<i>About the cover</i>	<i>page</i> xii
<i>Preface</i>	xv
1 Introduction	1
1.1 A brief history of biomechanics	3
1.2 An outline of this book	12
References	15
2 Cellular biomechanics	19
2.1 Introduction to eukaryotic cellular architecture	19
2.2 The cell's energy system	22
2.3 Overview of the cytoskeleton	25
2.3.1 Actin filaments 27 / 2.3.2 Intermediate filaments 28 /	
2.3.3 Microtubules 29	
2.4 Cell–matrix interactions	31
2.5 Methods to measure the mechanical properties of cells and biomolecules	35
2.5.1 Atomic force microscopy 36 / 2.5.2 Optical trapping (“optical tweezers”) 42 / 2.5.3 Magnetic bead microrheometry 42 / 2.5.4 Micropipette aspiration 44	
2.6 Models of cellular biomechanical behavior	55
2.6.1 Lumped parameter viscoelastic model of the cell 55 /	
2.6.2 Tensegrity model of the cytoskeleton 61 / 2.6.3 Modeling actin filaments as a foam 70 / 2.6.4 Computational model of a chondrocyte in its matrix 74	
2.7 Mechanotransduction: how do cells sense and respond to mechanical events?	77
2.7.1 Mechanoreceptors 78 / 2.7.2 Intracellular signal transduction 79 / 2.7.3 Cellular response to mechanical signals 81	

2.8	Techniques for mechanical stimulation of cells	82
	2.8.1 Compressive loading 82 / 2.8.2 Stretching 84 /	
	2.8.3 Fluid flow 89	
2.9	Summary of mechanobiological effects on cells in selected tissues	92
	2.9.1 Endothelial cells in the vascular system 92 /	
	2.9.2 Smooth muscle cells in vascular tissue 94 /	
	2.9.3 Chondrocytes in articular cartilage 95 / 2.9.4 Osteoblasts and osteocytes in bone 97	
2.10	Problems	100
	References	113
3	Hemodynamics	121
3.1	Blood rheology	121
	3.1.1 Blood composition 123 / 3.1.2 Relationship between blood composition and rheology 127 / 3.1.3 Constitutive equation for blood 132	
3.2	Blood flow in large arteries	134
	3.2.1 Physical characteristics of blood flow patterns in vivo 134 / 3.2.2 Steady blood flow at low flow rates 135 /	
	3.2.3 Unsteady flow in large vessels 142	
3.3	Blood flow in small vessels	145
	3.3.1 Fahraeus–Lindqvist effect 146 / 3.3.2 “Inverse” Fahraeus–Lindqvist effect 149	
3.4	Problems	150
	References	164
4	The circulatory system	167
4.1	Anatomy of the vasculature	167
4.2	The heart	172
	4.2.1 Gross anatomy of the heart 174 / 4.2.2 Qualitative description of cardiac pumping 175 / 4.2.3 Cardiac pumping power and ventricular function 178	
4.3	Arterial pulse propagation	182
	4.3.1 Systolic and diastolic pressure 182 / 4.3.2 Windkessel model 183 / 4.3.3 Arterial wall structure and elasticity 186 / 4.3.4 Elastic waves 189 / 4.3.5 Pressure–flow relationships: purely oscillatory flow 197 / 4.3.6 Pressure–flow relationships: mean flow effects 200 / 4.3.7 Pressure–flow relationships: deviations from ideality 201	

4.4	The capillaries	207
	4.4.1 Capillary filtration: the experiments of Landis 210 /	
	4.4.2 Osmotic pressure 212 / 4.4.3 Quantitative analysis of	
	capillary leakage 214	
4.5	The veins	215
4.6	Scaling of hemodynamic variables	216
4.7	Problems	221
	References	238
5	The interstitium	243
5.1	Interstitial fluid flow	243
	5.1.1 Darcy's law 244 / 5.1.2 Clearance of edema 245	
5.2	Problems	251
	References	252
6	Ocular biomechanics	253
6.1	Ocular anatomy	253
6.2	Biomechanics of glaucoma	254
	6.2.1 Tonometry 255 / 6.2.2 Drainage of aqueous humor in	
	normal and glaucomatous eyes 260 / 6.2.3 Aqueous humor	
	circulation in the anterior chamber 266 / 6.2.4 Optic nerve head	
	biomechanics 268	
6.3	Ocular blood flow	275
6.4	Problems	277
	References	279
7	The respiratory system	285
7.1	Gross anatomy	285
	7.1.1 The conducting airways and pulmonary	
	vasculature 285 / 7.1.2 Associated structures 289	
7.2	Biomechanics of breathing	289
7.3	Lung elasticity and surface tension effects	291
7.4	Mass transfer	296
	7.4.1 Blood-side acinar mass transfer 298 / 7.4.2 Air-side	
	acinar mass transfer 309 / 7.4.3 Whole lung mass transfer 311	
7.5	Particle transport in the lung	316
7.6	Problems	319
	References	331

8 Muscles and movement	334
8.1 Skeletal muscle morphology and physiology	335
8.1.1 Isotonic versus isometric contraction	341
8.2 Muscle constitutive modeling	344
8.3 Whole muscle mechanics	352
8.3.1 Parallel versus pinnate muscle types	353
8.4 Muscle/bone interactions	355
8.4.1 Foreleg motion in two species	355
8.4.2 Flexion of the elbow	357
8.4.3 Biomechanics of the knee	366
8.5 Problems	371
References	378
9 Skeletal biomechanics	381
9.1 Introduction to bone	381
9.2 Composition and structure of bone	384
9.2.1 Cortical bone	386
9.2.2 Trabecular bone	386
9.3 Biomechanical properties of cortical and trabecular bone	389
9.3.1 Cortical bone mechanics	390
9.3.2 Trabecular bone mechanics	391
9.3.3 Trabecular bone mechanics: density dependence	392
9.3.4 Trabecular bone mechanics: unit cell models	394
9.4 Bone fracture and failure mechanics	397
9.4.1 Fast fracture	399
9.4.2 Fatigue fracture	403
9.5 Functional adaptation and mechanobiology	410
9.6 The design of bone	412
9.7 Introduction to soft connective tissues	414
9.8 Structure of collagen	415
9.9 Structure of ligament, tendon, and cartilage	416
9.9.1 Ligament	416
9.9.2 Tendon	418
9.9.3 Cartilage	419
9.10 Biomechanical properties of ligament, tendon, and cartilage	422
9.10.1 Structural properties	423
9.10.2 Material properties	426
9.10.3 Material properties: tension	426
9.10.4 Material properties: compression	429
9.10.5 Material properties: viscoelasticity	432
9.10.6 Material properties: biphasic mixture theory of cartilage	438
9.11 Problems	439
References	442

C. Ross Ether and Craig A. Simmons

Table of Contents

[More information](#)**xi** Contents

10 Terrestrial locomotion	446
10.1 Jumping	446
10.1.1 Standing jump 446 / 10.1.2 Running jump 450	
10.2 Description of walking and running	453
10.2.1 Walking 453 / 10.2.2 Running 461	
10.3 Gait analysis	463
10.3.1 Kinematics 464 / 10.3.2 Anthropometry 470 /	
10.3.3 Kinetics 474	
10.4 Problems	483
References	491
<i>Appendix The electrocardiogram</i>	492
<i>Index</i>	501
