Index

adversarial errors, 130
arc, 9

batch coding, 28
Bellman–Ford algorithm, 87, 103, 108
bipartite matching, 26
burstiness, 29

coding subgraph, 9
coding vector, 28
coding vector, global, 15
Completely Opportunistic Coding (COPE) protocol, 60, 129
compression, distributed, 34
congestion control, 8
convolutional network coding, 31
correlated sources, 34
cyclic networks, 30

delay-free network coding, 14
distributed random linear coding
  vector space approach, 29, 146
distributed random linear network coding
  coding vector approach, 28

Edmonds matrix, 26
encoding vector
  auxiliary, 70
  global, 68
erasure code, 5

Fano matroid, 53
fractional coding problem formulation, 51

generation, 27
generic linear network code, 134
Gilbert–Varshamov Bound, generalized, 138
graph, 9
Grassmann graph, 30

Hamming Bound, generalized, 133
hyperarc, 5, 8
hypergraph, 8

information exchange, 60
information inequalities, 56
integrality gap, Steiner tree, 20
inter-session network coding, 49

q-Johnson scheme, 30

line graph, 28, 30
linear network code
  generic, 134
link, 9

matroidal network, 52
max flow/min cut, 17, 49, 79, 82, 87
  multicast, 18
  networks with cycles/delays, 33
minimum entropy decoding, 35
mobile ad hoc network (MANET), 12
multicast, 3
multicast network code construction, 21
  polynomial-time, 21
  random, 23, 28
multicommodity flow, 97
multiple-source multicast, 19
multiple-unicast networks, 58
