<i>Preface to the second edition</i>	<i>page</i>	<i>ix</i>
<i>Preface to the first edition</i>		<i>xi</i>
1 Introduction		1
2 Linear irreversible thermodynamics		11
2.1 The conservation equations		11
2.2 Entropy production		17
2.3 Curie's theorem		20
2.4 Non-markovian constitutive relations: viscoelasticity		27
3 The microscopic connection		33
3.1 Classical mechanics		33
3.2 Phase space		44
3.3 Distribution functions and the liouville equation		46
3.4 Ergodicity, mixing, and Lyapunov exponents		53
3.5 Equilibrium time-correlation functions		59
3.6 Operator identities		62
3.7 The Irving-Kirkwood procedure		66
3.8 Instantaneous microscopic representation of fluxes		68
3.9 Microscopic representation of the temperature		77
4 The Green–kubo relations		79
4.1 The Langevin equation		79
4.2 Mori–Zwanzig theory		83
4.3 Shear viscosity		87
4.4 Green–Kubo relations for Navier–Stokes transport coefficients		92
5 Linear-response theory		95
5.1 Adiabatic linear response theory		95
5.2 Thermostats and equilibrium distribution functions		100

vi	<i>Contents</i>	
	5.3 Isothermal linear response theory	111
	5.4 The equivalence of thermostatted linear responses	116
6	Computer simulation algorithms	119
	6.1 Introduction	119
	6.2 Self diffusion	125
	6.3 Couette flow and shear viscosity	130
	6.4 Thermostatting shear flows	142
	6.5 Elongational flows	146
	6.6 Thermal conductivity	150
	6.7 Norton ensemble methods	152
	6.8 Constant-pressure ensembles	156
	6.9 Constant stress ensembles	160
7	Nonlinear response theory	167
	7.1 Kubo's form for the nonlinear response	167
	7.2 Kawasaki distribution function	169
	7.3 The transient time-correlation function formalism	173
	7.4 Trajectory mappings	177
	7.5 Differential response functions	185
	7.6 The van Kampen objection to linear response theory	193
	7.7 Time-dependent response theory	200
8	Dynamical stability	209
	8.1 Introduction	209
	8.2 Chaotic dynamical systems	211
	8.3 The characterization of chaos	221
	8.4 Chaos in planar couette flow	230
	8.5 Conjugate pairing of Lyapunov exponents	238
	8.6 Periodic orbit measures	244
	8.7 Positivity of transport coefficients	255
9	Nonequilibrium fluctuations	259
	9.1 Introduction	259
	9.2 The specific heat	260
	9.3 The compressibility and isobaric specific heat	265
	9.4 The fluctuation theorem	267
	9.5 Gallavotti and Cohen fluctuation theorem	274
	9.6 The Jarzynski equality	277

Cambridge University Press

978-0-521-85791-8 - Statistical Mechanics of Nonequilibrium Liquids: Second Edition

Denis J. Evans and Gary Morriss

Table of Contents

[More information](#)

	<i>Contents</i>	vii
9.7	The Crooks relation	280
9.8	Experimental verification	282
10	Thermodynamics of steady states	283
10.1	The thermodynamic temperature	283
10.2	Green's expansion for the entropy	292
10.3	Prospects	299
	<i>References</i>	301
	<i>Index</i>	309
