II–VI compounds 149
III–V compounds
  GaAs 149, 172
  GaP 149
IV–IV elemental semiconductors
  Si 148, 162
  Ge 148

acceptors 174
action 4
angular momentum 13, 87, 90, 90, 102
  eigen values and eigen states 90, 90
  generalized 102
  Schrödinger-representation 13
axis of quantization 89

band-gap, energy 162
basis states 21
black-body radiation 75, 78
  Planck's law 75, 81
  Rayleigh–Jeans law 80
Bloch 153, 155, 195, 202
  equation for magnetization 202
  optical equation 195
  theorem 153, 155
Bohr 96, 105
  magneton 105
  radius 96
Boltzmann (*see also* statistics) 133, 165
  constant 165
  distribution function 168
Born–Von Karmen condition 156
Bose–Einstein statistics (see Statistics)
bosons 114
bound states (*see also* square-well potential) 50, 53, 95
  Coulomb potential well and hydrogen atom 53, 95
  harmonic oscillators 71
boundary conditions 39, 40
bra vector 24
brackets 24
Brillouin zones 156, 161
  boundaries 156
  zone schemes 160, 161
broadening of spectral lines *see also* line width 125
  homogeneous 125
  inhomogeneous 125

canonical variables 3
carbon 144
  diamond 148
  graphite 147
charge neutrality condition 167, 175
chemical potential 164, 165
classical mechanics 1
  basic formulation 1
  Hamilton's and Lagrangian formulation 30
  Newton's equation of motion 2, 6
coherence, atomic 132, 184
coherent state 76, 81, 83
Commutators and commutation relations 13, 14, 15, 16, 65, 77, 88
  angular momentum operators 88
  creation and annihilation operators 65
  measurement processes 16
  parity and Hamiltonian operators of atoms 55
  position and momentum operators 15
  uncertainty principle, relationship to 15
Completeness 21, 25
conduction band 152, 162
conservative system 20
Coulomb potential well 53, 87
covalent bonding 139, 151
creation and annihilation operators 69
crystalline structures 135
  cubic 149
  diamond 148
  hexagonal 149
  tetrahedral complexes 148
  zincblende 148

de Broglie waves 33, 36
  wavelength 36
Debye length 113
degeneracy 59, 95, 96, 114
degenerate condition (semiconductor) 168, 176
Density matrix and operator 183, 186, 187
  equations 186, 187, 190
  properties 183
density of states 79, 163, 180
  electromagnetic waves 79
  electrons 163, 180
dielectric constant, complex 193
diffusion current 178
dipole 119, 190
  electric 119, 123, 184

dipole (cont.)
  operator 190
Dirac 21, 23, 124
  delta-function 21, 37, 124
  notation 23
donors 174
doping
  n-type 174
  p-type 174

effective mass 41, 170
effective density-of-states 169, 171
Ehrenfest's theorem 32
eigen values and eigen functions 17, 22, 24
  continuous 17, 22, 24
  discrete 17
Einstein coefficients 130, 132
  A-coefficient 130, 132
  B-coefficient 130, 132
electromagnetic radiation or waves 11, 65, 75, 77
  interference 11
  quantization rules 75, 77
electron 86
  charge 86
  mass 86
entanglement 11, 157
E vs. *k* diagram 170
expectation values 4, 10, 12
extrinsic and intrinsic semiconductors 169, 173

Fermi energy 164, 180
  1-D 164
  2-D 180
  3-D 164
Fermi golden rule 121, 124
Fermi level 166, 175
  quasi-Fermi level 178
  temperature dependence 175
Fermi statistics (*see* statistics)
fermions 113
Free electron model 149, 153
free particle 33

Glauber-state (*see* coherent state)
graphite (*see* carbon)
group velocity 170

Hamiltonian 5, 6, 13
  operator form 5, 13
  Schrödinger's representation 6
harmonic oscillators 53, 63, 63, 64, 65, 70
  basic model 63
  equation of motion 63, 64
  Heisenberg's formulation 63
  quadratic potential well 53
  quantized energies 65
  Schrödinger's formulation 70
Heisenberg 5, 15, 26, 28, 29
  equation of motion 28, 29
  formulation of
    quantum mechanics 26
    harmonic oscillator 63
  matrix mechanics 27
  uncertainty principle 5, 15
Hermitian operator 32, 185
Hilbert space 22
holes 165
hydrocarbons 145
  acetylene 146
  benzene 147
  ethane 146
  ethylene 146
  methane 145
hydrogen atom 86, 87, 92, 96, 97, 107
  Hamiltonian 86, 107
  orbital degeneracy 96
  quantized energies 96
  Schrödinger equation 87
  wave functions 95, 97

impurities 174
incoherence (*see* coherence)
indistinguishability of particles 113
interaction of electromagnetic interaction with atoms 119, 119, 119, 124, 126, 190
  absorption 119, 128
  emission 119, 128, 131
    cross section 131
    spontaneous 132
    stimulated 119
  selection rules 119, 126
  transition probabilities 119, 124
interference 11
ionization energy
  dopants in semiconductors 174
  hydrogen atom 96

