<i>Preface</i>	<i>page ix</i>
Part I	1
1 Introduction and overview	3
1.1 What is nanotechnology?	3
1.2 Sizes of things	5
1.3 Important length scales: breaking a wire	7
1.4 The structure of this book	11
2 Solid state physics in a nutshell	15
2.1 Free electrons	16
2.2 Nearly free electrons	34
2.3 Chemical approaches to electronic structure	47
2.4 More modern electronic structure methods	54
2.5 Lattice dynamics: phonons	58
2.6 Summary and perspective	61
2.7 Suggested reading	62
Exercises	63
3 Bulk materials	66
3.1 Electronic types of solids	67
3.2 Metals	68
3.3 Inorganic semiconductors	72
3.4 Band insulators	84
3.5 Correlated oxides	87
3.6 Molecular structures	88
3.7 Summary and perspective	99
3.8 Suggested reading	100
Exercises	100
4 Fabrication and characterization at the nanoscale	104
4.1 Characterization	104
4.2 Materials growth	119

4.3	Material removal	129
4.4	Patterning	133
4.5	Summary	145
4.6	Suggested reading	146
	Exercises	147
5	Real solids: defects, interactions, confinement	151
5.1	Defects	151
5.2	Interfaces and surfaces	154
5.3	Screening	158
5.4	Excitons	166
5.5	Junctions between materials	168
5.6	Quantum wires	178
5.7	Quantum dots	181
5.8	Summary and perspectives	184
5.9	Suggested reading	185
	Exercises	186
	Part II	189
6	Charge transport and nanoelectronics	191
6.1	Transport terminology	191
6.2	Kinetic concepts	195
6.3	Hall effect	197
6.4	Quantum transport	203
6.5	The classical MOSFET	238
6.6	State-of-the-art	249
6.7	Beyond CMOS	259
6.8	Summary and perspective	291
6.9	Suggested reading	292
	Exercises	292
7	Magnetism and magnetoelectronics	298
7.1	Definitions and units	298
7.2	Magnetic order	303
7.3	Energy and magnetic configurations	309
7.4	Magnetism at small scales	317
7.5	Magnetic data storage and magnetoelectronics	338
7.6	The future: spintronics	346
7.7	Nanomagnetism: other applications	351
7.8	Summary and perspective	352
7.9	Further reading	354
	Exercises	354

Contents		vii
8	Photonics	357
8.1	Electromagnetic radiation in a nutshell	357
8.2	Lasers	384
8.3	A brief overview of optical communications	397
8.4	Photonic band gap systems	401
8.5	Nanophotonics: near-field optics	407
8.6	Nanophotonics: plasmonics	409
8.7	Summary	422
8.8	Suggested reading	423
	Exercises	424
9	Micro- and nanomechanics	429
9.1	Basics of solid continuum mechanics	429
9.2	Tribology	443
9.3	Microelectromechanical systems (MEMS)	448
9.4	Nanoelectromechanical systems	459
9.5	Summary	465
9.6	Suggested reading	466
	Exercises	466
10	Micro- and nanofluidics	469
10.1	Basic fluid mechanics	469
10.2	A digression: dimensional analysis	471
10.3	Laminar flow	475
10.4	Surface interactions	483
10.5	Electrolytes	486
10.6	Microfluidic devices	493
10.7	Nanofluidics	503
10.8	Summary	510
10.9	Suggested reading	511
	Exercises	512
11	Bionanotechnology: a very brief overview	516
11.1	Basic elements and tools of bionano	516
11.2	Leveraging biology	526
11.3	Nanotechnology and biosensing	534
11.4	Frontiers	538
11.5	Summary	539
11.6	Suggested reading	540
	Exercises	540
12	Nanotechnology and the future	543
12.1	Nanotechnology and energy	543
12.2	Dangers of nanotechnology?	556

12.3	Prognosis	560
12.4	Summary	561
12.5	Suggested reading	561
Appendix	Common quantum mechanics and statistical mechanics results	563
A.1	A review of perturbation theory	563
A.2	The vector potential	569
A.3	The Einstein relation	570
