neuropsychiatric syndromes 625
catastrophic reaction 625
left hemispheric strokes, clinical approach 6–8.
See aphasia
post stroke depression (PSD) 625
limb kinetic apraxia (LKA) 39
mania 539
primary and secondary mania 539
memory 407–8. See episodic memory; episodic memory, disorders
explicit memory 407
implicit memories 407
memory processing systems, strokes affecting 408, 417–8
hemispheric lesions, language dominant 417–8
motor memory, left hemispheric lesions 418
middle cerebral artery (MCA) 166
misidentification delusion 513–5
amygdala, significance of 514
monothematic delusions, types 510
motor aphasias 54
agrammatism 55
economy of effort 55
articulated language 54
motor and gestural disorders (abnormal movement and motor behavior) 15.
See permanent movement disorders
focal lesions 15
transient movement disorders 16–21.
See hemiballism—hemichorea
neural substrates, parietal lobe interface 48
non-unilateral disorders 231–4
critical disorders (defective/ productive) 233–4
Alice in Wonderland syndrome 234
depersonalization 233
Heautoscopy and out-of-body experience 234
delusional disorders (defective/productive) 232–3
body dysmorphic disorder 233
conversion hysteria 232
Cotard’s syndrome 232
eating disorders 232
Ekberg syndrome 233
Koro syndrome 232
possession and lycanthropy 233
self-induced harm 233
indifferent disorders (defective/productive) 231–2
akinetic mutism and catatonia 231
pain asymbolia 231
whole body hallucinations 232
object and color visual agnosias 335
achromatopsia (color agnosia) 339–40
apperceptive agnosia 336–7
form agnosia 336–7
integrative agnosia 337
characteristics 340
clinical assessment 342–5
drawing/copying from memory 343
error analysis 342
matching tests 343–4
non-visual object recognition 342
perception/categorization, colors 344
object agnosia 336–41
prognosis and management 344–5
semantic access/associative agnosia 337–9
semantic knowledge, loss of 339
strokes 341–2
visual agnosias 335–6
apperceptive stage 335
associative stage 335
causes 341
optic aphasia 335
optic ataxia (OA) 40
paroxysmal dyskinesia 21
See dystonia; thalamic tremor; vascular generalized chorea; vascular parkinsonism
phonological loop, impairment 433–6
assessment 433–41
deficits, stroke patients 434–6
semantic short-term storage abilities 436
neuropsychological test batteries 434
lexico-semantic characteristics 435–6
aphasic syndrome 434
posterior cerebral artery (PCA) 169
spatial neglect (in stroke) 162–4.
See also anatomical correlates and subtypes; functional neuroanatomy and subdivisions
acute right hemisphere stroke 158
acute stroke, frequency 163
brain lesions, focal strokes 168
cancellation tasks 175, 176
clinical assessment 173–40
common neglect batteries 174
crossed responses, usage 178
drawing tasks 176
extinction testing, different positions 174
head and gaze, spontaneous deviation 174
near/far extrapersonal space, performance 178
reading deficits 177
spatial domain, examination 174
tactile exploration 177
crossed symptoms 164
hemispheric asymmetry 164
land mark task 177
left visual spatial neglect 150
line bisection 177
management and treatment 182
motor extinction, tests for 178
neurocognitive model 167
non-spatial deficits, tasks 179
recovery and prognosis 181–2
representational neglect, useful tests 178, 179
RHD patient, examination 163
right neglect, frequency 163
spatial attention, computerized tests 179
strokes responsible for 166
unilateral RHD/LHD 164
posterior cerebral arteries (PCA) 411–3
posterior strokes, clinical approach 8–10.
See visual agnosia
agnosic alexia 9
agnosic deficits 8
akinetoptopia (motor blindness) 10
Anton’s syndrome 8
cognitive deficits 8
cognitivo-behavioral assessment 10
Color vision, cognitive evaluation 9
prosopagnosia 9
poststroke delusion 510. See Capgras syndrome;
misidentification delusion
anosognosia, delusional disorders 515–6.
