Index

5-HTTLPR gene
- effect on brain morphology 105
- and increased risk for depression 83
- link to stressful life events 105–106, 121–122

adjustment disorder 45–46
adrenal androgens 57, 60, 84
adrenarche 57, 76
affect 299
- affective development 2–5, 263
- see also emotion socialization
- and pubertal status 60–62
- see also negative affect/emotions, positive affect/emotions
affect regulation 119
- and adolescent depression 117–118
- deficits in EF underlying 149, 150
- impact on brain development 126–128
- and development of executive function 135–136
- decision-making and OFC 142–144
- inhibitory control 149
- performance monitoring by medial PFC 144–145
- role of hot and cool EF 139–140
- role of lateral PFC 148
- rule use and lateral PFC 146–148
- link to dispositional sympathy 179–180
- negative emotionality, link to shame and guilt 185
neurobiology of 119
- affect dysregulation 124–126
- affect reactivity and regulation 119
- associated brain development 124
- parental influences 265–266
- physiological indices 266

age differences
- in emotional experiences 15, 20
- adolescents versus adults 15–17
- adolescents versus pre-adolescents 17–19
- middle adolescence 19–20
- in MDD symptom presentation 40–42
- in prevalence of depression 35
- self-report depression questionnaires 38

amygdala
- and depression
- age-related volume differences 124
- sustained response and rumination 165
- link to fear 121, 125, 162–163
- memory encoding, greater activation during 167
- and reward processing 119–120, 125

animal models and studies
- diathesis-stress 83
- enriched environment and brain plasticity 107–108, 128
- symptom-based approach 168
- anterior cingulate cortex (ACC) and performance monitoring 144–145

anxiety disorders
- comorbidity with mood disorders 158–159, 238
- enhanced striatal activation in 166
- link to parental psychological control 187–188
- symptoms of 158
- approach-avoidance decisions, role of OFC 142–144
- assortative mating, influencing risk for depression 329–330

attachment
- insecure due to inhibition in child 225, 227
- maternal style and self-criticism 207–208
- and romantic relationships 329
attachment (cont.)
secure, and family cohesion 269
social comparison and shame 204–205
attention
behavioral studies of 160–161
externally versus internally focused
emotions 198–199
neuroimaging studies of 162–163
Australian Temperament Project (ATP) 217
behavioral disinhibition 246, 248
behavioral inhibition (BI) 166, 223, 241,
245–246, 247–248
bipolar disorder
amygdala hyperactivation in 163
and behavioral disinhibition 248
comorbidity rates 39
continuity from adolescence to early
adulthood 47
development of during puberty 87
and disturbances in executive function 164
and family functioning 285
and MDD, similarities and differences 159
memory perturbations in 166
in parents 286, 287
peer relationships 325
pharmacological treatment of 128
prevalence 35, 280
reduced striatal activation 166
blood oxygenation-level dependent (BOLD)
signal
age-related differences in 99
in the amygdala during facial processing 100
measurement of using fMRI 93
body-image changes during puberty 66
boys
physical changes of puberty 58–59
pubertal timing and negative affect 63
responses to empathy-inducing
stimuli 181
see also gender differences
brain development 6
affect reactivity and regulation 122–124
and depression in adolescence 116–117
effects of depression on 126
adolescence as period for intervention
127–128
brain structure and function 126–127
future research recommendations
128–129
impact on vulnerability to depression 126
brain function
and adult depression 124–126
age-performance interactions 97–99
changes during adolescence 123–124
cognition-emotion interactions 99–100
influence of depression on 126–127
brain maturation 92–93
effects of genes and experience on brain
structure 104–108
gender differences in 100–104
later maturation of circuits responsible
for affect regulation 123–124
role of gonadal steroid receptors on affective
processes 2–3
structural changes during childhood
96–97
functional interpretation of 97
brain structure
and adult depression 124–126
age-related changes in 96–97, 137
animal studies, activity-induced brain
plasticity 107–108
changes during adolescence 122–123
effect of variation in 5-HTTLPR gene
105–106
experiences influencing 106–108
gender differences 104
during childhood and adolescence
102–104
in first five years 102
in hemispheric asymmetries
101–102, 104
influence of depression on 126–127
MRI analysis of 93
bullying
and group ecology 207
link to depression 322–323
link to peer-rejection 302
and shaming behavior 206–207
cerebellum, late maturation of 123
chumships 305
cliques, peer groups 303–304
close friendships 305–306, 324
and depression contagion 325, 330
effect of conflict/negative interactions 325
impaired in depressed adolescents 325
protecting from depression 324
reinforcing depressive feelings 324
co-rumination 305–306, 324
cognitive behavioral therapy (CBT) 168
cognitive development 6
cognitive function and depression
attention, behavioral studies of 160–161
depressotypic cognitions 249

