The Global Economy in the 1990s

The 1990s were an extraordinary, contradictory, fascinating period of economic development, one evoking numerous historical parallels. But the 1990s are far from being well understood, and their meaning for the future remains open to debate. In this volume, world-class economic historians analyze a series of key issues: the growth of the world economy; globalization and its implications for domestic and international policy; the sources and sustainability of productivity growth in the United States; the causes of sluggish growth in Europe and Japan; comparisons of the information technologies (IT) revolution with previous innovation waves; the bubble and burst in asset prices and their impacts on the real economy; the effects of trade and factor mobility on the global distribution of income; and the changes in the welfare state, regulation, and macro-policymaking. Leading scholars place the 1990s in a fuller long-run global context, offering insights into what lies ahead for the world economy in the twenty-first century.

Paul W. Rhode is the Zachary Taylor Smith Professor at the Economics Department of the University of North Carolina, Chapel Hill.

Gianni Toniolo is Professor of Economic History at the University of Rome “Tor Vergata” and Research Professor of Economics at Duke University, Durham, North Carolina.
The Global Economy in the 1990s

A Long-Run Perspective

Figures

1.1 Global Gini coefficients, 1900–2000  page 6
4.1 Decomposing the income gap between the euro area and the United States  79
4.2 Italy’s share of non-oil world exports and the dollar/euro exchange rate  82
4.3 Germany’s share of non-oil world exports and the dollar/euro exchange rate  82
4.4 Converging with the United States? Relative income per capita  85
4.5 Productivity growth  85
4.6 Annual hours worked  86
6.1 Annual growth in output per man-hour in the United States, 1874–2001  119
6.2 Shares of total horsepower generated by the main sources in US manufacturing, 1869–1954  121
6.3 Shares of computer equipment and software in the US aggregate capital stock, 1960–2001  122
6.4 Shares of electrified horsepower by US manufacturing sector in percentiles, 1890–1954  123
6.5 Shares of IT equipment and software in the US capital stock by sector in percentiles, 1960–2001  125
6.6 Percentage of US households with electric service and personal computers during the two technological epochs  126
6.7 The relative price of equipment with respect to consumption goods in the United States  127
6.8 US price indices for the products of two technological revolutions  127
6.9 Patents issued on inventions in the United States per million persons, 1890–2000  129
List of figures

6.10 Annual IPOs in the United States as a percentage of stock market value, 1890–2001 130
6.11 Investment in the United States by new firms relative to incumbents, 1890–2001 131
6.12 Waiting times to exchange listing in the United States, 1890–2001 132
6.13 Average age (in years) of the largest US firms with market values that sum to 10 percent of GDP, 1885–2001 133
6.14 The ratio of consumption to income in the United States, 1870–2001 134
6.15 The ex post real interest rate on commercial paper in the United States, 1870–2001 135

7.1 Real hourly wages in US manufacturing, 1890–1928 144
7.2 Real hourly US manufacturing wages, 1909–1940 146
7.3 US college enrollment as a percentage of the population aged eighteen to twenty-four, 1880–2002 148
7.4 Real hourly wages in the United States in 1982 dollars, 1950–2002 150
7.5 Real federal minimum wage in the United States, 1950–2000 152
7.6 Employment ratios in the United States, 1948–2004 156
8.5 Standard and Poor’s 500 stock market index, 1913:1984 to 1932:2003 alignment 170
8.6 The share in real US GDP of consumer durables plus total investment, 1919:1990 and 1932:2003 alignment 175
8.7 The shares in real US GDP of producer durable equipment and consumer durables, 1919:1990 to 1932:2003 alignment 176
8.8 The shares in real US GDP of residential and non-residential structures investment, 1919:1990 to 1932:2003 alignment 177
8.9 The share in real US GDP of inventory change, 1919:1990 to 1932:2003 alignment 178
List of figures

9.1 Real S&P 500 returns 1871–2003 and twentieth-century crashes 194
9.2 Boom and bust, 1920–1933 196

3.1 Merchandise exports as a percentage of GDP in 1990 prices, 1870–1998 45
3.2 Analysis of the migrant stock by region, 1965, 1975, 1985 and 1990 47
List of tables

