- Blood transfusion: 269–82
- Disorders of red cells: 209–16
- Patients who do not accept blood products: 226
- Patients with known disorders of hemostasis: 222–7
- Perioperative erythropoietin therapy: 226
- Polycythemia (erythrocytosis): 214–16
- Preoperative assessment of bleeding risk: 219–20
- Preoperative autologous blood donation: 226
- Sickle cell diseases: 212–13
- Hemoglobin, preoperative testing: 34
- Hemophilia A and B, bleeding risk for surgery: 222–3
- Hepatic profile see liver disease
- Herbal medications, perioperative use: 40, 45
- Hernia
  - Hiatal hernia repair: 598–9
  - Inguinal hernia repair: 561–2
  - Repairs under monitored sedation: 15
  - Ventral hernia repair: 559–60
- Heyde's syndrome (bleeding from gastrointestinal dysplasia): 97
- Hiatal hernia repair: 598–9
- Hip surgery see orthopedic procedures and complications
- History of consultation between physicians: 1–2

### Hypertension (Perioperative Management)
- 109–19
  - Hemodynamic response to anesthesia: 109
  - Hypertensive disorders of pregnancy: 505–8
  - Hypothyroidism: 112
  - Management of antihypertensive medications: 113–15
  - Medications for postoperative hypertension: 116–19
  - Newly diagnosed hypertension: 115–16
  - Perioperative risks of hypertension: 109–10
  - Pheochromocytomas: 112–13, 383–5
  - Postoperative hypertension (POH): 116–19
  - Preoperative blood pressure management: 113
  - Preoperative evaluation of hypertensive patients: 111–13
  - Risk assessment: 109–11
  - Secondary causes of hypertension: 112–13
  - Use of beta-blockers to reduce operative risk: 116
  - Hypertension medication management: 113–15
  - Angiotensin II receptor blockers (ARB): 114–15
  - Angiotensin-converting enzyme inhibitors (ACEI): 114
  - Beta-blockers: 113–14
  - Calcium-channel blockers (CCBs): 115
  - Clonidine: 114
  - Diuretic agents: 115
  - Other agents (older hypertensive agents): 115
  - Hypokalemia (postoperative): 355–7
  - Hyponatremia (postoperative): 353–5
  - Hypothyroidism, as secondary cause of hypertension: 112
  - Hypoxia: 158, 159–60

### Hypertension Medication Management

perioperative management 390, 393
surgical procedures and complications 744–6
rheumatologic diseases 389–95
acute postoperative arthritis 390, 392–3
acute postoperative gout 392–3
aspirin 389–90
dermatomyositis 394
fractures 390, 392
giant cell arteritis (GCA) 394–5
NSAIDs 389–90
osteoporosis 390, 392
perioperative evaluation 389–95
perioperative glucocorticoid therapy 390–1, 393
perioperative management of rheumatoid arthritis 390, 393
perioperative methotrexate therapy 391–2
polymyositis 394
scleroderma 394
systemic lupus erythematosus (SLE) 393–4
vasculitis 394–5
scleroderma 394
SERMs (selective estrogen receptor modulators), perioperative use 40, 43
serum chemistry testing, preoperative 11–14, 18
shortness of breath (postoperative) 102–3, 104
sickle cell diseases 212–13
Index

