Preface *page* **xix**

1 A brief introduction to R **1**
1.1 An overview of R 1
1.1.1 A short R session 1
1.1.2 The uses of R 5
1.1.3 Online help 6
1.1.4 Further steps in learning R 8
1.2 Data input, packages and the search list 8
1.2.1 Reading data from a file 8
1.2.2 R packages 9
1.3 Vectors, factors and univariate time series 10
1.3.1 Vectors in R 10
1.3.2 Concatenation – joining vector objects 10
1.3.3 Subsets of vectors 11
1.3.4 Patterned data 11
1.3.5 Missing values 12
1.3.6 Factors 13
1.3.7 Time series 14
1.4 Data frames and matrices 14
1.4.1 The attaching of data frames 16
1.4.2 Aggregation, stacking and unstacking 17
1.4.3* Data frames and matrices 17
1.5 Functions, operators and loops 18
1.5.1 Built-in functions 18
1.5.2 Generic functions and the class of an object 20
1.5.3 User-written functions 21
1.5.4 Relational and logical operators and operations 22
1.5.5 Selection and matching 23
1.5.6 Functions for working with missing values 23
1.5.7* Looping 24
1.6 Graphics in R 24
1.6.1 The function `plot( )` and allied functions 25
1.6.2 The use of color 27

John Maindonald and W. John Braun
Table of Contents
More information

1.6.3 The importance of aspect ratio 27
1.6.4 Dimensions and other settings for graphics devices 28
1.6.5 The plotting of expressions and mathematical symbols 28
1.6.6 Identification and location on the figure region 29
1.6.7 Plot methods for objects other than vectors 29
1.6.8 Lattice graphics versus base graphics – `xyplot()` versus `plot()` 30
1.6.9 Further information on graphics 30
1.6.10 Good and bad graphs 30
1.7 Lattice (trellis) graphics 31
1.8 Additional points on the use of R 33
1.9 Recap 36
1.10 Further reading 36
1.10.1 References for further reading 37
1.11 Exercises 37

2 Styles of data analysis **43**
2.1 Revealing views of the data 43
2.1.1 Views of a single sample 44
2.1.2 Patterns in univariate time series 48
2.1.3 Patterns in bivariate data 50
2.1.4 Patterns in grouped data 52
2.1.5* Multiple variables and times 54
2.1.6 Scatterplots, broken down by multiple factors 56
2.1.7 What to look for in plots 58
2.2 Data summary 59
2.2.1 Counts 60
2.2.2 Summaries of information from data frames 63
2.2.3 Standard deviation and inter-quartile range 66
2.2.4 Correlation 68
2.3 Statistical analysis questions, aims and strategies 69
2.3.1 How relevant and how reliable are the data? 70
2.3.2 Helpful and unhelpful questions 70
2.3.3 How will results be used? 71
2.3.4 Formal and informal assessments 72
2.3.5 Statistical analysis strategies 73
2.3.6 Planning the formal analysis 73
2.3.7 Changes to the intended plan of analysis 74
2.4 Recap 74
2.5 Further reading 75
2.5.1 References for further reading 75
2.6 Exercises 75

3 Statistical models **78**
3.1 Regularities 79
3.1.1 Deterministic models 79

Table of Contents
More information

3.1.2 Models that include a random component 79
3.1.3 Fitting models – the model formula 82
3.2 Distributions: models for the random component 83
3.2.1 Discrete distributions 84
3.2.2 Continuous distributions 86
3.3 The uses of random numbers 88
3.3.1 Simulation 88
3.3.2 Sampling from populations 89
3.4 Model assumptions 90
3.4.1 Random sampling assumptions – independence 91
3.4.2 Checks for normality 92
3.4.3 Checking other model assumptions 95
3.4.4 Are non-parametric methods the answer? 95
3.4.5 Why models matter – adding across contingency tables 95
3.5 Recap 96
3.6 Further reading 97
3.6.1 References for further reading 97
3.7 Exercises 97

