

Index

- ACh (acetylcholine) 99
 mechanisms of release in development 99–100, 101
 modes of action 102
 role in retinal wave generation 275–6, 279
 sources in development 101–2
- AChRs (ACh receptors), in the developing retina 103–4, 105
- amacrine cells 1–2, 3, 30
 AII type 2–3
 cholinergic amacrine cells 212, 274–6, 279
 displaced 44
 early synapse formation 266–7, 268
 evidence for programmed cell death 212
 factors which shape arborization 245, 246
 identification 44
 morphological development 245, 246
 neuroblast migrations 60, 63–4
 size 44
 spontaneous bursting in immature cells 272–5, 279
 starburst amacrine cells 297
 subtypes 30, 44–5
 timing of genesis 44–5
see also retinal waves
- ANB (anterior neural border) 12–13
- anterior neural plate, separation of eye field 19–20, 21
- apical polarity complex, role in retinal cell migration 67, 68
- apoptosis 130–1, 136, 208
 evidence from pyknotic profiles 213–14
 molecular mechanisms 208
 process 213–14
see also cell death; PCD (programmed cell death)
- arcuate fibres 159
- astrocytes in the retina 172–3
 origin of 173
 role in vascular development 182–3, 184
- asymmetrical cell division, RPCs 32–3, 35–8
- Ath5* gene, bHLH proneural gene 79–80, 81
- ath5* gene, zebrafish 348
- atonal5* gene, zebrafish 348
- ATP (adenosine triphosphate) 99
 e-ATP (extracellular ATP) 199
 mechanisms of release in development 99–100, 101
 modes of action 102
 receptors in the developing retina 104–5, 106
 receptors on developing Müller cells 182
 sources in development 102
- auto correlation plot, for retinal mosaics 201–2, 203
- autophagy, form of cell death 216–17
- autoradiography 31–3, 34–5
- axon guidance/pathfinding *see* neurite field; neurite growth; RGC axons
- axon pathways, optic nerve 150
- axonal regeneration 150
- axonal transport 150
- Axonin 1 (IgCAM), role in axon guidance 155–6, 157
- basal lamina *see* ILM (inner limiting membrane; retinal basal lamina)
- Bassoon 270, 292
- bax* pro-apoptotic gene 215
- Bcl-2* gene family 214, 216–17
- BDNF (brain-derived neurotrophic factor) 115
 and programmed cell death 116–17
 receptor binding 115
 role in cell death and survival 219
- behavioural screens, for zebrafish mutants 353–4, 356, 357, 358
- bel* (*belladonna*) zebrafish mutant 357, 358
- bFGF (basic fibroblast growth factor), production by Müller cells 176
- bHLH proneural genes
 activation by *Pax6* 82
Ath5 79–80, 81
 generation of multiple cell fates 79–80, 81
 glial cell fate regulation 80
- bHLH transcription factors, in the Notch pathway 78–9
- bicuculline 299

bipolar cells 1–2, 3, 30
 evidence for programmed cell death 212
 factors which shape arborization 245, 246
 midjet bipolar cells 126
 morphological development 245, 246
 recoverin immunostaining 293–6
 ribbon synapse formation 266–7, 268, 269, 270
 role in IPL ON and OFF sublamination 293–4, 295, 296, 297
 blindness, heritable causes 357–9
 blood supply to the eye 1, 2 *see also* retinal vasculature
 BMP (bone morphogenetic protein) inhibition
 and eye formation 9–11
 role in neural induction and patterning 11–14
 BrdU (5'-Bromo-2'-deoxy-uridine) 33, 34–5
brg1 (*Brahma related*) gene function, zebrafish 352

c-fos gene, light-induced expression 289
 Ca²⁺ role in the CNS 103, 112
 Ca²⁺-stimulated synaptic vesicle exocytosis 269
 [Ca²⁺]_i
 role in development 103, 112
 modulation by mAChRs 103–4, 105
 modulation by neurotransmitters 103, 112
 [Ca²⁺]_i local waves 112, 113
 [Ca²⁺]_i propagating waves 112, 114
 [Ca²⁺]_i transients 103, 112
 modulation by neurotransmitters 111–12, 113
 role in cell cycle regulation 111–12, 113
 cadherin 2 (CDH2; N-cadherin), role in retinal cell migration 68
 caecal period 128–9, 130
 caspase 3-mediated apoptosis 214, 216–17
 catecholamine receptors, on developing Müller cells 182
 β-catenin 12
 cDNA microarrays 327–8
 cell adhesion molecules
 role in retinal cell migration 66, 68
 signal transduction 66
 cell autonomous factors, in cell fate determination 42, 47–51
 cell birth order in the retina 34–5, 39, 40–2, 47
 amacrine cells 44–5
 horizontal cells 34–5, 45
 Müller glia 47
 photoreceptors 42, 45–7
 retinal ganglion cells 43
 cell birth order within clones 42, 47–51
 cell birthday 39, 40–1, 42
 cell–cell interactions, retinogenic zone 8–10, 11
 cell cycle in the retina 31–3, 34–5
 and cell fate determination 87–9, 90
 effects of bHLH proneural genes 79–80, 81
 exit on differentiation 87–8
 impact of cell fate determinants 51–2, 90

