Index

aggregation 73
aggregation/decomposition method 74
aggregation/disaggregation method 75–76
autocorrelation 49
Bayes theorem 119
bayesian stochastic dynamic programming 14
Bellman’s principle of optimality 9
Box–Jenkins model 112
cascade levels 83
chemical stratification 59
demand driven dynamic programming 14
deterministic models 9
disaggregation of operation policies 106
discrete differential dynamic programming 9, 74
dynamic programming 3–4, 15
dependent deterministic models 9
constraints 4
decision variable 4
moving backward 4
moving forward 4, 60–61
objective function 4, 7
recursive equation 4
stage 4
state transformation equation 4
state variable 4
ergodic processes 39
folded dynamic programming 14
forward dynamic programming 14
fuzzy dynamic programming 15
fuzzy stochastic dynamic programming 14
generation of data 103
gradient dynamic programming 77
hierarchical multilevel decomposition approach 75
incremental dynamic programming 4–6, 9, 16
convergence criteria 5–6, 27
trajectory (operational release) 4–5, 19, 22, 26
inflow sequences 49
irregular deterministic 49, 51
independence 49–50
Markov-I process 49–50
Markov-II process 49–50
iterative downstream-moving decomposition 84–86
iterative up-and-downstream-moving decomposition 86
iterative upstream-moving decomposition 91–94
lag-one Box–Jenkins standardized model 116
lag-one Markov chain 116
lag-one multivariate autoregressive model 116
least squares regression 103
linear programming 3
linear regression model 49
long-term operation 2
multiattribute utility function 119–120
multiattribute utility trade-off 118
multicriteria decision making 101
multilevel incremental dynamic programming 74
multiple regression analysis 6, 104, 107
multiple-reservoir system operation 73
composite reservoir model 94
decomposition method 78
implicit stochastic dynamic programming analysis 103
neural network 76
objective-space dynamic programming 60
operational policy 1
operation policy convergence 39
operational guidelines 3
operational mode switch system 112, 118
operations research 1
optimization 2
optimization models 2–3
optimization techniques 2
principal component analysis 76
real-time on-line operation 110
regression 45
regression coefficients 105, 107
regression dynamic programming 13–14
regression equation based operational rule 105
reservoirs 2
rule curve 3
INDEX

- salt concentration 59, 65
- salt concentration conservation 61
- salt in a reservoir 61
- sampling stochastic dynamic programming 11
- selective withdrawal 59
- sequential downstream moving decomposition 83–84, 89–91
- short-term operation 1
- simulation 2
- simulation models 3
- stability of (operation) policy 46
- statistical disaggregation 106–107
- stochastic dynamic programming 6–9
- algorithmic aspects 38
- backward algorithm 7
- convergence 8
- discretization 7
- explicit approach 6, 10
- implicit approach 6, 10
- joint transition probability 34
- Markov chain, Markov process 7, 38
- multiple reservoirs 32–38
- operation policy 9, 34, 38
- recursive equation 7, 32–33
- single reservoir operation 31–32
- state space 7
- steady-state policy 38
- transition probability 7, 32, 39
- stochastic models 9
- systems analysis 1
- systems engineering 1
- thermal stratification 59
- transition probability matrix 43, 116
- sensitivity 40
- uncertainty 31
- unconditional probability 114
- water quality 59
- zero-elements in transition probability matrices 39
