## Contents

Foreword by Benjamin A. Foote ........................... ix
Foreword by Rudolf Rozkošný ............................ x
Preface .................................................. xiii
Avant propos ........................................... xv
About the authors ....................................... xvi
Acknowledgments ........................................ xviii

1 Introduction ........................................... 1
   1.1 Definitions of saprophage, parasite, parasitoid, and predator, with examples in the Sciomyzidae, and of apo/plesiomorphic and apo/plesiotypic ................................. 2
   1.2 Hosts/prey of Sciomyzidae .......................... 13

2 Natural enemies of Mollusca ....................... 21
   2.1 General reviews of literature ...................... 21
   2.2 Malacophagous insects other than Diptera ......... 22

3 Malacophagy in Diptera ............................ 26

4 Life cycles .......................................... 31
   4.1 Overview of life cycles ............................ 31
   4.2 Generalization, specialization, and lability in behavioral attributes ................................. 32
   4.3 Classification of behavioral groups ............... 36
   4.4 Behavioral equivalents in zoogeographic regions ........................................... 41
   4.5 Summary of unpublished and recently published life-cycle information ......................... 41
   4.6 Life cycle of Pelidnophaga nigripennis (Phaecomyiidae) ...................................... 44

5 Host/prey ranges and preferences .................. 47
   5.1 Host/prey ranges ................................... 47
   5.2 Experimental studies of food preferences ......... 54

6 Host/prey finding .................................... 67
   6.1 Adults ............................................. 67
   6.2 Larvae ............................................ 69

7 Feeding behavior ..................................... 72
   7.1 Feeding sites ...................................... 72

7.2 Numbers and sizes of hosts/prey attacked (except by aquatic predators) ......................... 76

7.3 Experimental studies – aquatic predators ......... 82

8 Competition .......................................... 97
   8.1 Interspecific competition .......................... 97
   8.2 Intraspecific competition .......................... 99

9 Phenology, reproduction, and development ....... 103
   9.1 Phenology ......................................... 105
   9.2 Reproduction ...................................... 126
   9.3 Durations of life-cycle aspects and stages and rates of development of immature stages ........................................... 136

10 Macrohabitats and microhabitats, guild structures and associations, threatened species, and bio-indicators ........................................... 161
   10.1 Macrohabitats and microhabitats ................. 161
   10.2 Guilds and associations ........................... 172
   10.3 Threatened species and bio-indicators .......... 175

11 Natural enemies ..................................... 178
   11.1 Pathogens ........................................ 178
   11.2 Parasitoids ....................................... 179
   11.3 Predators ........................................ 181

12 Defense mechanisms ................................ 183
   12.1 Mollusc defense mechanisms against Sciomyzidae ........................................... 183
   12.2 Sciomyzid defense mechanisms against hosts/prey and natural enemies ................. 186

13 Population dynamics ................................ 189
   13.1 Aquatic species ................................... 189
   13.2 Terrestrial species ................................ 197

14 Morphological, physiological/behavioral, and genetics and related aspects ................. 199
   14.1 Morphological aspects ............................ 199
   14.2 Physiological/behavioral aspects ............... 258
   14.3 Genetics and related aspects .................... 267
15 Systematics and related topics 271
15.1 Identification 271
15.2 Keys to adults and larvae of genera of Sciomyzidae of the world by regions and keys to puparia in the Nearctic and Palearctic regions 294
15.3 Alpha-level taxonomy 324
15.4 Relationships among and within genera 324
15.5 Regional studies 331
15.6 Fossils 338
15.7 Suprafamilial and suprageneric classifications and phylogeny 338
16 Zoogeography 351
16.1 Distribution 351
16.2 Faunal relationships and dispersal routes 361
16.3 Dispersal mechanisms 368
17 Evolutionary considerations 373
17.1 Sciomyzidae – a paradigm for evolution of saprophagous–predatory–parasitoid behavior and morphological adaptations to habitats? 373
17.2 Evolution of malacophagy in the Diptera 375
17.3 Behavior of families related to Sciomyzidae 375
17.4 Diversity of Sciomyzidae 376
17.5 Origin of Sciomyzidae 379
17.6 Primitive Sciomyzidae 380
17.7 Ecological specialization and generalization 381
17.8 Cladistic–phylogenetic basis for evolutionary considerations 382
17.9 Subsequent adaptive radiation 386
17.10 Speciation 392
17.11 Concluding comments 394
18 Biological control 397
18.1 Aquatic snails 398
18.2 Terrestrial snails 410
18.3 Slugs 414
18.4 Potential risks of introductions 416
19 History of research on Sciomyzidae 418
19.1 Systematics 418
19.2 Evolutionary studies 423
19.3 Biology 423
19.4 Morphology of immature stages 424
19.5 Experimental, quantitative, and biocontrol research 425
19.6 Biographical notes 426
20 Methods 431
20.1 Collecting 431
20.2 Rearing and record keeping 434
20.3 Preserving and studying adults and immature stages 437
20.4 Population studies 439
20.5 Notes on major collections 440
21 World checklist of Sciomyzidae and Phaeomyiidae 442

References 461
Equations 497
Index 1: Subject 498
Index 2: Genera and species cited other than Sciomyzidae, Phaeomyiidae, and Mollusca 501
Index 3: Group names cited other than Sciomyzidae, Phaeomyiidae, and Mollusca 503
Index 4: Suprageneric names in Sciomyzidae and Phaeomyiidae 505
Information about the DVD 506

The plates will be found between pages 76 and 77
