<i>Preface</i>	<i>page ix</i>
1 Numbers	1
1.1 Real numbers	2
1.2 Inequalities	9
1.3 Proving inequalities	14
1.4 Least upper bounds and greatest lower bounds	22
1.5 Manipulating real numbers	30
1.6 Exercises	35
2 Sequences	37
2.1 Introducing sequences	38
2.2 Null sequences	43
2.3 Convergent sequences	52
2.4 Divergent sequences	61
2.5 The Monotone Convergence Theorem	68
2.6 Exercises	79
3 Series	83
3.1 Introducing series	84
3.2 Series with non-negative terms	92
3.3 Series with positive and negative terms	103
3.4 The exponential function $x \mapsto e^x$	122
3.5 Exercises	127
4 Continuity	130
4.1 Continuous functions	131
4.2 Properties of continuous functions	143
4.3 Inverse functions	151
4.4 Defining exponential functions	161
4.5 Exercises	164
5 Limits and continuity	167
5.1 Limits of functions	168
5.2 Asymptotic behaviour of functions	176
5.3 Limits of functions – using ε and δ	181
5.4 Continuity – using ε and δ	193
5.5 Uniform continuity	200
5.6 Exercises	203

6	Differentiation	205
6.1	Differentiable functions	206
6.2	Rules for differentiation	216
6.3	Rolle's Theorem	228
6.4	The Mean Value Theorem	232
6.5	L'Hôpital's Rule	238
6.6	The Blancmange function	244
6.7	Exercises	252
7	Integration	255
7.1	The Riemann integral	256
7.2	Properties of integrals	272
7.3	Fundamental Theorem of Calculus	282
7.4	Inequalities for integrals and their applications	288
7.5	Stirling's Formula for $n!$	303
7.6	Exercises	309
8	Power series	313
8.1	Taylor polynomials	314
8.2	Taylor's Theorem	320
8.3	Convergence of power series	329
8.4	Manipulating power series	338
8.5	Numerical estimates for π	346
8.6	Exercises	350
Appendix 1	Sets, functions and proofs	354
Appendix 2	Standard derivatives and primitives	359
Appendix 3	The first 1000 decimal places of $\sqrt{2}$, e and π	361
Appendix 4	Solutions to the problems	363
	Chapter 1	363
	Chapter 2	371
	Chapter 3	382
	Chapter 4	393
	Chapter 5	402
	Chapter 6	413
	Chapter 7	426
	Chapter 8	443
	<i>Index</i>	457
