Contents

<i>Preface</i>	<i>page</i> ix
<i>Sources of quotations</i>	xii
<i>Acknowledgements</i>	xiii
1 Nuclei in the Cosmos	1
1.1 Nuclei	1
1.2 Primordial nucleosynthesis	6
1.3 Reactions in light stars	9
1.4 Heavy stars	17
1.5 Explosive production mechanisms	21
1.6 Outlook	26
2 Reactions of nuclei	28
2.1 Kinds of states and reactions	28
2.2 Time and energy scales	31
2.3 Collisions	34
2.4 Cross sections	42
3 Scattering theory	48
3.1 Elastic scattering from spherical potentials	48
3.2 Multi-channel scattering	75
3.3 Integral forms	91
3.4 Identical particles	105
3.5 Electromagnetic channels	114
4 Reaction mechanisms	129
4.1 Optical potentials	129
4.2 Single-nucleon binding potentials	132
4.3 Coupling potentials	137
4.4 Inelastic couplings	141
4.5 Particle rearrangements	150

Table of Contents

[More information](#)

vi	<i>Contents</i>	
	4.6 Isospin transitions	158
	4.7 Photo-nuclear couplings	161
5	Connecting structure with reactions	173
	5.1 Summary of structure models	173
	5.2 Folded potentials	186
	5.3 Overlap functions	190
	5.4 General matrix elements	196
6	Solving the equations	200
	6.1 Elastic scattering	200
	6.2 Classifications	202
	6.3 Multi-channel equations	204
	6.4 Multi-channel bound states	215
	6.5 R-matrix methods	217
	6.6 Coupled asymptotic wave functions	226
7	Approximate solutions	229
	7.1 Few-body adiabatic scattering	229
	7.2 Eikonal methods	237
	7.3 First-order semiclassical approximation	245
	7.4 WKB approximation	247
8	Breakup	254
	8.1 Three-body wave equations	254
	8.2 Continuum Discretized Coupled Channel method	259
	8.3 Other breakup measures and methods	270
9	Three-body nuclei	274
	9.1 Definitions of halo and deeply bound states	274
	9.2 Three-body models for bound states	276
	9.3 Three-body continuum	285
	9.4 Reactions with three-body projectiles	287
10	R-matrix phenomenology	296
	10.1 R-matrix parameters	296
	10.2 Single-channel R matrix	297
	10.3 Coupled-channels R matrix	305
	10.4 Combining direct and resonant contributions	311
11	Compound-nucleus averaging	314
	11.1 Compound-nucleus phenomena	314
	11.2 Approximations neglecting interference	317
	11.3 Hauser-Feshbach models	318
	11.4 Level densities	327
	11.5 Average amplitudes and the optical model	329

Table of Contents

[More information](#)

	<i>Contents</i>	vii
12	Stellar reaction rates and networks	340
	12.1 Thermal averaging	340
	12.2 Reaction networks	350
	12.3 Equilibria	354
	12.4 Sensitivities to nuclear data	360
13	Connection to experiments	364
	13.1 New accelerators and their methods	364
	13.2 Detection	367
	13.3 Direct measurements	373
14	Spectroscopy	379
	14.1 Transfer spectroscopy	379
	14.2 Knockout spectroscopy	390
	14.3 Inelastic spectroscopy	394
	14.4 Breakup spectroscopy	396
	14.5 Charge-exchange spectroscopy	398
15	Fitting data	403
	15.1 χ^2 measures	403
	15.2 Fitting cross-section harmonic multipoles	409
	15.3 Fitting optical potentials	410
	15.4 Multi-channel fitting	412
	15.5 Searching	414
	Appendix A Symbols	419
	Appendix B Getting started with FRESKO	433
	<i>Select bibliography</i>	455
	<i>Index</i>	457