modulated timing 35, 37
 timing 33–5, 36–7
 cell death 115
 apoptosis in the early retina 130–1, 136
 apoptotic properties of NGF 116–17
 in retinal mosaic development 197–9
 programmed phases in the retina 116–17
 role of e-ATP 199
see also apoptosis; PCD (programmed cell death)
 cell differentiation in the retina 75, 128–9, 130
 and NT-3 115–16
 combinatorial action of transcription factors 82–3
 direction of progress 128–9, 130
 exit from the cell cycle 87–8
 influence of [Ca²⁺]_i levels 103, 112
 influence of neurotransmitters 109–10, 111–12, 113, 114–15
 starting point 128–9, 130
 cell displacement
 foveal cone packing 141–2, 143, 144
 foveal pit formation 132, 138–9, 140
 to form the fovea 127, 128
 cell division
 asymmetrical 32–3, 35–8
 cytoplasmic contents division 38–9, 40
 symmetrical 32–3, 35–8
 terminal (RPCs) 32–3, 35–8
 cell division mode, and plane of cleavage 38–9, 40
 cell-extrinsic cues, retinal progenitor regulation 76–9
 cell fate determination in the vertebrate retina 30–1
 action of homeobox transcription factors 81
 and cell cycle progression 87–9, 90
 cell autonomous and non-autonomous factors 42, 47–51, 52
 compared with *Drosophila* eye and CNS 90–1
 compared with vertebrate spinal cord 91
 competence model 83, 84–5
 future investigations 91–2
 gene interactions 51–2
 impact on cell cycle 90
 in retinal mosaic development 195–6
 models 51–2
 progenitor heterogeneity (mosaic) model 84–5, 87
 role of p27Xic1 cell cycle inhibitor 88, 89
 roles of cell cycle components 88–9
 stochastic choice model 84–5, 87
 study of the retina 75
 timing of 90
 cell interactions, in retinal mosaic development 194–5
 cell-intrinsic factors
 multiple interactions between 82–3
 retinal progenitor regulation 76, 79–81, 83
 cell lineage 42, 47–51

 RPE (retinal pigment epithelium) 1, 2, 218, 312–13
 Rx gene
 EFTF expression 14–15, 17, 19
 role in optic cup development 153
 Rx1 gene, eye field marker 12–13
 Rx3 gene, eye field marker 12–13

S-cones 135–6, 137–40
 S-opsin expression 135–6, 137–40
 S-phase (DNA synthesis) 31–3, 34–5, 59–61
 SAGE (serial analysis of gene expression) 326–7, 328, 329
 sclera, development of 1, 2
 secondary glaucoma 181
 SFRPs (Secreted Frizzled Related Proteins), Wnt
 inhibition 12–13
 Sema5A, axon guidance molecule 161
 Semaphorin guidance molecules 155–7, 161, 163–5
 septo-optic dysplasia (SOD) 162–3
 sequence-based gene expression profiling 326–7, 328, 329
 SFRP1 gene, effects on forebrain patterning 12–13
 Shh (*Sonic hedgehog*) gene 21
 delineation of eye tissue regions 153
 expression by RGCs 161
 expression in zebrafish 348
 genetic programmes triggered by 151–2, 153

Gli target gene 161
 induction of optic stalk 151
 optic cup specification 151–3
 optic stalk specification 151–2, 153
 Sidekicks (1 and 2), possible sublamination guidance
 cues 255–6
 siRNAs (short interfering RNAs) 344
 Six3 gene
 EFTF expression 14–15, 17, 19
 eye field marker 12–13
 Slit1 and 2, axon guidance molecules 157, 161
 Smad2 gene 21
 Smoothed, transmembrane protein 151
 SNAP-25 (synaptosomal-associated protein of
 25kDa) 269–70
 SNARE complex 269–70
 somal translocation 60, 62–3, 67, 69
Sonic hedgehog *see* *Shh*
 spontaneous bursting activity 272–5, 279
 starburst amacrine cells 297
 suprachiasmatic nucleus, generation of circadian
 rhythms 289–91
 SV2 (synaptic vesicle protein 2) 269
 symmetrical cell division, RPCs 32–3, 35–8
 synapse formation 266–7, 272
 chemical synapses 266–7, 271
 dyad and triad formation 266–7, 268, 270–1
 early glutamatergic neurotransmission 268–9
 early synapse formation 266–7, 268
 electrical synapses 271–2
 in retinal neurons 265
 in the fovea 131–2, 134, 135, 138–9
 in the IPL and OPL 266–7, 268
 influence of the extracellular matrix 270–1
 markers for synaptic release-associated proteins 268–70
 ribbon synapses 266–7, 268, 269, 270
 role in IPL structural lamination 250–1, 252
 role of visual experience 267
 ultrastructural studies 266–7, 268
 vesicular transporters 268–9
 synaptic transmission, steps in the process 268
 synaptic vesicular transport 268–9
 syntaxin 269–70
 system matching 224, 227–8

T cell-specific transcription factor (TCF) 12
 TAG-1 (IgCAM), role in axon guidance 155–6, 157
 terminal cell division 32–3, 35–8
 thymine precursors 31–3, 34–5
 TILLING method 343–4
tlc gene, effects on forebrain patterning 12–13
tll gene, EFTF expression 14–15, 17, 19
 transcription factors *see* eye field transcription factors
 (EFTFs)