4 An introduction to formal inference **101**
4.1 Basic concepts of estimation 101
4.1.1 Population parameters and sample statistics 101
4.1.2 Sampling distributions 102
4.1.3 Assessing accuracy – the standard error 102
4.1.4 The standard error for the difference of means 103
4.1.5* The standard error of the median 104
4.1.6 The sampling distribution of the *t*-statistic 104
4.2 Confidence intervals and hypothesis tests 107
4.2.1 One- and two-sample intervals and tests for means 107
4.2.2 Confidence intervals and tests for proportions 113
4.2.3 Confidence intervals for the correlation 113
4.2.4 Confidence intervals versus hypothesis tests 114
4.3 Contingency tables 115
4.3.1 Rare and endangered plant species 117
4.3.2 Additional notes 119
4.4 One-way unstructured comparisons 120
4.4.1 Displaying means for the one-way layout 123
4.4.2 Multiple comparisons 124
4.4.3 Data with a two-way structure, that is, two factors 125
4.4.4 Presentation issues 126
4.5 Response curves 126
4.6 Data with a nested variation structure 127
4.6.1 Degrees of freedom considerations 128
4.6.2 General multi-way analysis of variance designs 129

Table of Contents
More information

4.7 Resampling methods for standard errors, tests and confidence intervals 129
4.7.1 The one-sample permutation test 129
4.7.2 The two-sample permutation test 130
4.7.3* Estimating the standard error of the median: bootstrapping 131
4.7.4 Bootstrap estimates of confidence intervals 133
4.8 Theories of inference* 134
4.8.1 Maximum likelihood estimation 135
4.8.2 Bayesian estimation 136
4.8.3 If there is strong prior information, use it! 136
4.9 Recap 137
4.10 Further reading 138
4.10.1 References for further reading 138
4.11 Exercises 139

5 Regression with a single predictor 144
5.1 Fitting a line to data 144
5.1.1 Lawn roller example 145
5.1.2 Calculating fitted values and residuals 146
5.1.3 Residual plots 147
5.1.4 Iron slag example: is there a pattern in the residuals? 148
5.1.5 The analysis of variance table 150
5.2 Outliers, influence and robust regression 151
5.3 Standard errors and confidence intervals 153
5.3.1 Confidence intervals and tests for the slope 153
5.3.2 SEs and confidence intervals for predicted values 154
5.3.3* Implications for design 155
5.4 Regression versus qualitative anova comparisons 157
5.4.1 Issues of power 157
5.4.2 The pattern of change 158
5.5 Assessing predictive accuracy 158
5.5.1 Training/test sets and cross-validation 158
5.5.2 Cross-validation – an example 159
5.5.3* Bootstrapping 161
5.6 A note on power transformations* 164
5.6.1* General power transformations 164
5.7 Size and shape data 165
5.7.1 Allometric growth 166
5.7.2 There are two regression lines! 167
5.8 The model matrix in regression 168
5.9 Recap 169
5.10 Methodological references 170
5.11 Exercises 170

Table of Contents
More information

6 Multiple linear regression **173**
6.1 *Basic ideas: book weight and brain weight examples* 173
6.1.1 Omission of the intercept term 176
6.1.2 Diagnostic plots 176
6.1.3 Example: brain weight 178
6.1.4 Plots that show the contribution of individual terms 180
6.2 *Multiple regression assumptions and diagnostics* 182
6.2.1 Influential outliers and Cook's distance 183
6.2.2 Influence on the regression coefficients 184
6.2.3* Additional diagnostic plots 185
6.2.4 Robust and resistant methods 185
6.2.5 The uses of model diagnostics 185
6.3 *A strategy for fitting multiple regression models* 186
6.3.1 Preliminaries 186
6.3.2 Model fitting 187
6.3.3 An example – the Scottish hill race data 187
6.4 *Measures for the assessment and comparison of regression models* 193
6.4.1 R^2 and adjusted R^2 193
6.4.2 AIC and related statistics 194
6.4.3 How accurately does the equation predict? 194
6.5 *Interpreting regression coefficients* 196
6.5.1 Book dimensions and book weight 196
6.6 *Problems with many explanatory variables* 199
6.6.1 Variable selection issues 200
6.7 *Multicollinearity* 202
6.7.1 A contrived example 202
6.7.2 The variance inflation factor 206
6.7.3 Remedies for multicollinearity 206
6.8 *Multiple regression models – additional points* 207
6.8.1 Errors in x 207
6.8.2 Confusion between explanatory and response variables 210
6.8.3 Missing explanatory variables 210
6.8.4* The use of transformations 212
6.8.5* Non-linear methods – an alternative to transformation? 212
6.9 *Recap* 214
6.10 *Further reading* 214
6.10.1 References for further reading 215
6.11 *Exercises* 216

