

## Contents

<i>Preface</i>	<i>page ix</i>
1. Symmetry, Classification, and the Analysis of Structured Data	1
1.1 Introduction	1
1.2 Symmetry and Classification	2
1.3 Data Indexed by Symmetries	3
1.4 Symmetry and Data Reduction	5
1.5 Statistical Aspects	8
1.6 Algebraic Aspects	9
1.7 Structured Data	11
1.8 Partitions	15
1.9 Summary	23
Further Reading	23
Exercises	25
Appendix A	29
2. Sorting the Labels: Group Actions and Orbits	30
2.1 Introduction	30
2.2 Permutations	30
2.3 Groups and Homomorphisms	34
2.4 Group Actions	47
2.5 Actions on Mappings	49
2.6 Genotypic Classification	53
2.7 Actions on Binary Trees and Branches	55
2.8 Counting Orbits in Linkage Analysis	56
2.9 Burnside's Lemma	58
Further Reading	59
Exercises	59
3. Connecting Symmetries and Data: Linear Representations	63
3.1 Introduction	63
3.2 Representations	63
3.3 Unitary Representations	66

3.4	Regular Representations and Group Algebras	68
3.5	Tensor Representations	69
3.6	Matrices with Group Symmetry	70
3.7	Reducibility	74
3.8	Schur's Lemma	79
3.9	Constructing the Irreducible Representations of $S_n$	82
	Further Reading	87
	Exercises	88
4.	Data Reduction and Inference: The Canonical Projections and Their Invariants	91
4.1	Introduction	91
4.2	Characters of a Linear Representation	91
4.3	Orthogonality Relations for Characters	92
4.4	The Canonical Projections	101
4.5	The Standard Decomposition	112
4.6	Harmonic Analysis	117
	Exercises	122
5.	Examples and Techniques	128
5.1	Introduction	128
5.2	Analysis of Variance	128
5.3	Classical Structures and Their Analysis of Variance	130
5.4	The Analysis of Variance for Dihedral Data	134
5.5	Cyclic Reduction of Binary Sequences	134
5.6	Dihedral Reduction of Binary Sequences	136
5.7	Projections in the Space of Scalar-Valued Functions	138
5.8	Decompositions in the Dual Space	139
5.9	Canonical Decompositions of Entropy Data	148
5.10	A Two-Way Cyclic Decomposition	153
5.11	Data Structures Induced by Point Groups	154
5.12	Data Indexed by Homogeneous Polynomials	156
5.13	Likelihood Decompositions	158
	Further Reading	160
	Exercises	161
6.	Symmetry Studies of Short Symbolic Sequences	165
6.1	Introduction	165
6.2	Symmetry Studies of Four Sequences in Length of 3	165
6.3	Reductions by Position Symmetry	166
6.4	Reductions by Symbol Symmetry	171
6.5	Dihedral Studies	173
	Further Reading	175
	Exercises	175
	Appendix A	177
	Appendix B	178

Cambridge University Press

978-0-521-84103-0 - Symmetry Studies: An Introduction to the Analysis of Structured Data in Applications

Marlos A. G. Viana

Table of Contents

[More information](#)*Contents*

vii

7. Symmetry Studies of Curvature Data	180
7.1 Introduction	180
7.2 Keratometry	181
7.3 Astigmatic and Stigmatic Constraints	181
7.4 Ranking Permutations	182
7.5 Classification of Astigmatic Mappings	185
7.6 Astigmatic Covariance Structures	190
7.7 Dihedral Fourier Analysis	190
Further Reading	194
Exercises	195
Appendix A	198
Appendix B	199
Appendix C	200
8. Symmetry Studies of Planar Chirality	201
8.1 Introduction	201
8.2 Characterizing Rotations and Reversals	203
8.3 Canonical Classification of Handedness in Elementary Images	205
8.4 Handedness of Short Symbolic Sequences	211
Further Reading	213
Exercises	214
Appendix A	217
Appendix B	218
Appendix C	220
<i>Appendix A: Computing Algorithms</i>	221
<i>Appendix B: Glossary of Selected Symbols, Notations, and Terms</i>	225
<i>Bibliography</i>	227
<i>Index</i>	233
