<i>Preface to the Second Edition: What Stayed, What Went, What's New?</i>	<i>page xi</i>
<i>Acknowledgments</i>	<i>xiii</i>
1 Basic Concepts	1
1.0 Renewable, Nonrenewable, and Environmental Resources	1
1.1 Population Dynamics: Simulation, Steady State, and Local Stability	5
1.2 Extraction of a Nonrenewable Resource	10
1.3 Discounting	11
1.4 A Discrete-Time Extension of the Method of Lagrange Multipliers	17
1.5 Asymptotic Depletion of a Nonrenewable Resource	25
1.6 The Maximum Principle and Dynamic Programming in Discrete Time	26
1.7 Dynamic Programming in a Two-Period, Two-State Model	30
1.8 A Markov Decision Model and Stochastic Dynamic Programming	32
1.9 Exercises	34
2 Solving Numerical Allocation Problems Using Excel's Solver	41
2.0 Introduction and Overview	41

viii	<i>Contents</i>	
2.1	Optimal Rotation for an Even-Aged Forest	42
2.2	Solving an Implicit Equation for the Optimal Steady-State Fish Stock	45
2.3	Solving an Implicit Equation for the Optimal Date of Exhaustion	47
2.4	Optimal First-Period Harvest in a Two-Period, Two-State Model	47
2.5	The Optimal Linear Harvest Policy	50
2.6	Optimal Escapement in a Finite-Horizon Deterministic Model	52
2.7	Optimal Escapement for One Realization (Seed 1) of Z_{t+1}	53
2.8	An Optimal Depletion Problem: The Mine Manager's Problem	55
2.9	Approximating the Asymptotic Approach to a Bioeconomic Optimum	58
2.10	The Most Rapid Approach Path to an Optimal Pollution Stock	63
2.11	Optimal Escapement with Stochastic Growth	67
2.12	Exercises	69
3	The Economics of Fisheries	75
3.0	Introduction and Overview	75
3.1	Net Growth	76
3.2	Fishery Production Functions	79
3.3	The Yield-Effort Function	82
3.4	The Static Model of Open Access	84
3.5	The Dynamic Model of Open Access	85
3.6	Regulated Open Access	90
3.7	Maximization of Static Rent	95
3.8	Present-Value Maximization	97
3.9	Traditional Management Policies	102
3.10	Bioeconomic or Incentive-Based Management Policies	105
3.11	Marine Reserves	120
3.12	Exercises	126

Cambridge University Press

978-0-521-87495-3 - Resource Economics, Second Edition

Jon M. Conrad

Table of Contents

[More information](#)

<i>Contents</i>		ix
4	The Economics of Forestry	132
4.0	Introduction and Overview	132
4.1	The Volume Function and Mean Annual Increment	133
4.2	The Optimal Single Rotation	135
4.3	The Faustmann Rotation	136
4.4	An Example	139
4.5	Timber Supply	143
4.6	The Optimal Stock of Old-Growth Forest	146
4.7	Exercises	149
5	The Economics of Nonrenewable Resources	153
5.0	Introduction and Overview	153
5.1	A Simple Model	154
5.2	Hotelling's Rule	156
5.3	The Inverse Demand Curve	157
5.4	Extraction and Price Paths in the Competitive Industry	159
5.5	Extraction and Price Paths under Monopoly	164
5.6	Reserve-Dependent Costs	167
5.7	Exploration	171
5.8	The Economic Measure of Scarcity	176
5.9	A Postscript to "Betting the Planet"	195
5.10	Exercises	196
6	Stock Pollutants	200
6.0	Introduction and Overview	200
6.1	The Commodity-Residual Transformation Frontier	202
6.2	Damage Functions and Welfare	204
6.3	A Degradable Stock Pollutant	207
6.4	Diffusion and a Nondegradable Stock Pollutant	212
6.5	Optimal Extraction with a Nondegradable Waste	220
6.6	Climate Change	223
6.7	Emission Taxes and Marketable Pollution Permits	229
6.8	Exercises	238

x	<i>Contents</i>	
7	Maximin Utility with Renewable and Nonrenewable Resources	242
7.0	Introduction and Overview	242
7.1	The Maximin Criterion	244
7.2	The Gini Coefficient	246
7.3	Growth with Resources, Intergenerational Utility, and the Maximin Criterion	248
7.4	Overlapping Generations	255
7.5	Complications	261
7.6	An Exercise	262
	<i>Annotated Bibliography</i>	263
	<i>Index</i>	283