psychosocial functioning
during adolescence before during and after MDD 42–45
effect of stressful transitions and challenges 252–253
doing of young adults following episode of MDD 47–49
temperament predicting 232
Pubertal Development Scale (PDS) 59
pubertal status 60
and gene–environment interactions 82–83
hormone concentrations and affect 60–61
secondary sex characteristics and affect 61–62
pubertal timing and affect
African–American children 80–81
early maturation and depression 62–63
ethnic group differences 63–64
mechanisms linking 64–66
differences in measurement methods 62, 80
hypotheses 62
and internalizing problems/disorders 62–63, 78–80
‘off-time’ maturation 64, 79
puberty 2–3
and bipolar disorders 87
correlation to emotionality 21
and depression
diathesis stress models 83–84
implications for prevention 87–88
link with other adolescent challenges 84–85
puberty as necessary condition for 81–83
quality of family relations 85–86
development
and affective processes 56–57
biological aspects 57–59
future research 67–68
measurement of 59–60
physical changes 58–59
physiological changes 57–58
pubertal processes and affect 60–62
risk for depression 74–75
see also pubertal status, pubertal timing
recurrence of MDD 37, 45–46, 49
rejection
fear of rejection and preoccupied style 327
parental 205, 230, 254
peer 302
and depression, bi-directional association 319–321
romantic relationships 329
see also victimization
relational aggression, link to perceived popularity 302–303
relationships during adolescence 3–4
family and social, changes in 4
and need for social acceptance 196–197
see also friendships, peer relationships, romantic relationships
research directions/limitations 342–345
brain development 128–129
cultural differences temperament and mood disorder 255
cultural variables and family processes 345
epidemiology 50–51
family processes 271–273
measurement of affective processes 67
peer and romantic relationships 330–331
puberty–disorder links 88
representativeness of samples 68
resilience
role of temperament 227, 270
and time spent alone 27–28
respiratory sinus arrhythmia (RSA) and emotion regulation 266
reward processing 119–120, 123
approach-avoidance tasks
delay-discounting paradigm 143
delay of gratification tasks 142–143
investigation of neural basis of 121
later brain maturation 123–124, 341
less activation of brain areas in depressed children 125–126
reward seeking behavior 3, 116
and positive affect 118
risk factor for depression 4
suppression of leading to depression 341
romantic relationships 306–307
and depression 318, 326–327
due to loss of social interaction with peers 327
gender differences 330
moderating factors 327
and negative events/interactions 328, 330
rejection, fear of 329
role of peer relationships 329–330
self-regulation processes 328–329
effects of unreciprocated love 308
links to affective experiences and affect regulation 310–311
and psychosocial adjustment 308–309
research suggestions 330–331
and social status 309
supportive aspect of 307
rule use 146–147
development of switching 147
and emotional regulation 148
hierarchical development of more complex rules 140–142
impact of EF deficits 148–149
role of lateral PFC in 140, 146–148
and working memory 147
rumination 26, 163–164, 165, 202, 249
secondary sex characteristics
boys 58–59
effect on depression 61–62, 78
girls 58
measurement of 59–60
self-compassion 208
self-criticism
and compassion 208–209
and early background 207–208
internal shaming process 202
relationship to shame 195–197, 203–204
self-esteem
and bullying 323
and close friendships 324, 325
and evaluation by others 197
link to maternal acceptance/emotional expression 270
and peer crowd affiliation 321–322
and peer rejection 320
self-evaluation
derived from evaluation by others 197–198
peer group as source of 203
shame and negative self-evaluation 198, 199, 200, 210
self-identities and group ecology 207
self-regulation
development of 4, 219–220, 339
dimension of temperament 216
and externalizing problems 232, 254
links with shame and guilt 186
neural basis of see executive function (EF) and prosocial behavior 224–225
and romantic relationships 328–329
see also affect regulation
self-soothing abilities, importance of 209
serotonin system, link to negative affect 121
sex differences see gender differences
sexual abuse and depression 85–86, 205
sexual development see puberty
sexual minorities
problems faced by 309
romantic experiences 307
sexuality, link to shame in girls 206
shame 198
correlates of 184–185
development consequences of 205–207
external versus internal 198–199
