

## Contents

Preface	<i>page ix</i>
<b>1 Introduction</b>	<b>1</b>
1.1 The need for computers in science	1
1.2 What is computational physics?	1
1.3 Linux and C++	2
<b>2 Basics</b>	<b>5</b>
2.1 Basic computer hardware	5
2.2 Software	7
2.3 How does it work?	9
<b>3 Short introduction to Linux</b>	<b>11</b>
3.1 Getting started and logging in	11
3.2 Getting help	12
3.3 The filesystem, or where is everything?	12
3.4 Moving around in your system	13
3.5 Listing your directory	14
3.6 Creating your own files	15
3.7 Doing some work	17
3.8 Good programming	19
3.9 Machine representation and precision	20
3.10 Exercises	23
<b>4 Interpolation</b>	<b>25</b>
4.1 Lagrange interpolation	27
4.2 Neville's algorithm	29
4.3 Linear interpolation	30
4.4 Polynomial interpolation	31

4.5 Cubic spline	33
4.6 Rational function interpolation	34
4.7 Exercises	35
<b>5 Taking derivatives</b>	<b>37</b>
5.1 General discussion of derivatives with computers	37
5.2 Forward difference	38
5.3 Central difference and higher order methods	38
5.4 Higher order derivatives	40
5.5 Exercises	40
<b>6 Numerical integration</b>	<b>41</b>
6.1 Introduction to numerical integration	41
6.2 The simplest integration methods	42
6.3 More advanced integration	44
6.4 Exercises	49
<b>7 Solution of nonlinear equations</b>	<b>51</b>
7.1 Bisection method	51
7.2 Newton's method	52
7.3 Method of secants	52
7.4 Brute force method	53
7.5 Exercises	53
<b>8 Differential equations</b>	<b>55</b>
8.1 Introduction	55
8.2 A brush up on differential equations	55
8.3 Introduction to the simple and modified Euler methods	57
8.4 The simple Euler method	58
8.5 The modified Euler method	62
8.6 Runge–Kutta method	65
8.7 Adaptive step size Runge–Kutta	70
8.8 The damped oscillator	72
8.9 Exercises	81
<b>9 Matrices</b>	<b>83</b>
9.1 Linear systems of equations	83
9.2 Gaussian elimination	84
9.3 Standard libraries	86

9.4 Eigenvalue problem	86
9.5 Exercises	88
<b>10 Random processes and Monte Carlo simulation</b>	<b>89</b>
10.1 Random processes in science	89
10.2 Random number generators	90
10.3 The random walk	92
10.4 Random numbers for nonuniform distributions	97
10.5 Monte Carlo integration	101
10.6 Exercises	103
<b>References</b>	<b>105</b>
<b>Appendix A The ROOT system</b>	<b>107</b>
A.1 What is ROOT	107
A.2 The ROOT basics	107
A.3 The first steps	108
A.4 Lab ROOT	113
A.5 Exercises	115
<b>Appendix B Free scientific libraries</b>	<b>117</b>
B.1 LAPACK	117
B.2 SLATEC	118
B.3 Where to obtain ROOT	118
<b>Appendix C FORTRAN and C++</b>	<b>119</b>
C.1 Calling FORTRAN from C++	120
<b>Appendix D Program listings</b>	<b>121</b>
D.1 Simple Euler	121
D.2 Runge–Kutta program	123
D.3 Random walk in two dimensions	131
D.4 Acceptance and rejection method with $\sin(x)$ distribution	134
Index	137
