Preface xi

Acknowledgments xix

1 Biogeohistory and the development of classical biostratigraphy 1

Summary 1

Introduction 1

Significance of fossils 3

Zones and zonation through a century 8

2 The biostratigraphy of fossil microplankton 19

Summary 19

Introduction 19

An ascending conceptual series in planktonic zones 21

Planktonic foraminifera in the Caucasus 22

The Trinidad connection 25

From assemblage zones to range zones 28

From range zones to phylozones 29

Coping with provinciality 33

Towards the chronozone 36

Datums 38

Cross-correlation, calibration and quality control 42

Correlations in the Austral Palaeogene 46

3 Biostratigraphy: its integration into modern geochronology 47

Summary 47

Arcane initials aplenty: the CTS, the GPTS and the IMBS 47

Homotaxy and diachrony 54

Biostratigraphy and cyclostratigraphy 65

- 4 Biostratigraphy and biohistorical theory I: evolution and correlation 85**
- Summary 85
 - Two approaches to evolutionary theory 85
 - Micropalaeontology and biostratigraphy: preconceptions and practice 86
 - The thoughts of Martin Glaessner 88
 - Planktonic foraminifera in correlation: bioentities or biocharacters? 91
 - Planktonic foraminifera: biogeography and stratification 105
 - Planktonic foraminifera and stable isotopes 108
 - Planktonic foraminifera and molecular systematics 114
 - Speciation in biostratigraphically important lineages 117
 - Stage of evolution: the larger foraminifera 134
 - Stage of evolution: the Cenozoic mammals 147
 - The tensions in biostratigraphy: can the species survive? 152
 - Concluding comments: evolution and biochronology 158
- 5 Systemic stratigraphy: beyond classical biostratigraphy 164**
- Summary 164
 - Systemic stratigraphy 164
 - Biostratigraphy of reversible events and high-resolution biostratigraphy 166
 - Sequence biostratigraphy 176
- 6 Biostratigraphy and biohistorical theory II: carving Nature at the joints 205**
- Summary 205
 - Hierarchy, tiering and the scales of time and life 205
 - Are there natural biostratigraphic units? 214
 - Cenozoic chronofaunas of Tethyan neritic foraminifera 227
 - On the durations of Cenozoic biozones and biochrons 244
 - Why are good index fossils, good index fossils? 248
 - Taxic stratigraphic ranges and quantified biostratigraphy 263
- 7 Biostratigraphy and chronostratigraphic classification 271**
- Summary 271
 - Introduction: why do we need a geological timescale? 271
 - What is a stage? 277
 - Microfossils and stages 282
 - Concurrent boundaries in a nested hierarchy? 284
 - Microplankton and classical stages 286
 - Where is the Cretaceous–Palaeogene boundary? 291
 - Where is the Paleocene–Eocene boundary? 297
 - Where is the Eocene–Oligocene boundary? 300

Where is the Palaeogene–Neogene boundary?	305
Where is the Miocene–Pliocene boundary?	310
Where is the Pliocene–Pleistocene boundary?	312
Regional timescales	312
Depositional sequences and regional stages	336
Conclusion: on fossils and time	339
8 On biostratigraphy and biogeohistory	346
Summary	346
The idea of Earth history	346
But is it history?	355
‘Consilience of inductions’	360
Another voice: hermeneutics rides again	364
Early biostratigraphy: theory-free?	366
Species and biostratigraphy	369
On the ‘species problem’	372
Species as individuals	377
The change in world view	383
Finale: the three central concerns of biostratigraphy	394
<i>References</i>	397
<i>Index</i>	447
