<i>Preface</i>	<i>page</i> xv
<i>Acknowledgments</i>	xx
<i>List of abbreviations</i>	xxii
Prologue	1
Notes and references	4
1 The planets: their formation and differentiation	5
1.1 Planetary formation	5
1.2 The solar nebula and the giant planets	8
1.2.1 The depletion of the volatile elements in the inner nebula	11
1.3 Planetesimals and the accretion of the terrestrial planets	14
1.4 The random nature of terrestrial planet formation	18
1.4.1 Meteorites and planetary composition	20
1.4.2 Uncompressed density and bulk planetary compositions	21
1.5 Types of crusts	22
1.6 Geochemical processes during crust formation	23
1.6.1 Europium as a universal tracer	25
Synopsis	26
Notes and references	27
2 A primary crust: the highland crust of the Moon	32
2.1 The composition of the Moon	32
2.2 The lunar surface	36
2.3 Structure of the crust	37
2.3.1 Tectonics	38
2.3.2 Lunar stratigraphy	38
2.4 Craters and multiring basins	40
2.4.1 A lunar cataclysm?	42
2.5 Composition of the lunar highland crust	44

Table of Contents

[More information](#)

viii	<i>Contents</i>	
	2.5.1 Anorthosites	45
	2.5.2 KREEP	48
	2.5.3 The Mg-suite	50
	2.5.4 Lunar highland terranes	51
	2.5.5 The Cayley Plains: a cautionary tale	53
	2.5.6 Tektites and the Moon	54
	Synopsis	54
	Notes and references	55
3	A secondary crust: the lunar maria	61
	3.1 The maria	61
	3.1.1 Mare basalt ages	63
	3.2 Composition of the mare basalts	64
	3.2.1 The interior of the Moon	68
	3.3 Origin of the mare basalts	71
	3.3.1 An impact origin?	72
	3.4 The magma ocean	73
	3.4.1 The depletion in europium	75
	3.4.2 Depth of melting	76
	3.5 Large-impact model for lunar origin	77
	Synopsis	80
	Notes and references	81
4	Mercury	86
	4.1 The planet	86
	4.1.1 The composition and internal structure of Mercury	87
	4.2 Origin of Mercury	88
	4.3 Surface structure	89
	4.3.1 The heavily cratered terrain	90
	4.3.2 The intercrater plains	90
	4.3.3 The Caloris Basin: a mercurian cataclysm?	91
	4.3.4 The smooth plains	92
	4.4 The origin of the plains: a Cayley Plains analog?	93
	4.4.1 Lobate scarps	94
	4.5 The crust of Mercury	95
	4.5.1 Primary and secondary crusts on Mercury?	97
	4.5.2 Atmosphere	98
	Synopsis	98
	Notes and references	99
5	Mars: early differentiation and planetary composition	103
	5.1 The origin of Mars	103
	5.1.1 A volatile-rich and oxidized planet	104

<i>Contents</i>		ix
5.2	The interior of Mars	104
5.2.1	Core	105
5.2.2	Mantle	106
5.2.3	Crust	108
5.3	Martian stratigraphy	108
5.4	Cratering record and the age of the martian surface	110
5.4.1	Crustal dichotomy	111
5.4.2	Quasi-circular depressions	111
5.4.3	Tharsis and Valles Marineris	112
5.5	Early plate tectonics?	114
5.5.1	Crustal magnetization and plate tectonics	114
5.6	Samples from Mars	115
5.6.1	Martian meteorites	115
5.6.2	Shergottite crystallization ages	121
5.7	Early differentiation on Mars and magma oceans	122
5.8	Multiple reservoirs and the age of the earliest crust	125
5.9	The composition of Mars	126
5.9.1	A cautionary note	130
	Synopsis	131
	Notes and references	132
6	Mars: crustal composition and evolution	141
6.1	Sampling martian crust	141
6.2	Crustal dimensions	142
6.2.1	Hypsometry	143
6.3	Igneous diversity in a basaltic crust	144
6.3.1	SNC meteorites and crustal contamination	146
6.3.2	Hemispheric dichotomy, Surface Types 1 and 2 and martian andesites	148
6.3.3	Gusev plains and Meridiani Planum	150
6.3.4	Alkaline volcanism and the Columbia Hills	150
6.4	The sedimentary rock cycle on Mars	152
6.4.1	Water, wind and ice	152
6.4.2	Surficial processes	155
6.4.3	Soils and dust	157
6.4.4	Sedimentary rocks on Mars	159
6.4.5	Meteoritic components	162
6.5	Bulk composition of the crust	163
6.5.1	Compositional evolution of the martian surface	166
6.6	Heat flow and crustal heat production	167
6.6.1	Compositional variation with depth	167