See also anosognosia
assessment 516
delusional misidentification syndromes 510
Fregoli delusion 511
intermetamorphosis delusion 511
outcome and treatment 516–7
stroke and delusion 512–3
characteristics 513
delusion, frequency of 512–3
grandiose delusional ideation 513
poststroke depression (PSD) 548, 563, 573
specificity 548
poststroke fatigue (PSF) 573–6. See also poststroke depression (PSD)
assessment 202, 578–81
objective component 579
subjective component 578
depression, overlap with 574, 583
guidelines, clinician 40
incidence and time-course 573
management and treatment 581–3
motor disability and vegetative symptoms 575
nature 574–5
sleep disturbances, post-stroke 575
stroke outcome, impact on 573–6
poststroke mania 539, 542. See mania
assessment 544
associated stroke 543
characteristics 539
DSM-IV-TR criteria, mood disorder 540
strokes responsible 543
symptoms 542
treatment and outcome 544–5
prosopagnosia 315
assessment 326
associated deficits 315, 320
environmental familiarity, loss of 320
temporo-occipital junction, lesions 320
vectorial orientation impairment 320
characteristics 317
epiphology 317
general presentation 315–7
lesion localization 317–20
Brodmann area 20 320
fusiform face area (FFA) 319
quadranetonopia 318
lesion 319
neuropsychological assessment 324–6
Benton face recognition test 322
Birmingham Object Recognition Battery (BORRB) 325
Incomplete letters test 325
Shape detection screening test 325
Visual Object and Space Perception Battery (VOSP) 325
Wechsler Adult Intelligence Scale (WAIS) 324
Wechsler Memory Scale (WMS III) 324
prognosis and management 327–9
sub types 321–4
diagnostic information, face recognition 323
face stimulus areas, brain-damaged patient 323
strokes 320
posterior cerebral artery infarcts (PCAI) 317
psychotic disorder, DSMIV diagnostic criteria 311
pure motor aphasia/cortical motor aphasia
aphemia/verbal apraxia 59. See aphasia in stroke
cortical dysarthria 59
localization 59
pure word deafness (PWD) 354, 359
neuropsychological tests 354
phonic perception, assessment of 354
psychoacoustical analysis 355
verbal auditory agnosia 354
verbal auditory comprehension 354
right hemisphere damage (RHD) 41
right hemisphere syndromes 626–9
cognitive syndromes 626
amnesia 626
left sided motor neglect 626
right PCA cortical stroke 627
right thalamus damage 627
Index

right hemisphere syndromes (cont.)
unilateral spatial inattention 626
neuropsychiatric syndromes 627–9
anosognosia 628
aphasia 628
behavioral changes 627
delirium 627
emotionl incontinence 629
generalized anxiety disorder 628
mania 628
post-stroke atypical schizophreniform 629
right hemispheric strokes, clinical approach 4–6.
See spatial neglect
allocentric/egocentric space, effect on 6
hyperacute phase, occurrence in 5
right vs. left hemisphere (brain) syndromes 617, 620. See left hemisphere
syndromes: right hemisphere syndromes
bilateral cortical/subcortical lesions, syndromes
due to 629–30
cerebral specialization, ontogenesis 618
left hemisphere 617
right hemisphere 617
emotions, distinct 618
functional asymmetry 617
hemispheric dominance, reversal 619–25
Selective Serotonin Reuptake Inhibitors (SSRIs)
555, 562, 564
sensory aphasia 60. See also Wernicke’s aphasia
anomia 62
anomic aphasia 62
auditory agnosia 60
conduction aphasia 61
central aphasia 61
deep dysphasia 62
cortical deafness 60
isolation syndrome/mixed transcortical aphasia 62
language comprehension 60
neologisms/phonemic paraphasia 61
neologistic jargon 60
pure word deafness 60
semantic aphasia 63
semantic jargon 61
transcortical sensory aphasia 62
semantic dementia 62
spatial memory, right hemispheric lesions 418–21
EEG data 418
strategic/executive systems, strokes affecting 419
deficits, memory 419
frontal strokes, potential effects 419
human frontal lesions, effects 419–20
medial lesions 421
true amnesia 420
spatial neglect 4
behavioral assessment 5
clinical evaluation 5
motor impairments, tests for 5
psychometric testing 5
visual/auditory extinction 5
rehabilitation 6
spatial neglect, anatomical correlates and subtypes 165–73
attention, local biases 173
attentional deficits, non-spatial 173
cerebrovascular topographic associations 166–9
subcortical cases 168
cortical parietal neglect, spatial 165
far/ near space neglect 173
frontal neglect, impairments 172
functional neuroimaging studies 166
hemi/plegia 173
motor neglect 172
perceptual and premotor aspects, parietal
lesions 171
perceptual extinction 153, 172
questions 168, 172
egocentric/allocentric defects 172
representational neglect 173
stroke unit, behavioral/cognitive disorders 1.
