## 1 Water resources management
- 1.1 General 1
- 1.2 Role of reservoirs 2
- 1.3 Optimal reservoir operation 3
- 1.4 Conventional dynamic programming 4
- 1.5 Incremental dynamic programming 4
- 1.6 Stochastic dynamic programming 6
- 1.7 Dynamic programming in reservoir operations 9
- 1.8 Developments in dynamic programming 13

## 2 Incremental dynamic programming in optimal reservoir operation
- 2.1 IDP in optimal reservoir operation: single reservoir 16
- 2.2 IDP in optimal reservoir operation: multiple-reservoir system 23

## 3 Stochastic dynamic programming in optimal reservoir operation
- 3.1 SDP in optimal reservoir operation: single reservoir 31
- 3.2 SDP in optimal reservoir operation: multiple-reservoir system 32
- 3.3 Some algorithmic aspects of stochastic dynamic programming 38

## 4 Optimal reservoir operation for water quality
- 4.1 IDP based models in reservoir operation for quality 59
- 4.2 The Jarreh Reservoir in Iran 60
- 4.3 Application of the models to the Jarreh Reservoir 63

## 5 Large-scale reservoir system operation
- 5.1 Use of dynamic programming in multiple-reservoir operation 73
- 5.2 Decomposition method 78
- 5.3 Composite reservoir model formulation 94
- 5.4 Implicit stochastic dynamic programming analysis 103
- 5.5 Disaggregation/aggregation techniques based on dynamic programming 106

## 6 Optimal reservoir operation for flood control
- 6.1 Feitsui Reservoir Project in Taiwan 110
- 6.2 Operational mode switch system between long-term and short-term operation 112
- 6.3 Development of SDP model for long-term operation 112
- 6.4 Operational mode switch system 118
- 6.5 Application and sensitivity analysis 121
- 6.6 Some remarks on operational mode switch system 123