812  

skin grafting for burns 649–50
small bowel resection procedure 531–2
sodium disorders
patients with renal disease 333
postoperative 353–5
somatoform disorders 489–90
spine
herniated disk treatment and complications 688–91
lumbar spine surgery and complications 731–4
scoliosis or kyphosis in adults 735–8
splenectomy 236, 237
procedure and complications 550–1
SSRIs (selective serotonin reuptake inhibitors), perioperative use 40, 44
stab wound surgery and complications 565–7
Staphylococcus aureus infections 163–6, 287, 290, 291, 318, 324
sternal wound infections, muscle flap coverage surgery 647–8
Streptococcus pyogenes infection, and postoperative fever 318
stress, behavioural regression responses 491
stroke see cerebrovascular disease
substance abuse 493–501
alcohol abuse in surgical patients 494–6
among trauma patients 493
cocaine abuse in surgical patients 497–8
detection rates in patients 493
diagnosis presentation and treatment planning 500
medical therapy considerations by drug class 494–500
opiate abuse in surgical patients 498–500
postoperative pain management issues 500–1
prevalence 493
screening and diagnosis strategies 493–4
sedative-hypnotic abuse in surgical patients 494–6
stimulant abuse in surgical patients 497–8
suicide risk assessment, patients with depression 481–2
supraventricular tachycardia, and postoperative chest pain 104
surgical site infections, and postoperative fever 319, 320–2
systemic lupus erythematosus (SLE) 393–4
thrombocytopenia, bleeding risk for surgery 223–4
thromboembolism, bleeding risk for surgery 224–5
thromboembolism, lower extremity embolectomy 620–2 see also deep venous thrombosis; pulmonary embolism; venous thromboembolism
thyroid disorders 367–72
assessing the hypothalamic–pituitary–thyroidal axis 369
complications of surgery 370
effects of (non-thyroidal) surgery on thyroid function 372
evaluation thyroid anatomy and function 369
hyperthyroidism 370–2
hypothyroidism 372
measurement of thyroid products 367–9
perioperative use of thyroid medications 40, 43
preoperative thyroid evaluation 367–9
preparation for surgery 369–70
reasons for surgery 369
surgery in hyperthyroid patients 370–2
surgery in hypothyroid patients 372
thyroid gland description and function 367
thyroidectomy procedure and complications 520–1
ticlopidine (Ticlid), perioperative use 40, 41
total hip replacement see orthopedic procedures and complications
total knee replacement see orthopedic procedures and complications
toxic shock syndrome, and postoperative fever 318
TPN (total parenteral nutrition) 21, 23, 25, 26–9
traceoectomy procedure and complications 517–19
transplant surgery
patient with cardiovascular disease (non-cardiac transplant) 72–3
prophylaxis for infections 301–2
trauma patients
bleeding risk from damage control surgery 221
bleeding risk from massive transfusion 221
prophylaxis for infections 300–1
tricyclic antidepressants (TCAs), perioperative use 40, 44
urinalysis, preoperative testing 11–14, 18, 35–6
urinary tract infections, and postoperative fever 319, 323
urologic procedures and complications
cystectomy and urinary diversion 780–4
DVT/PE prophylaxis 253, 261–3
female urinary incontinence surgery 796–8
interstitial laser thermal therapy for benign prostatic hyperplasia 791–2
nephrectomy 777–9
prostate surgery (post-TURP syndrome) 354
prostatectomy bleeding risk 221
radical prostatectomy 785–6
transurethral resection of the prostate (TURP) 787–9
upper urinary tract calculi management 793–5
valvular heart disease, prophylaxis for infections related to surgery 294
valvular surgery, elderly patients 455
vascular surgery and complications
abdominal aortic aneurysm repair 610–14
aortoiliac bypass grafting 615–17
carotid endarterectomy 667–8
chronic mesenteric ischemia treatment 623–6
diabetes patients 455–6
femoropopliteal bypass grafting 618–19
inferior vena cava filters 627–8
lower extremity embolectomy 620–2
patient with cardiovascular disease 72
portal shunting procedures 629–31
prophylaxis for infections 296, 297
vasculitis 394–5
venous thromboembolism (VTE) 158, 159, 167–73
duration of risk following surgery 261–3
pathophysiology 248–9
perioperative prophylaxis 226–7
peripartum 509–10
prophylaxis for specific surgery 252–63
prophylaxis techniques 249–52
risk factor classification 249, 250
see also deep vein thrombosis; pulmonary embolism;
thromboembolism

ventral hernia repair and complications 559–60
von Willebrand’s disease, bleeding risk for surgery 222, 223
Waldenstrom’s macroglobulinemia 242
water balance disorders
patients with renal disease 333
postoperative 353–5
white blood cell count, preoperative testing 34
zygomycosis (mucormycosis) in acute leukemia 233
