Preface xi
Structure and résumé xiv
Acknowledgements xvii

1 Heat, buoyancy, instability and turbulence 1
   1.1 Introduction 1
   1.2 Heat and temperature 3
   1.3 Density 5
   1.4 Instability and oscillations resulting from buoyancy forces 8
   1.5 Transfer of heat 12
   1.6 Heat capacity of the ocean 17
   1.7 Turbulence 19
   1.8 Turbulent dispersion 30
   1.9 Diapycnal heat transfer in the ocean 37

2 Neutral stability: internal waves 44
   2.1 Introduction 44
   2.2 Interfacial waves 50
   2.3 Internal inertial gravity waves in continuous stratification 52
   2.4 Energy and energy flux 62
   2.5 The Garrett–Munk spectrum; the energy in the internal wave field 64
   2.6 Wave–wave interactions 67
   2.7 Generation of internal waves 70
   2.8 Internal waves and vortical mode 77

3 Instability and transition to turbulence in stratified shear flows 80
   3.1 Introduction 80
   3.2 The onset of instability in shear flows 83
   3.3 The transition from Kelvin–Helmholtz instability to turbulence 92
   3.4 Unstratified shear flows 105
   3.5 Energy dissipation in stratified shear flows and the efficiency of mixing 106
   3.6 Holmboe instability 109
   3.7 The shape of billow patches and the length of billow crests 110
   3.8 Instability in a rotating ocean 112
