

## Contents

<i>Preface</i>	page ix	<b>4 Global structure and tectonics</b>	<b>77</b>
<i>Maps</i>	xi	Formation of the core	77
<b>1 Overview</b>	<b>1</b>	Global dichotomy	78
Telescopic observations	1	Thickness of the lithosphere	84
Orbital and rotational motions	2	Formation of Tharsis	84
Global structure and topography	5	Surface indicators of stress	86
Atmosphere	5	Extensional structures	86
Surface temperatures	9	Compressional structures	89
Stability of water	11	Deformational features related to Tharsis	90
Global geology	14	<b>5 Canyons</b>	<b>95</b>
Meteorites	19	Physiography	96
Carbonaceous chondrites and chemical fractionation	19	Canyon walls	102
Martian meteorites	20	Landslides	103
<b>2 Impact craters</b>	<b>23</b>	Interior layered deposits	105
Crater-forming objects	23	Formation of the canyons	110
Crater morphology	24	Summary	111
Simple craters	24	<b>6 Channels, valleys, and gullies</b>	<b>113</b>
Complex craters	25	Outflow channels	113
Multi-ringed basins	26	Circum-Chryse channels	114
Crater formation	27	Description	114
Ejecta morphology	31	Mode of formation	116
Crater modification	34	Tharsis	121
Crater size frequencies and ages	36	Amazonis and Elysium Planitiae	122
Summary	41	Description	122
<b>3 Volcanism</b>	<b>43</b>	Mode of formation	126
Basaltic volcanism	43	Utopia Planitia	127
Effect of Martian conditions	44	Hellas	129
Tharsis	46	Argyre	130
Tharsis Montes	46	The poles	130
Olympus Mons	51	Valley networks	131
Alba Patera	54	General description	132
Small Tharsis shields	57	Drainage basins	137
Elysium	59	Origin	139
Lahars and dikes	60	Noachian valleys	140
Cerberus–Amazonis	64	Post-Noachian valleys	144
Hellas–Hesperia	68	Gullies	144
Plains volcanism	70	Summary	147
Volcano–ice interactions	73	<b>7 Lakes and oceans</b>	<b>149</b>
Summary	74	Paleolakes in the cratered uplands	149
		Argyre and Hellas	156

Northern oceans	160	<b>11 The view from the surface</b>	<b>229</b>
Shorelines	164	Vikings 1 and 2	229
Evidence for marine sediments	167	Mars Pathfinder	231
Evidence for ice	168	Mars Exploration Rovers	231
Possible fate of a northern ocean	168	Spirit	232
Summary	171	Gusev crater regional context	232
<b>8 Ice</b>	<b>173</b>	Gusev plains	235
The stability of ice	174	Columbia Hills	238
Spectral evidence for ice	175	Clovis class	239
Permafrost	175	Wishstone class	240
Ice-rich surficial deposits at high latitudes	177	Peace class	241
Fretted terrain	178	Watchtower class	241
Terrain softening	179	Backstay class	242
Lobate debris aprons	180	Opportunity	244
Lineated valley fill	184	Regional context	244
Origin of the fretted valleys	185	The Meridiani rocks and soils	246
Glaciers	187	The Burns Formation	246
Other possible indicators of ground ice	188	Post-depositional alteration	252
Crater ejecta patterns	188	Groundwater movement	253
Polygonal fractures	189	Evaporitic sources	254
Thermokarst	191	Summary	254
Summary	191	<b>12 Climate change</b>	<b>257</b>
<b>9 Wind</b>	<b>193</b>	Noachian climate	257
Entrainment of particles by the wind	193	Greenhouse warming	258
Dust storms	195	Retention of a dense CO <sub>2</sub> atmosphere	260
Wind streaks and tails	197	Post-Noachian climate history	262
Dunes, ripples, and drifts	198	Recent climate changes	265
Regional eolian deposits	203	Summary	265
Wind erosion	204	<b>13 Implications for life</b>	<b>267</b>
Summary	205	The origin of life	268
<b>10 Poles</b>	<b>211</b>	Habitability	271
The present polar environments	211	Survival	272
General description of polar terrains	212	ALH84001	273
Northern polar deposits	212	Looking for life	274
Upper unit	212	Summary	274
Basal unit	218	<b>14 Summary</b>	<b>277</b>
Southern polar deposits	221	Reference	283
The Dorsa Argentea Formation	222	Index	297
The CO <sub>2</sub> residual cap	225		
Summary	226