and failure to reach self-standards 199–200
link with anxiety and depression 185–186
origins of 182–183, 199, 204–205
relationship to self-criticism 195–197
responses in social interactions 198
and self-criticism in adolescence 203–204
and self-regulation 186
see also guilt
siblings, role in affective development 267
social acceptance 196–197, 207, 321, 341
social competence
and romantic experiences 308
and sympathy 179
and temperament 224–225, 229, 232, 248–249
social competition see competitiveness, social
social emotions see guilt, shame
social skills see social competence
social status
measurement of 301–303
of romantic partner 309
peer groups 303–305, 321–322
in small groups and social acceptance 207
socialization see familial processes, parenting, emotion socialization
stage-termination hypothesis, pubertal timing 62, 63
stress
diathesis-stress models 65, 83–84
in early life, reversed by environmental enrichment 128
gene–environment interactions 83, 105–106
and maturation of the HPG system 82
pathway from negative affect to depression 26–27
physiological reactivity
effect on brain structure 127
neuroendocrine responses 250
relationship of negative life events to negative affect 21–23
and secretion of cortisol 76–77
stressors during adolescence 65–66, 252–253
transitional stress model 65
structural MRI 93
and brain maturation 96–97
substance use
link to early menarche 79, 87
and temperament 225–226
subthreshold depression 44–45
sympathy 175–176
and affective perspective taking 178–179
correlate of 179–180
and emotional regulation 179, 180
gender differences in 177–178
parental practices promoting 180–181
and social behavior 179
symptom-based approach 158
advantages of 168–169
symptomatic expression of MDD 40
age differences in 40–42
gender differences in 42
temperament 6–7
assessment of 242–243
conceptualizations 241
directions for further research 231–232
and early adolescent development 215
gender differences in rate of depressive
disorders 250–252
measurement scales of 217–218
and personality 220–221
and risk for mood disorders 238, 243
in adults 243–244
mediating factors 248
depressotypic cognitions 249
interpersonal problems 248–249
maladaptive coping 249–250
neuroendocrine stress reactivity 250
moderators of relationship 252
adolescent challenges/life stressors
252–253
interactions between temperament
dimensions 253–254
neurobiological/neurocognitive
changes 253
parenting 254
research directions 254–255
in youths 244
conclusion from studies 247–248
high-risk studies 244–246
prospective studies of non-depressed
children and adolescents 246–247
and socio-emotional functioning 222–223
culture moderating 228–229
direct effects 223–225
gender moderating 229
indirect effects 225–226
interactional effects 226–228
measurement issues 221–222
multiple pathways 230–231
stability and change from childhood to
adolescence 218–220
theoretical models
in adolescence 216–218
infancy and childhood 216
time spent alone, effect on mood 27–28, 301
transitional stress model 65
treatments
cognitive behavior therapy (CBT) 168
OADP adolescents with MDD 42
pharmacological 128
see also interventions
tripartite model of anxiety and depression 224
unipolar depression
brain function 125
comorbidity 38–39
gender differences 56
prevalence and incidence rates 1, 35
see also dysthymia, major depressive
disorder (MDD)
verbal abuse in childhood
link to depression and anxiety 205
and shame proneness 205
victimization 302
and depression 322–323
and affective functioning during early
adolescence 2–5
and development of new cognitive
skills 24, 341
diathesis-stress models 65, 83–84
factors predicting recurrence 49–50
impact of brain development 126
development of PFC and pursuit of distal
rewards 341–342
mismatch in maturation of limbic areas
and PFC 338–340
and maturation of self-regulation capacity
338, 341
peer bullying 206–207
relative roles of negative and positive affects
224, 251, 344–345
vulnerability to depression (cont.)
  and self-criticism 203
  unhealthy family relationships 86, 205, 281, 289–290

white matter (WM) volume
  age-related changes in 96, 123, 137
  functional interpretation of changes 97, 100
  gender differences 101, 102–103
working memory
  age-related improvement of 99, 147–148
  and complex rule hierarchies 150

link to DL-PFC function 147
required for self-regulation 148

young adulthood
Australian Temperament Project (ATP) 217
continuity of depressive disorders into 45–47
follow-up of OADP participants 79–80
predictors of MDD recurrence in 49–50
prevalence of DSM-IV disorders 46
psychosocial functioning 47–49
Youth and Adolescence Study (YAS) 14–25
