Coding interactive behavior (CIB) system

Coddington, R.D., 403, 404

Conclusion, 560–561

dyadic psychotherapy and psychosocial interventions, 561

evaluating change following intervention, 547–548

family patterns, findings regarding, 533–554

formulating language for, 539

generally, 535–539, 561–562

genetic disorders, risk of, 557

high contextual risk conditions, 546

higher-order constructs, 540

infant social-emotional risk, 559–560

infants, findings regarding, 550–551

intrauterine growth retardation, risk of, 550–551

just-verbal toddlers, 542

level of observation, 539

maternal affective disorder, risk of, 557–559

maternal psychological risk conditions, 546

multiple births, risk of, 556–557

newborns, findings regarding, 550

normative processes, findings regarding, 550–554

pathological versus normative interactions, 545–547

perspective-taking adolescents, 544

predictive validity, 549

prematurity, risk of, 554–556

prenatal neurological risk, 557

preschoolers, findings regarding, 552

psychometric properties of, 548–549

PTSD and, 547, 560

relational infants, 542

relational patterns, findings regarding, 554–560

relation to other coding schemes, 540

social-emotional risk, findings regarding, 557–560

social-emotional risk conditions, 546

socially-oriented newborn and maternal postpartum repertoire, 541

stages in, 541–545

structure of observation, 540

symbolic preschoolers, 543

target of observation, 539–540

test-retest reliability, 548

toddlers, findings regarding, 551–552

touch interventions for premature infants, 560–561

verbal-empathetic children, 543–544

Coffman, S., 370

Cognition, role in social networks, 373–374
