carrying out phylogenetic analyses.

Chapter 13. Thanks to the editors for inviting me to contribute to the volume, to R. Pfeifer and R. Martin for continuous support, and to the A. H. Schultz Foundation for financial support.