x	<i>Contents</i>	
6.7	Crustal evolution on Mars	168
6.7.1	Tertiary crusts on Mars?	170
	Synopsis	171
	Notes and references	172
7	Venus: a twin planet to Earth?	181
7.1	The enigma of Venus	181
7.2	Surface features of Venus	182
7.2.1	Plains	182
7.2.2	Channels	183
7.2.3	Volcanoes	184
7.2.4	Coronae	185
7.2.5	Tesserae	186
7.2.6	Ishtar Terra and Aphrodite Terra	186
7.3	Impact craters and the age of the surface	186
7.4	Heat production and rates of volcanism	190
7.4.1	A one-plate planet	191
7.5	Crustal composition	192
7.5.1	Pancake domes: rhyolites on Venus?	194
7.5.2	The differentiation of Venus	196
7.6	The geological history of Venus	197
7.6.1	Water on Venus	199
	Synopsis	201
	Notes and references	202
8	The oceanic crust of the Earth	207
8.1	The sea floor and plate tectonics	207
8.2	Structure of the oceanic crust	208
8.3	Mid-ocean ridges	209
8.3.1	Formation processes at mid-ocean ridges	211
8.4	Mid-ocean ridge basalts (MORB)	211
8.4.1	Interaction with seawater	215
8.5	Oceanic island basalts (OIB)	216
8.6	Composition of the oceanic crust	217
8.7	Mantle structure	218
8.7.1	Mantle plumes	220
8.8	Composition of the Earth	222
8.8.1	Core	223
8.8.2	Mantle	223
	Synopsis	226
	Notes and references	227

<i>Contents</i>		xi
9	The Hadean crust of the Earth	233
9.1	The Hadean crust and mantle	233
9.2	A terrestrial magma ocean	234
9.3	The early crust	235
9.3.1	The bombardment record	236
9.4	The early continental crustal myth	237
9.5	Isotopic constraints: ^{142}Nd and ^{176}Lu	239
9.5.1	Mantle keels in the Hadean?	241
9.6	A model for the Hadean	242
Synopsis		243
Notes and references		244
10	The Archean crust of the Earth	249
10.1	The Archean	249
10.1.1	The earliest Archean rocks	251
10.1.2	Akilia island, southwest Greenland	252
10.2	The Archean upper crust	252
10.2.1	Archean high-grade terrains	254
10.3	The Archean bulk crust	255
10.3.1	The Archean oceanic crust	255
10.3.2	Heat flow in the Archean	257
10.4	The formation of the TTG suite	258
10.4.1	Adakites and the TTG suite	259
10.4.2	The evidence from sanukitoids	260
10.5	Plate tectonics in the Archean?	261
10.5.1	The subcrustal lithosphere and mantle keels	263
10.6	Meteorite impacts in the Archean	264
Synopsis		265
Notes and references		266
11	The Post-Archean continental crust	275
11.1	The Archean–Proterozoic transition	275
11.2	Changes in crustal composition during the Archean–Proterozoic transition	277
11.3	The Post-Archean upper crust	279
11.3.1	Paradoxes: niobium and lead	286
11.4	The lower crust (Post-Archean)	287
11.4.1	Anorthosites	288
Synopsis		289
Appendices		290

Contents

	Area, thickness and density of the present continental crust	290
	Age of the continental crust	291
	Sedimentary rocks as crustal samples	292
	Notes and references	293
12	Composition and evolution of the continental crust	301
12.1	Heat flow constraints	302
12.2	Composition of the bulk crust	304
12.3	The andesite model	305
	12.3.1 Delamination and its problems	306
	12.3.2 The formation of andesites	307
	12.3.3 Granites and granites	309
12.4	Alternatives: basaltic compositions	311
12.5	Alternatives: felsic compositions	312
12.6	Crustal growth and its episodic nature	313
	12.6.1 The freeboard constraint	313
	12.6.2 Recycling	314
	12.6.3 Continental break-up and assembly	315
	Synopsis	316
	Notes and references	317
13	Crusts on minor bodies	325
13.1	Minor bodies in the Solar System	325
13.2	Observational problems	327
	13.2.1 Nanophase iron	328
	13.2.2 Eros and Itokawa	329
13.3	Vesta, a differentiated asteroid	330
	13.3.1 Evolution of Vesta	331
	13.3.2 Eucrites and the Moon	332
13.4	The Galilean satellites	332
13.5	The extraordinary crust of Io	333
	13.5.1 Volcanic activity	333
	13.5.2 Mountains	335
	13.5.3 Nature of the crust	335
13.6	The thick icy crust of Europa	337
13.7	Two crusts on Ganymede	338
13.8	Callisto, an ancient crust	339
13.9	Sand dunes on Titan	340
13.10	Nitrogen ice on Triton	343
	Synopsis	344
	Notes and references	345
