The Life and Death of Smallpox

This is an engaging and fascinating story of a conditional human success story. Smallpox has been one of the most devastating scourges of humanity throughout recorded history, and it is the only human illness to have been eradicated, though polio may soon follow it to official extinction through human agency. However, while smallpox is officially extinct in nature, our fears that stocks of smallpox virus may return as a weapon of bioterrorists have led to the stockpiling of vaccine, and continuing vigilance, even though the official victory over smallpox is now 15 years old. *The Life and Death of Smallpox* presents the entire engaging history of our struggle and ultimate (?) victory over one of our oldest and worst enemies. The story of the campaign to track down and eradicate the virus, throughout the world – the difficulties, setbacks, and the challenges successfully met – is a highlight of a fascinating book, but we cannot be confident of the ending. The final chapter of the book clearly and authoritatively explains the current status of the threat from the deliberate release of smallpox or other potential agents of biological terrorism.

Ian Glynn is Professor Emeritus of Physiology at Cambridge University and Fellow of Trinity College. He is the author of *An Anatomy of Thought* (1999). Jenifer Glynn is a Cambridge historian and author of *Tidings From Zion* (2000).

28. 'Paris: la vaccination dans la rue'. From *L'Illustration*, September 1893

29. Camelpox, reproduced by permission of the WHO, Geneva

30. Maps showing countries where smallpox was endemic in 1900, 1959 and 1967. Reproduced by permission of the WHO, Geneva

31. Poster used in the eradication campaign in India. Reproduced by permission of the WHO, Geneva

32. Map of India showing the individual states and the Ganges plain. Reproduced by permission of the WHO, Geneva

33. Map of India showing the spread of smallpox from Jamshedpur in 1974. Reproduced by permission of the WHO, Geneva

34. Rahima Banu, the last case of naturally occurring variola major in the world. Reproduced by permission of the WHO, Geneva

35. Ali Maow Maalin, the last case of naturally occurring smallpox in the world. Reproduced by permission of the WHO, Geneva

Acknowledgements

Writing the biography of a subject whose known life extended through three millenia and embraced five continents is a wide-ranging task, and we want to thank the many people whose help has made that task a pleasure. Graeme Mitchison, Douglas and Clare Fearon, Judith Glynn, Alan Glynn, Colin Franklin and Eckard Wimmer have read and criticised the entire text. Geoffrey Smith and Ian Ramshaw have given valuable advice on virology, Peter Lachmann on immunology, John Twigg on history. Seemingly endless questions have been answered by colleagues at Cambridge – Arnold Browne, Roger Dawe, John Easterling, Eric Handley, Simon Keynes, Sachiko Kusakawa, John Lonsdale, William St Clair, Peter Sarris. For errors that have survived this flood of advice, we accept responsibility.

The World Health Organization’s massive 1988 publication *Smallpox and its Eradication* (by Frank Fenner, Donald A. Henderson, Isao Arita, Zdenek Ježek, and Ivan D. Ladnyi) has been a mine of information, and we are very grateful to the Organization for generous permission to reproduce many illustrations. Laura Cordy has been a wonderful help in preparing these and other illustrations for publication.

We would particularly like to thank the director of the Jenner Museum in Berkeley, Gloucestershire, and the librarians of the University Library, the Geography Library, the Medical Library, the Needham Institute, and Trinity College Library, in Cambridge, and of the Royal Society of Medicine in London.
Finally we want to thank our agent Felicity Bryan, our editor Penny Daniel, and our publisher Andrew Franklin, for encouragement, advice and understanding during the successive stages of the book’s production.