3.3 Selected indicators of FDI and international production, 1982–1999
3.4 National regulatory changes affecting FDI, 1991–1999
3.5 Percentage shares of world exports
3.6 Net capital flows to developing countries, 1989–2003
3.7 Net official aid to developing countries, by type and source, 1990–2001
4.1 GDP growth in the United States, Japan, and the euro area
4.2 Per capita GDP growth in the United States, Japan, and the euro area
4.3 Productivity growth in the United States and the euro area
4.4 Employment growth in the United States and the euro area
4.5 The sources of growth
4.6 Determinants of countries’ shares of world exports
4.7 The United States’ and Europe’s growth in historical perspective
5.1 Compound annual growth rates of MFP, labor, and capital productivity in the US private non-farm economy, 1901–2000
5.2 The growth of MFP, labor, and capital productivity in manufacturing in the United States, 1919–2000
5.3 The employment of scientists and engineers in US manufacturing, 1927–1940
5.4 Changes in the uses and sources of saving in the United States, 1995–2000
5.5 The MFP contribution to labor productivity growth and acceleration in the United States, 1995–2000
5.6 Contributions to labor productivity acceleration in the United States
5.7 Sectoral contributions to MFP growth in the United States, 1995–2000
6.1 Rank correlations of electricity shares in total horsepower by manufacturing sector in the United States, 1889–1954
6.2 Rank correlations of IT shares in capital stocks by sector in the United States, 1961–2001
7.1 Growth rates of US GDP per capita and GDP per hour worked, 1870–2004
List of tables

7.2 Measures of wage inequality for weekly wages in the United States: full-time, full-year workers 151
8.2 Levels of selected macroeconomic variables in the United States, 1919–1929 and 1990–2000 165
9.1 Characteristics of booms and busts in the United States (end-of-month indices) 197
9.2 The dividend yield, earnings/price ratio and pay-out ratio in two booms in the United States 201
10.1 Military expenditure as a percentage of NNP or GDP 220
10.2 Capital flows of the largest lenders and borrowers, 1924–1930 225
10.3 Capital flows of the largest lenders and borrowers, 1990–1999 226
10.4 Percentage income shares of the top 1 percent of the population 227
10.5 Agricultural supports by the United States and European Union 230
11.1 How social transfers have changed in the OECD since the 1980s 236
11.2 Old-age tensions in OECD countries: projecting pension support and social transfers to 2020, using the aging effect alone 241
11.3 Heading the wrong way: employment rates since 1980, for men of ages fifty-five to sixty-four 248
11.4 Developing countries: projecting pension support and total social transfers to 2020 or the sample’s age boundary, using the aging effect alone 257

Preface

In the process of producing this volume the editors incurred numerous debts, which we can only partially repay with an expression of our gratitude here. The original versions of these papers were presented at the joint Duke–University of North Carolina conference on “Understanding the 1990s: the long-run perspective” held at the Terry Sanford Center on the Duke University campus in Durham, North Carolina, from 26–27 March 2004. This conference would not have been possible without the untiring efforts of Peggy East at Duke University. We would also like to thank Nancy Kocher at the University of North Carolina, and members of the program committee Peter Coclanis, Robert Keohane, Thomas Mroz, and Thomas Nechyba. Generous funding was provided by the Dickson Fund for the Study of Economics in History at the University of North Carolina Economics and History Departments, the Kenan Fund of the University of North Carolina Department of History, the Duke University Economics Department, the Duke Center for International Studies, and the European Studies Center. These contributions are greatly appreciated. We would also like to thank the discussants and participants for their valuable remarks, which led to lively discussion and debate at the conference and – ultimately – to better chapters in this volume. Among those deserving special thanks are Andrea Boltho, Michael Bordo, Paul David, Thomas Geragthy, Christopher Hanes, Richard Sylla, Ignazio Visco, John Wallis, and Barrie Wigmore. Finally, we would like to thank Andriy Gubachiov at Duke University and Lynn Dunlop and Chris Harrison at Cambridge University Press for their work in making this volume possible.