7 Exploiting the linear model framework **219**
7.1 *Levels of a factor – using indicator variables* 220
7.1.1 Example – sugar weight 220
7.1.2 Different choices for the model matrix when there are factors 223

Table of Contents
More information

7.2 Block designs and balanced incomplete block designs 224
7.2.1 Analysis of the rice data, allowing for block effects 224
7.2.2 A balanced incomplete block design 226
7.3 Fitting multiple lines 227
7.4 Polynomial regression 231
7.4.1 Issues in the choice of model 233
7.5 Methods for passing smooth curves through data* 234
7.5.1 Scatterplot smoothing – regression splines 235
7.5.2* Penalized splines and generalized additive models 239
7.5.3 Other smoothing methods 239
7.6 Smoothing terms in additive models 241
7.6.1* The fitting of penalized spline terms 243
7.7 Further reading 243
7.7.1 References for further reading 243
7.8 Exercises 243

8 Generalized linear models and survival analysis 246
8.1 Generalized linear models 246
8.1.1 Transformation of the expected value on the left 246
8.1.2 Noise terms need not be normal 247
8.1.3 Log odds in contingency tables 247
8.1.4 Logistic regression with a continuous explanatory variable 248
8.2 Logistic multiple regression 251
8.2.1 Selection of model terms and fitting the model 253
8.2.2 A plot of contributions of explanatory variables 256
8.2.3 Cross-validation estimates of predictive accuracy 257
8.3 Logistic models for categorical data – an example 258
8.4 Poisson and quasi-Poisson regression 260
8.4.1 Data on aberrant crypt foci 260
8.4.2 Moth habitat example 263
8.5 Additional notes on generalized linear models 269
8.5.1* Residuals, and estimating the dispersion 269
8.5.2 Standard errors and *z*- or *t*-statistics for binomial models 270
8.5.3 Leverage for binomial models 270
8.6 Models with an ordered categorical or categorical response 271
8.6.1 Ordinal regression models 271
8.6.2* Loglinear models 274
8.7 Survival analysis 275
8.7.1 Analysis of the `Aids2` data 276
8.7.2 Right censoring prior to the termination of the study 278
8.7.3 The survival curve for male homosexuals 279
8.7.4 Hazard rates 279
8.7.5 The Cox proportional hazards model 280
8.8 Transformations for count data 282
8.9 Further reading 283

8.9.1 References for further reading 283
8.10 Exercises 284

9 Time series models 286
9.1 Time series – some basic ideas 286
9.1.1 Preliminary graphical explorations 286
9.1.2 The autocorrelation function 287
9.1.3 Autoregressive models 288
9.1.4* Autoregressive moving average models – theory 290
9.2 Regression modeling with moving average errors* 291
9.3 Non-linear time series* 297
9.4 Other time series packages 298
9.5 Further reading 298
9.5.1 Spatial statistics 299
9.5.2 References for further reading 299
9.6 Exercises 299

10 Multi-level models and repeated measures 301
10.1 A one-way random effects model 302
10.1.1 Analysis with `aov()` 303
10.1.2 A more formal approach 306
10.1.3 Analysis using `lmer()` 308
10.2 Survey data, with clustering 311
10.2.1 Alternative models 311
10.2.2 Instructive, though faulty, analyses 316
10.2.3 Predictive accuracy 317
10.3 A multi-level experimental design 317
10.3.1 The anova table 319
10.3.2 Expected values of mean squares 320
10.3.3* The sums of squares breakdown 321
10.3.4 The variance components 324
10.3.5 The mixed model analysis 325
10.3.6 Predictive accuracy 327
10.3.7 Different sources of variance – complication or focus of interest? 327
10.4 Within- and between-subject effects 328
10.4.1 Model selection 329
10.4.2 Estimates of model parameters 330
10.5 Repeated measures in time 332
10.5.1 Example – random variation between profiles 334
10.5.2 Orthodontic measurements on children 339
10.6 Error structure considerations 343
10.6.1 Predictions from models with a complex error structure 343
10.6.2 Error structure in explanatory variables 344

