<i>Preface</i>	<i>page</i> ix
<i>Acknowledgements</i>	xii
1 Geomorphology and the Great Barrier Reef	1
1.1 Introduction	1
1.2 The role of geomorphology in the understanding of coral reefs	3
1.3 A chronicle of geomorphology and reef research	5
1.4 The history of geomorphological study of the Great Barrier Reef to 1982	7
1.5 Outline of the following chapters	16
2 Foundations of the Great Barrier Reef	18
2.1 Introduction	18
2.2 Geological and geomorphological development of the coast	19
2.3 Evolution of the Coral Sea	27
2.4 The continental shelf of north-east Australia	30
2.5 The late establishment of the Great Barrier Reef	34
2.6 The Pleistocene Reef	37
2.7 Conclusion	40
3 Sea level: a primary control of long-term reef growth and geomorphological development	42
3.1 Introduction	42
3.2 Quaternary sea-level change	44
3.3 Late Pleistocene sea level	49
3.4 Postglacial sea level	58
3.5 Historical sea-level change on the Great Barrier Reef	87
3.6 Conclusion	90

Contents

4	Oceanography, hydrodynamics, climate, and water quality as influences on reef geomorphological processes	92
4.1	Introduction	92
4.2	The climate of the Great Barrier Reef region	94
4.3	Oceanography and hydrodynamics	99
4.4	High-frequency waves	111
4.5	High-intensity events	118
4.6	Mainland influences	125
4.7	Oceanographic and climatological stressors	135
5	Spatial analysis of the morphology of the reefs and islands of the Great Barrier Reef	138
5.1	Introduction	138
5.2	Remote sensing and the Great Barrier Reef	138
5.3	The history of spatial data collection and analysis	139
5.4	Great Barrier Reef lagoon areas and volumes	146
5.5	Reef and reef island statistics and classification	147
5.6	Reef types and reef management	162
5.7	Conclusion	165
6	The non-reefal areas of the continental shelf	166
6.1	Introduction	166
6.2	Surficial sediments	167
6.3	Subsurface sediments and the Pleistocene surface	171
6.4	Low sea-level drainage patterns	175
6.5	The age of shelf sediments	180
6.6	The <i>Halimeda</i> bioherms	183
6.7	Conclusion	190
7	Fringing and nearshore coral reefs	191
7.1	Introduction	191
7.2	Distribution and settings	192
7.3	Fringing reef structure	202
7.4	Holocene reef growth	207
7.5	Fringing reef morphology and processes	222
7.6	Conclusion	231
8	The mid-shelf reefs of the Great Barrier Reef	233
8.1	Introduction	233
8.2	The data base	235
8.3	Criteria used to classify the selected reefs	247
8.4	Evidence of morphological evolution from the internal structure of reefs	255

<i>Contents</i>		vii
8.5	Evolution of windward reef fronts	260
8.6	Rates of geomorphological development: discussion and conclusions	265
9	The coral reefs of the outer shelf of the Great Barrier Reef	271
9.1	Introduction: shelf-edge morphology	271
9.2	Modes of shelf marginal reef growth and major influences on the growth morphology	272
9.3	Detailed structure and evolution of the shelf-edge reefs	276
9.4	Conclusion	309
10	Islands of the Great Barrier Reef	311
10.1	Introduction	311
10.2	Classification and geomorphology of reef islands	315
10.3	Island distribution	343
10.4	Reef island formation	346
10.5	Reef island dynamics	353
10.6	Discussion: reef island prospects and potentials	360
10.7	Conclusion	365
11	The accumulation of the Holocene veneer to the Great Barrier Reef	367
11.1	Introduction	367
11.2	The depth to the antecedent surface	368
11.3	The fabric of the Pleistocene foundation	370
11.4	Date of recolonization during the Holocene transgression	372
11.5	Rates of growth and accretion	375
11.6	The timing of reefs reaching modern sea level	380
11.7	Reef growth relative to sea-level rise	383
11.8	Holocene reef structure and facies development	386
11.9	Comparisons with reefs elsewhere	391
11.10	How does the Great Barrier Reef compare?	403
11.11	Conclusion	408
12	The Holocene evolution of the Great Barrier Reef province	411
12.1	Introduction	411
12.2	The glacial maximum low sea level – 20 000 years BP	412
12.3	The early transgression to 12 000 years BP	416
12.4	The start of the Holocene – 10 000 years BP	422
12.5	The final 2000 years of the transgression – 7000 years BP	424
12.6	The mid to late Holocene	426
12.7	Conclusion	429

Contents

13	Geomorphology's contribution to the understanding and resolution of environmental problems of the Great Barrier Reef	431
13.1	Introduction	431
13.2	Sediments and reefs	432
13.3	Nutrient excess and the Great Barrier Reef	442
13.4	Geomorphological assessment for conservation	447
13.5	Management of reef islands	450
13.6	Global climate change, geomorphology, and coral reefs	459
13.7	Conclusion	467