Ket vector 24
Kramers–Kronig dispersion relations 193
laser 119, 130, 198, 199, 200
  adiabatic approximation 199
  dynamics 199
  laser rate equations 200
  relaxation oscillation 200
line shape function 194
line width (*see also* broadening) 125, 125
  homogeneous 125
  inhomogeneous 125
linear momentum 5, 33
  free particle 33
  operator (Schrödinger representation) 5

many-electron atoms and ions 110
Matrix 27
  creation and annihilation operators (*see* operator) 69
  diagonal 27
  diagonalization 27
  electric dipole (*see* dipole)
  matrix mechanics (*see also* Heisenberg)
Maxwell's equations 76
mean square deviation 10
measurements (*see also* commutators and commutation relations; Heisenberg's uncertainty principle) 9, 13
molecular orbitals 135, 140, 145, 146

hybridization 145
sp-, sp^2-, sp^3-orbitals 145, 146
molecules 139, 140, 143
diatomic 139, 140
hydrogen 143
momentum representation 4, 37

Newtonian mechanics (*see* classical mechanics)
nonlinear optical susceptibilities 196, 198
normalization 9

observables 4, 12
operator (*see also* postulates) 12, 13, 69
annihilation 69
Creation 69
eigen values and eigen functions of 17
equation 13
orbital angular momentum 88
Schrödinger representation 88
organic molecules 144
orthogonality 21
oscillator strength 203

parity 54, 54, 72, 93, 126
concept 54
eigen values 54
operator 54
Pauli
exclusion principle 110
spin matrices 103
periodic structures and solids 154, 156
Periodic Table 110, 115, 117
permutation symmetry 113
perturbation theory 119, 120, 135, 197
degenerate states 137
time-dependent 119, 120
time-independent 135
photons (*see also* electromagnetic radiation or waves) 67, 75, 78
quantized energies 78
photons and harmonic oscillators 63
Planck 72, 75
black-body radiation law 75
postulate 72
constant 5
p–n junction 151, 176
bias voltages 177
break-down voltage 179
built-in potential 177
directions of current flow 177
passivation 179
saturation current 179
Poisson 30, 83
bracket 30
distribution function 83
polarization 120, 190, 202
electric fields 190
electromagnetic waves 120
magnetization 202
postulates of quantum mechanics 8
equations of motion 8

state functions 8
potential barriers 47
potential steps 43
probability 4, 9, 10, 22
current 40, 42
density 9
distribution function 10
pure state 185
density-matrix, for 185
quantum numbers 90, 91
angular momentum 90, 91
azimuthal 91
harmonic oscillator, energies of 65
photon, energy (*see* Photons) 78
principal 96
spin angular momentum 101

radiative life time 132
reciprocal lattice 157
reflection coefficient 45
relaxation times
T_1 189, 194
T_2 132, 189, 194
representation 4, 21
resonance 123, 124, 130, 147
chemical 147
electromagnetic or optic 123, 124, 130
Rydberg 127, 128
constant 127
formula 128

saturation parameter 195
scalar product 22, 24, 27
Schrödinger 4, 18, 19
dynamics, picture of 28
equation 18, 19, 24
time-dependent 18
time-independent 19, 24
harmonic oscillator, formulation of 70
representation 4, 13
Schwartz inequality 15
semiconductors 151
Shockley equation 179
Slater determinant 114
spherical harmonics (*see also* hydrogen atom) 91, 92
spin angular momentum 101
spin–orbit interaction 106
spin–orbit parameter 107
square-well potential, 51
finite 55
infinite 51
three-dimensional 59
state functions (*see* wave functions) 3, 8, 9
Schrödinger's representation 9
stationary states 19
statistics 81, 163, 164, 165
Bose–Einstein 81
Fermi–Dirac 163, 164, 165
Maxwell–Boltzmann (*see* Boltzmann)
superposition principle 11, 22, 73
susceptibility, complex 192
symmetry 54, 55, 113, 114
exchange 113
inversion (*see also* parity) 54, 126
