## Contents

<b>List of exercises</b>	ix
<b>Preface to the series</b>	xv
<b>Preface</b>	xix
<b>1 The subjective interpretation of probability</b>	1
<b>2 Bayesian inference</b>	11
<b>3 Point estimation</b>	29
<b>4 Frequentist properties of Bayesian estimators</b>	37
<b>5 Interval estimation</b>	51
<b>6 Hypothesis testing</b>	59
<b>7 Prediction</b>	71
<b>8 Choice of prior</b>	79
<b>9 Asymptotic Bayes</b>	91
<b>10 The linear regression model</b>	107
<b>11 Basics of Bayesian computation</b>	117
11.1 Monte Carlo integration	119
11.2 Importance sampling	124
11.3 Gibbs sampling and the Metropolis–Hastings algorithm	128
11.4 Other (noniterative) methods for generating random variates	157
<b>12 Hierarchical models</b>	169
<b>13 The linear regression model with general covariance matrix</b>	191
<b>14 Latent variable models</b>	203
<b>15 Mixture models</b>	253
15.1 Some scale mixture of normals models	254
15.2 Other continuous and finite-mixture models	260
<b>16 Bayesian model averaging and selection</b>	281
16.1 Bayesian model averaging	282
16.2 Bayesian variable selection and marginal likelihood calculation	287

<b>17</b>	<b>Some stationary time series models</b>	297
<b>18</b>	<b>Some nonstationary time series models</b>	319
	<b>Appendix</b>	335
	<b>Bibliography</b>	343
	<b>Index</b>	353
