Cities and the Making of Modern Europe, 1750–1914

A major new survey of urbanization and the making of modern Europe from the mid-eighteenth century to the First World War. During these years, Europe experienced startling rates of urbanization, with the populations of numerous cities growing by 1000 percent or more. This book explores the causes, course, and consequences of this urban explosion. The authors link urban growth to industrialization, migration, and the growth of colonial empires. They show how the social, political, and intellectual challenges cities posed were met by urban reformers; how cities enriched cultural life; and how European cities influenced and were influenced by colonial cities. No other book in English situates the story of cities within the overall framework of European and imperial history during the long nineteenth century. Cities and the Making of Modern Europe will be essential reading for students of both modern European history and urban history.

Andrew Lees is Professor of History at the Camden Campus of Rutgers University. He is the author of Cities Perceived: Urban Society in European and American Thought, 1820–1940 (1985) and Cities, Sin and Social Reform in Imperial Germany (2002).

New Approaches to European History is an important textbook series, which provides concise but authoritative surveys of major themes and problems in European history since the Renaissance. Written at a level and length accessible to advanced school students and undergraduates, each book in the series addresses topics or themes that students of European history encounter daily: the series embraces both some of the more “traditional” subjects of study, and those cultural and social issues to which increasing numbers of school and college courses are devoted. A particular effort is made to consider the wider international implications of the subject under scrutiny.

To aid the student reader, scholarly apparatus and annotation is light, but each work has full supplementary bibliographies and notes for further reading: where appropriate, chronologies, maps, diagrams and other illustrative material are also provided.

For a list of titles published in the series, please see end of book.

Acknowledgments

Inasmuch as this book builds on earlier books each of us has written about urban history, a full list of the people to whom we are intellectually indebted would be very long. Here, we thank in the first place William Beik for having suggested that we write it for the series he helps to edit and for his comments on our drafts along the way. Others have assisted us too, either by discussing our conception of the volume with us or by reading and commenting on parts of it. For such support, we thank Robert Fishman, Peter Jelavich, Heinz Reif (and participants in his colloquium at the Center for Metropolitan Studies of the Technical University in Berlin), Jürgen Reulecke, Marc Schalenberg, and Jennifer Sessions. Alan Allport and Ralf Stremmel have helped with illustrations. We wish to express gratitude also to the Camden Campus of Rutgers, The State University of New Jersey, and to the University of Pennsylvania for giving us the sabbatical leaves that enabled us to finish this volume. Our editors at Cambridge University Press, Michael Watson, Helen Waterhouse, and Elizabeth Davey have consistently smoothed the way for us, and we are also grateful for their assistance.