10.7 Further notes on multi-level and other models with correlated errors 344
10.7.1 An historical perspective on multi-level models 344
10.7.2 Meta-analysis 346
10.7.3 Functional data analysis 346
10.8 Recap 346
10.9 Further reading 347
10.9.1 References for further reading 347
10.10 Exercises 348

11 Tree-based classification and regression **350**
11.1 The uses of tree-based methods 351
11.1.1 Problems for which tree-based regression may be used 351
11.2 Detecting email spam – an example 352
11.2.1 Choosing the number of splits 355
11.3 Terminology and methodology 355
11.3.1 Choosing the split – regression trees 355
11.3.2 Within and between sums of squares 356
11.3.3 Choosing the split – classification trees 357
11.3.4 Tree-based regression versus loess regression smoothing 358
11.4 Predictive accuracy and the cost–complexity tradeoff 360
11.4.1 Cross-validation 361
11.4.2 The cost–complexity parameter 361
11.4.3 Prediction error versus tree size 362
11.5 Data for female heart attack patients 363
11.5.1 The one-standard-deviation rule 365
11.5.2 Printed information on each split 365
11.6 Detecting email spam – the optimal tree 366
11.7 The randomForest package 368
11.8 Additional notes on tree-based methods 371
11.8.1 The combining of tree-based methods with other approaches 371
11.8.2 Models with a complex error structure 372
11.8.3 Pruning as variable selection 372
11.8.4 Other types of tree 372
11.8.5 Factors as predictors 372
11.8.6 Summary of pluses and minuses of tree-based methods 372
11.9 Further reading 373
11.9.1 References for further reading 373
11.10 Exercises 374

12 Multivariate data exploration and discrimination **375**
12.1 Multivariate exploratory data analysis 376
12.1.1 Scatterplot matrices 376
12.1.2 Principal components analysis 377
12.1.3 Multi-dimensional scaling 383

12.2 Discriminant analysis 384
12.2.1 Example – plant architecture 384
12.2.2 Logistic discriminant analysis 386
12.2.3 Linear discriminant analysis 387
12.2.4 An example with more than two groups 388
12.3 High-dimensional data, classification and plots* 390
12.3.1 Classifications and associated graphs 392
12.3.2 Flawed graphs 393
12.3.3 Accuracies and scores for test data 397
12.3.4 Graphs derived from the cross-validation process 403
12.4 Further reading 405
12.4.1 References for further reading 406
12.5 Exercises 406

13 Regression on principal component or discriminant scores **408**
13.1 Principal component scores in regression 408
13.2 Propensity scores in regression comparisons – labor training data* 412
13.2.1 Regression analysis, using all covariates 415
13.2.2 The use of propensity scores 417
13.3 Further reading 419
13.3.1 References for further reading 419
13.4 Exercises 420

14 The R system – additional topics **421**
14.1 Working directories, workspaces and the search list 421
14.1.1* The search path 421
14.1.2 Workspace management 421
14.1.3 Utility functions 423
14.2 Data input and output 423
14.2.1 Input of data 424
14.2.2 Data output 428
14.3 Functions and operators – some further details 429
14.3.1 Function arguments 430
14.3.2 Character string and vector functions 431
14.3.3 Anonymous functions 431
14.3.4 Functions for working with dates (and times) 432
14.3.5 Creating groups 433
14.3.6 Logical operators 434
14.4 Factors 434
14.5 Missing values 437
14.6 Matrices and arrays* 439
14.6.1 Matrix arithmetic 440
14.6.2 Outer products 441
14.6.3 Arrays 442