See neurophysiological syndromes. See also stroke, behavioral/cognitive neurology
acute phase (cognitive evaluation) 10
acute stroke, evaluation in 3
reasons 3
chronic impairments 2
evaluation difficulty 2–3
investigating studies 2
modular neuropsychological models 1
neurophysiological syndromes (disorders) 4–10
acquired stroke, factors affecting 4
types 4
neurophysical examination, aim 1
underestimation, ways to avoid 2–3
stroke and personality change 529, 531–4.

character, dimensions 529
DSM-IV TR diagnostic criteria 531
dysexecutive syndrome 532
frontolimbic network, dysfunction 534
mood disorders 532
personality, definition 529
personality disorder 530, 536
poststroke depression, risk of 534–5
neuroticism 535
poststroke emotional incontinence 533
pseudodublar syndrome 533
pseudopsychopathy 534
receptive aprosodia 532
temperament, dimensions 529
violent and aggressive behavior, poststroke 533
stroke, behavioral/cognitive neurology 520.
See stroke patients, assessments
behavioral modifications 522–4
apathy 523
athymormia 523
catastrophic reaction 522
eating behavior, modifications 524
emotionalism 522
Kleptomania 524
Klüver-Bucy syndrome 524
sexual behavior, modification 523
clinical presentation 520
mood changes 520
emotional modifications 520–2
aggressiveness and anger 521
behavioral component 520
fear 522
happiness and pleasure 521
joy and ‘fou-rire prodromique’ 521
physiological reactions 520
sadness 521
subjective feeling 520
prognosis and management 526
stroke patients, assessments 524–6
behavioral modifications 525
emotional modifications 524
stroke patients, working memory dysfunctions 431–41.
See central executive, impairment; phonological loop, impairment; visuospatial sketchpad, impairment; working memory, See also episodic memory; memory
Subcortical Ischemic Vascular Dementia (SIVD) 596
subcortical stroke aphasia 63
superior parietal lobule (SPL) 40
thalamic tremor 25–7
lesions, location of 25
mid-brain tremor, similarity 26
pathophysiological mechanisms, role 25
treatments 27
temporoparietal junction (TPJ) 166, 169
topographical disorientation 269
anterograde disorientation 271
assessment 274–6
Block-Tapping Task 275
clinical examination 274–5
neuropsychological assessment 275–6
associated with
central achromatopsia 270
hemianopia 270
prosopagnosia 270
spatial memory deficit 270
egoecentric disorientation 271
heading disorientation 271
main characteristics 272
management 275, 276
prosopagnosia 271
reduplicative paramnesia 270
environments, non-recognition of 271
retrieval, problem of 271
stroke (affecting brain regions) 272–4
characteristics 273
main types 274
transcortical motor aphasia 59. See aphasia in
stroke
dyssynergic aphasia 59
anterior cerebral artery stroke 59
supplementary motor/speech area 59
vascular dementia (VaD) 586;
See also Binswanger’s disease; CADASIL
amyloid angiopathies 600
amyloid deposition, types 600
hereditary cystatin C amyloid angiopathy
(HCAA) 600
hereditary types 600
oculopleomingual amyloidosis 601
arteriolethiopathies, others 399
assessment 604–6
Binswanger’s disease 595–6. See Subcortical Ischemic Vascular Dementia (SIVD)
CADASIL 596–9
categories 590–3
causes 590
definition and diagnostic criteria 587–90
DSM-IV criteria 587, 608
Hachinski ischemic score 589
ICD-10 Research Criteria (DCR-10) 589
mixed dementias 587
NINDS–AIREN criteria 588
identification, failures 586
mechanisms 594
multi-infarct dementia 271
multiple brain hemorrhages, dementia related to 600–1
multiple deep infarcts/leucoencephalopathy 595–9, 605
single vascular lesion/single stroke dementia 591–3
capsular genu infarction 593
cortical stroke 591
isolated caudate vascular lesions 593
subcortical stroke 592
thalamic infarctions 592
neuropsychological assessment 606, 607
behavioral inventories 606
screening tests 606
