
Contents

<i>Introduction</i>	<i>page</i> ix
Part I: <i>Logic programming paradigm</i>	1
1 <i>Logic programming and pure Prolog</i>	3
1.1 Introduction	3
1.2 Syntax	4
1.3 The meaning of a program	7
1.4 Computing with equations	9
1.5 Prolog: the first steps	15
1.6 Two simple pure Prolog programs	23
1.7 Summary	26
1.8 Exercises	26
2 <i>A reconstruction of pure Prolog</i>	29
2.1 Introduction	29
2.2 The programming language \mathcal{L}_0	29
2.3 Translating pure Prolog into \mathcal{L}_0	33
2.4 Pure Prolog and declarative programming	35
2.5 \mathcal{L}_0 and declarative programming	36
2.6 Summary	37
2.7 Exercises	38
Part II: <i>Elements of Prolog</i>	39
3 <i>Arithmetic in Prolog</i>	41
3.1 Introduction	41
3.2 Arithmetic expressions and their evaluation	42
3.3 Arithmetic comparison predicates	47
3.4 Passive versus active constraints	51

vi	<i>Contents</i>	
	3.5 Operators	52
	3.6 Summary	55
	3.7 Exercises	57
4	<i>Control and meta-programming</i>	59
	4.1 More on Prolog syntax	59
	4.2 Control	62
	4.3 Meta-programming	69
	4.4 Summary	74
	4.5 Exercises	75
5	<i>Manipulating structures</i>	76
	5.1 Structure inspection facilities	76
	5.2 Structure comparison facilities	78
	5.3 Structure decomposition and construction facilities	80
	5.4 Summary	85
	5.5 Exercises	85
	Part III: <i>Programming with passive constraints</i>	87
6	<i>Constraint programming: a primer</i>	89
	6.1 Introduction	89
	6.2 Basic concepts	90
	6.3 Example classes of constraints	91
	6.4 Constraint satisfaction problems: examples	94
	6.5 Constrained optimisation problems: examples	98
	6.6 Solving CSPs and COPs	102
	6.7 From CSPs and COPs to constraint programming	107
	6.8 Summary	108
	6.9 Exercises	108
7	<i>Intermezzo: Iteration in ECLⁱPS^e</i>	110
	7.1 Introduction	110
	7.2 Iterating over lists and integer ranges	111
	7.3 Iteration specifications in general	113
	7.4 Arrays and iterations	121
	7.5 <code>fromto/4</code> : the most general iterator	124
	7.6 The n -queens problem	129
	7.7 Summary	130
	7.8 Exercises	132
8	<i>Top-down search with passive constraints</i>	133
	8.1 Introduction	133
	8.2 Solving CSPs using Prolog	134

<i>Contents</i>		vii
8.3	Backtracking search in Prolog	135
8.4	Incomplete search	139
8.5	Non-logical variables	146
8.6	Counting the number of backtracks	149
8.7	Summary	153
8.8	Exercises	153
9	<i>The suspend library</i>	155
9.1	Introduction	155
9.2	Solving CSPs and COPs using ECL ⁱ PS ^e	156
9.3	Introducing the <code>suspend</code> library	157
9.4	Core constraints	160
9.5	User defined suspensions	167
9.6	Generating CSPs	170
9.7	Using the <code>suspend</code> library	175
9.8	Summary	180
9.9	Exercises	181
	Part IV: <i>Programming with active constraints</i>	183
10	<i>Constraint propagation in ECLⁱPS^e</i>	185
10.1	Introduction	185
10.2	The <code>sd</code> library	186
10.3	The <code>ic</code> library	189
10.4	Disjunctive constraints and reification	200
10.5	Summary	203
10.6	Exercises	204
11	<i>Top-down search with active constraints</i>	205
11.1	Introduction	205
11.2	Backtrack-free search	206
11.3	Shallow backtracking search	208
11.4	Backtracking search	211
11.5	Variable ordering heuristics	215
11.6	Value ordering heuristics	218
11.7	Constructing specific search behaviour	220
11.8	The <code>search/6</code> generic search predicate	223
11.9	Summary	227
11.10	Exercises	229
12	<i>Optimisation with active constraints</i>	230
12.1	The <code>minimize/2</code> built-in	230
12.2	The knapsack problem	232
