<b>List of exercises</b>	xi
<b>Preface to the Series</b>	xxiii
<b>Preface</b>	xxvii
<b>PART A</b>	<b>PROBABILITY AND DISTRIBUTION THEORY</b>
<b>1</b>	<b>Probability</b> 3
1.1	Events and sets 9
1.2	Conditioning and independence 19
1.3	Factorials, permutations, and combinations 27
<b>2</b>	<b>Random variables, probability distributions and densities</b> 33
2.1	Distributions, densities, quantiles, and modes 40
2.2	Distribution of a variate constructed from another variate 45
2.3	Mixing of variates 52
<b>3</b>	<b>Expectations and their generating functions</b> 57
3.1	Calculating the moments 63
3.2	Equality and inequality relations for moments and distributions 67
3.3	Generating functions and the properties of moments 79
<b>4</b>	<b>Special univariate distributions</b> 95
4.1	Discrete distributions 105
4.2	Continuous distributions 116
4.3	Classifications: exponential family, information, stability 138
<b>5</b>	<b>Joint distributions and densities</b> 149
5.1	Multivariate discrete 152
5.2	Bivariate continuous 156
5.3	Trivariate continuous 162
5.4	Distribution functions and independence of variates 166

<b>6</b>	<b>Conditioning, dependence, and joint moments</b>	171
6.1	Moments and dependence	178
6.2	Conditional distributions and expectations, theory	198
6.3	Conditional distributions and expectations, practice	204
6.4	Conditional distributions and dependence	215
<b>7</b>	<b>Functions of random variables</b>	227
7.1	Linear, univariate, and other elementary transformations	232
7.2	Products and ratios	248
7.3	General transformations, including geometrical and ordering	257
<b>8</b>	<b>The multivariate normal and functions thereof</b>	281
8.1	Properties of the multivariate normal	284
8.2	Quadratic forms for the multivariate normal	303
 <b>PART B ESTIMATION AND INFERENCE</b>		
<b>9</b>	<b>Sample statistics and their distributions</b>	327
9.1	Sampling and sample moments	331
9.2	Normal sample's moments, Wishart distribution, and Hotelling's $T^2$	345
9.3	Empirical distributions, order statistics, sign and rank correlations	361
<b>10</b>	<b>Asymptotic theory</b>	371
10.1	Modes of convergence of variates	377
10.2	Laws of large numbers and central limit theorems	399
10.3	Law of iterated log, stable limit theorem, distribution of extremes	419
<b>11</b>	<b>Principles of point estimation</b>	437
11.1	Estimators' bias, efficiency, and consistency	446
11.2	Sufficiency, completeness, best-unbiasedness, and admissibility	457
11.3	Ancillarity and independence of statistics	476
<b>12</b>	<b>Likelihood, information, and maximum likelihood estimation</b>	485
12.1	Examples of MLEs and efficiency bounds	493
12.2	General properties of MLE, score, and information	514
12.3	Likelihood for normal linear model	524
12.4	Further properties of likelihoods: nonstandard aspects	540
<b>13</b>	<b>Other methods of estimation</b>	551
13.1	Method of moments	559
13.2	Least squares	562
13.3	Nonparametric estimation	574
13.4	Bayesian estimation	583
13.5	Parametric confidence regions	589
<b>14</b>	<b>Tests of hypotheses</b>	605
14.1	Basic results	619
14.2	GLR $\varphi$ , $LR$ , $W$ , and $LM$ tests	625
14.3	Further analysis of test optimality	657

*Contents*

ix

14.4	Distribution-free methods: nonparametric and goodness-of-fit tests	680
<b>Appendix A</b>	<b>Some mathematical tools</b>	<b>699</b>
A.1	Some methods of indirect proof	699
A.2	Primer on complex numbers and polynomials	700
A.3	Series expansions	704
A.3.1	Sequences and limits	704
A.3.2	Convergence of series	705
A.3.3	Special series	707
A.3.4	Expansions of functions	710
A.3.5	Multiple series, products, and their relation	712
A.4	Further calculus	713
A.4.1	Difference calculus	714
A.4.2	Linear difference equations	717
A.4.3	Stieltjes integrals	717
A.4.4	Convexity	721
A.4.5	Constrained optimization	721
<b>Appendix B</b>	<b>Notation</b>	<b>727</b>
B.1	Vectors and matrices	727
B.2	Mathematical symbols, functions, and operators	729
B.3	Statistical symbols, functions, operators, distributions, and abbreviations	734
	<b>Bibliography</b>	<b>741</b>
	<b>Index</b>	<b>753</b>
